Foreword by George A. Baitzell	v
Preface	vii
1. Introduction	1
General Bibliography	6
2. History	8
Solar Symposia	13
Solar Energy Society	18
References	19
3. Solar Radiation	20
Variations in Solar Radiation	21
Measuring Instruments	30
Geographical Distribution of Radiation	36
Kinds of Solar Radiation Records	44
References	46
✓ 4. Collectors of Solar Radiation	50
Flat-Plate Collectors	51
Focusing Collectors	57
Mountings for Focusing Collectors	69
Properties of Materials	78
General Considerations	85
References	86
✓ 5. Cooking	89
Boiling in Kettles	90
Baking in Ovens	92
Field Tests	93
Construction of a Simple Solar Cooker	95
Heat Storage	100
References	102

6. Heating Water
 - Types of Solar Water Heaters
 - Simple Solar Water Heater
 - ✓Boiling Water
 - References
7. Agricultural and Industrial Drying
 - Other Solar Drying
 - General Considerations
 - References
8. Storage of Heat
 - Storage by Heat Capacity
 - Physical Chemical Storage of Heat
 - Two-Vessel Systems
 - Water Ponds
 - References
9. Heating Buildings
 - Kinds of Solar Space-Heating Systems
 - Requirements for Solar House Heating
 - Tests of Solar Heating
 - Architectural Problems
 - Heat Pumps
 - Small Solar-Heated Units
 - References
10. Distillation of Water
 - Glass-Roofed Stills
 - Plastic Stills
 - Stills with Wicks
 - External Condensation
 - Theoretical Considerations
 - Economic Considerations
 - Water from the Air
 - References
11. Solar Furnaces
 - Design and Construction
 - Solar Furnace Installations
 - Physical and Chemical Operations
 - References

	Experimental Work	209
	Theoretical Studies	219
	Particulate Coatings	221
	Conclusions	222
	References	223
13.	Cooling and Refrigeration	225
	Absorption-Desorption Cooling	227
	Refrigeration	232
	Air Conditioning	238
	References	244
14.	Heat Engines	246
	Uses of Solar Heat Engines	248
	Principles of Solar Engines	254
	Steam Engines	256
	Hot-Air Engines	260
	Vapor Engines	266
	Economic Considerations	269
	References	271
15.	Thermoelectric and Thermoionic Conversion	273
	Principles	275
	Thermoelectric Generators	280
	Thermoionic Converters	283
	References	284
16.	Photovoltaic Conversion	286
	Principles	287
	Silicon Photovoltaic Cells	291
	Other Photovoltaic Cells	293
	Improvements in Photovoltaic Cells	295
	Photovoltaic Electrodes in Solution	296
	References	297
17.	Photochemical Conversion	299
	Principles of Photochemistry	301
	Photosynthesis	306
	Photochemical Production of Electricity	315
	Photochemical Storage of Energy	318
	Photochemical Reactions	322

References	327
18. Storage and Transportation of Power	330
Mechanical Storage of Power	330
Electrical Storage of Power	332
Fuel Cells	335
Hydrogen Fuel	342
Economics of Power Storage	347
References	349
19. Conclusions	351
References	361
Appendix	363
Conversion Factors (U.S. Units)	363
Index	367

Tables

1. Quantities of Solar Energy Received by Different Areas	22
2. Solar Radiation Per Day on a Horizontal Surface	40
3. Physical Properties of Plastic Films	81
4. Heat Conductivity of Construction Materials	139
5. Comparison of Heat-Storage Systems	141
6. Outdoor Winter Conditions in St. Paul, Minnesota	153
7. Distribution of Solar Energy in Glass-Roofed Still	173
8. Performance of Glass-Roofed Still	174
9. Annual Cost of Lifting Water	250
10. Solar Cell Materials and Best Efficiencies	294
