

Contents

Chapter 1. History of Applications

1.0	Introduction	1
1.1	The Seventeenth Century	2
1.2	The Eighteenth Century	3
1.3	The Nineteenth Century	3
1.4	The Twentieth Century	9
1.5	Solar Motors in Western America	15
1.6	Post-World War II (1945–1965)	25
1.7	Sources of Information	35

PART 1. THE ENERGY RESOURCE 37

Chapter 2. Solar Flux and Weather Data 39

2.0	Introduction	39
2.1	The Solar Constant	40
2.2	The Spectrum of the Sun	41
2.3	Diurnal Variation of Direct Sunlight	44
2.4	Height Variation of Direct Sunlight	46
2.5	Standard Atmosphere Zenith Distance Flux Variation	47
2.6	Ground-Scattered Solar Flux	48
2.7	Summary of Zenith Solar Flux	49
2.8	Geographical Distribution of Sunshine	50
2.9	Solar Flux Variability from Weather	55
2.10	Solar Flux Observation Instrumentation	56
2.11	Pyranometer	56
2.12	Shading-Ring Pyranometer	57
2.13	Pyrheliometer	57
2.14	Moving Shadow-Bar Pyrheliometer	59
2.15	Sunshine Recorder	60
2.16	Diurnal Variations of Sunlight	61
2.17	Correlations between Direct and Total Insolation	61
2.18	Solar Flux Variation Dynamics	71

2.19	Correlation of Sunshine with Wind Velocity	77
2.20	Environmental Thermal Infrared Flux	79
2.21	ETIR Model	83
2.22	Problems	84
Chapter 3. Solar Availability		87
3.0	Introduction	87
3.1	Zenith Distance versus Time	88
3.2	Time of Sunrise and Sunset	89
3.3	Fully Tracking Collector	90
3.4	Variation of Flux Curves with Latitude and Geometry	92
3.5	Fixed Horizontal Flat Plate	93
3.6	Fixed Latitude Tilted Flat Plate	94
3.7	Fixed Latitude, Plus 15°, Tilted Flat Plate	96
3.8	Vertical South-Facing Fixed Flat Plate	97
3.9	Seasonally Tilted Flat Plate	99
3.10	North-South Horizontal, East-West Tracking	101
3.11	North-South Polar, East-West Tracking	102
3.12	East-West Horizontal, North-South Tracking	104
3.13	Comparison of Theoretical Curves with Observations	106
3.14	Comparison of Daily Outputs	107
3.15	Peak Flux versus Average Flux	111
3.16	Problems	114
PART 2. THE OPTICS OF SOLAR COLLECTION		117
Chapter 4. Luminance of Collector Optics		119
4.0	Introduction	119
4.1	Definitions	120
4.2	Luminance Imagery	122
4.3	Solid Angle of Scattered Radiation	124
4.4	Luminance in an Optical Image	126
4.5	Interpretation of System Luminance	131
4.6	Problems	135
Chapter 5. Refractive Collector Optics		136
5.0	Introduction	136
5.1	Refraction of Light	136
5.2	Lenses	137

Contents

5.3	Ray-Tracing Procedures	138
5.4	Fresnel Lenses	140
5.5	Cylindrical Lenses	141
5.6	Water-Filled Pipe Collector	141
5.7	Off-Axis Longitudinal ϕ -Aberrations	144
5.8	Off-Axis Lateral θ -Aberrations	146
5.9	Fresnel Cylindrical Lens Measurements	148
5.10	On-Axis Image Aberrations	149
5.11	Lomonsov Catadioptric Collector	150
5.12	Problems	152
Chapter 6. Mirror Collector Optics		154
6.0	Introduction	154
6.1	Plane Mirrors	154
6.2	Booster Mirrors	157
6.3	Axicon (Conical) Mirrors	161
6.4	AKS-Composite Axicon-Lens Collector	164
6.5	Spherical Mirrors	165
6.6	Spherical Aberration	167
6.7	Aspheric Mirrors	168
6.8	Parabolic Mirrors	170
6.9	Field Errors of Cylindrical Mirrors	172
6.10	Heliostat Paraboloids	174
6.11	Curved Heliostat Mirrors	176
6.12	Movable-Slat Cylindrical Collector	178
6.13	Veinberg Parabolic Collector	180
6.14	Fill Factor	183
6.15	Inflated Mirrors	185
6.16	Problems	188
Chapter 7. Fixed-Mirror Collectors		191
7.0	Introduction	191
7.1	The Field Lens Option	192
7.2	Length of Time Sun Is on Absorber	193
7.3	Cylindrical Imagery	194
7.4	Tabor Circular Cylinder	196
7.5	Cylindrical Approximation to a Parabolic Trough	198
7.6	Veinberg Fixed-Mirror Collector	199
7.7	Trombe-Meinel Cusp	204
7.8	Winston Parabolic Cusp	207

7.9	Comparison of Fixed-Mirror Designs	214
7.10	Optical Cavity Effects	218
7.11	Russell Fresnel Mirror	220
7.12	Hemispherical Bowl Fixed-Mirror Collector	223
7.13	Field-Lens Mirror Cusps	227
7.14	Problems	228
Chapter 8. Optical Surfaces		230
8.0	Introduction	230
8.1	Transmissive Optical Materials	230
8.2	Reflection Loss	231
8.3	Wavelength Variation of Transmission	234
8.4	Production Procedures	238
8.5	Surface Accuracy of Transmissive Substrates	238
8.6	Lifetime Characteristics	243
8.7	Reflective Optical Materials	244
8.8	Surface Accuracy of Reflective Substrates	246
8.9	Thermally Sagged Mirrors	248
8.10	Low-Reflectance Coatings	249
8.11	Infrared Reflectance Coatings	252
8.12	Bare Metal Reflectances	252
8.13	Chemical Reflective Coatings	253
8.14	Vacuum Reflective Coatings	254
8.15	Mirror Protective Overcoatings	255
8.16	Optically Shaped Surfaces	259
8.17	Problems	260
PART 3. ABSORPTION, TRANSFER, AND STORAGE		261
Chapter 9. Selective Surfaces		263
9.0	Introduction	263
9.1	Limiting Behavior	265
9.2	Distorted-Wavelength Graphs	267
9.3	Metal Reflectances	268
9.4	Temperature Limits of Materials	270
9.5	Emittance of Metal Surfaces	270
9.6	Directional Variation of Emittance	272
9.7	Normal versus Hemispherical Emittance	275
9.8	Measurement of Wavelength Dependence	275
9.9	High-Temperature Reflectance Measurements	276

Contents

9.10	Direct Measurement of Absorptance and Emittance	279
9.11	Basic Modes of Obtaining Selectivity	281
9.12	Intrinsic Materials	281
9.13	Tandem Stacks	284
9.14	Inverse Tandem Stacks	291
9.15	Interference Stacks	292
9.16	Basic Physics of a Multilayer Stack	294
9.17	Typical Interference Stacks	295
9.18	Wavefront-Discriminating Materials	303
9.19	Effects of Surface Roughness	304
9.20	Dispersion of Metals in Metals	304
9.21	Selectivity by Quantum Size Effects	305
9.22	Reflective Surface Agglomeration	307
9.23	Diffusion of Ions	308
9.24	Lifetime Testing of Coatings	310
9.25	Selectivity	314
9.26	Problems	315
Chapter 10. Basic Elements of Heat Transfer		316
10.0	Introduction	316
10.1	Modes of Heat Transfer	316
10.2	Radiation	317
10.3	Conduction	320
10.4	Convection	322
10.5	Dimensional Analysis	325
10.6	Parallel Surfaces	330
10.7	Variation of Convective Loss with Surface Separation	333
10.8	Variation of Convective Loss with Temperature	334
10.9	Variation of Convective Loss with Gas Species	335
10.10	Variation with Separation for Other Gases	340
10.11	Variation of Convective Loss with Pressure	342
10.12	Forced Convection and Wind Loss	344
10.13	Convective Self-Flow Thermosiphon	348
10.14	Heat Transfer to Liquids	351
10.15	Problems	357
Chapter 11. Heat Transfer in Solar Collectors		359
11.0	Introduction	359
11.1	Heat Losses in a Distributed Collector System	359
11.2	The Liquid Transfer Module System	360

11.3	Solar Heat Availability	362
11.4	Fluid Mechanics	364
11.5	Fluid Properties	366
11.6	Temperature Rise	367
11.7	Solar Flux	368
11.8	Pressure Drop	369
11.9	L/D Ratios	369
11.10	Reynolds Number	370
11.11	Ratio of Power Expended to Power Generated	371
11.12	Magnitude of Power Output/Input Ratio	374
11.13	Parametric Relationships for Fluid Transfer	374
11.14	Variation of Output/Input Ratio with Solar Flux	374
11.15	Air-Transfer Systems	378
11.16	Air Heat Transfer in Terms of Volume Rate of Flow	381
11.17	Typical Evaluation Situation	384
11.18	Alternative Forms of the Heat-Rise Equation	386
11.19	Effect of Changing Heat-Transfer Fluid	387
11.20	Heat Transfer in Evacuated Collectors	387
11.21	Thermodynamic Utilization of Collected Energy	394
11.22	Evacuated Collector Tradeoffs	399
11.23	Linear Absorber with Air	400
11.24	Radiation Suppression Using Honeycombs	402
11.25	Convection Suppression Using Honeycombs	404
11.26	Heat Pipes	406
11.27	Heat Transfer along Thin Sheets	407
11.28	Differential Thermal Expansion	409
11.29	Problems	411
Chapter 12. Flat-Plate Collectors		413
12.0	Introduction	413
12.1	Basic Collector Configurations	413
12.2	Diurnal Temperature Profile	416
12.3	Thermal Inertia	417
12.4	U -Factor	418
12.5	Collector Heat Balances	418
12.6	Sample Calculation	422
12.7	Surface Temperatures	426
12.8	Efficiency-versus-Temperature Curves	426
12.9	General Properties of an η -versus- ΔT Curve	428
12.10	The Bare Collector	429
12.11	Single-Window Collector	432

12.12	Double-Window Collector	432
12.13	Improvement of Performance	433
12.14	Geometrical Suppression of Convection	434
12.15	Window Temperatures	434
12.16	Effect of Selective Absorber Surfaces	435
12.17	Selective Windows	437
12.18	Facing Selective Surfaces	438
12.19	Combination of Absorber and Selective Windows	440
12.20	Comparison of Thermal Behavior for Selective Windows	443
12.21	Window Absorption	444
12.22	Nonreflection Coated Windows	445
12.23	Variation of Efficiency with Solar Flux	445
12.24	Evacuated Collectors	450
12.25	Radiative Cooling	451
12.26	Selective Radiative Cooling	454
12.27	Cylindrical Collector Structures	455
12.28	Flat-Plate Collector Performance	457
12.29	Solar Ponds	457
12.30	Problems	459
Chapter 13. Energy Storage		461
13.0	Introduction	461
13.1	Basic System Diagram	461
13.2	Peaking Effect of Backup Demands	463
13.3	Energy Storage	463
13.4	Hydrostorage	464
13.5	Chemical Batteries	465
13.6	Flywheels	466
13.7	Chemical Storage	466
13.8	Compressed Air	467
13.9	Biological Storage	467
13.10	Thermal Storage	467
13.11	Sensible-Heat Storage	468
13.12	Latent-Heat Storage	470
13.13	Salt Eutectics	471
13.14	Zoned Thermal Storage Fluid Tank	473
13.15	Rock Thermal Storage Tank	474
13.16	Thermal Storage Tank Farm	475
13.17	Heat Management with and without Phase Change	476
13.18	Thermal Inertia	479
13.19	Calculation of Detailed Performance	481
13.20	Problems	484

PART 4 UTILIZATION AND APPLICATIONS	487
Chapter 14. Thermodynamic Utilization Cycles	489
14.0 Introduction	489
14.1 Rankine Cycle	489
14.2 Brayton Cycle	490
14.3 Stirling Cycle	491
14.4 Ericsson Cycle	493
14.5 Hot-Water Rankine Cycles	494
14.6 Direct Injection of Water	494
14.7 Dual-Fluid Rankine Cycle	494
14.8 Phase Change in the Collector	498
14.9 Expansion Boiler plus Reheat	499
14.10 Single Expansion to a Wet Condition	500
14.11 Multiple Reheats and Expansions	508
14.12 Brayton Cycle Solar Configurations	508
14.13 Limits to System Efficiency	511
14.14 Heat Rejection from Thermodynamic Cycles	514
14.15 Environmental Impact Factors	515
14.16 Community Heating and Cooling Systems	518
14.17 Solar Water Pumping	519
14.18 Solar Gas-Absorption Refrigeration	521
14.19 MEC Cooling System	522
14.20 Two-Stage Evaporative Cooling	524
14.21 Problems	524
Chapter 15. Direct Conversion to Electricity	526
15.0 Introduction	526
15.1 Direct Conversion by Means of Solar Cells	527
15.2 Silicon Cells	528
15.3 Manufacture of Silicon Cells	533
15.4 EFG Ribbon Silicon	535
15.5 Polycrystalline Silicon Cells	536
15.6 Cadmium Sulfide Solar Cells	536
15.7 Manufacture of Cadmium Sulfide Cells	539
15.8 Gallium Arsenide Solar Cells	540
15.9 Thermal Behavior of Solar Cells	540
15.10 Cooled Solar Cells for Concentrating Systems	543
15.11 Thermoelectric Solar Cells	545
15.12 Thermionic Solar Cells	548

Contents

15.13	Phase-Change Thermal Direct Conversion	549
15.14	Problems	550
Chapter 16. A Survey of Applications		553
16.0	Introduction	553
16.1	Water Distillation	554
16.2	Hot-Water Heating	556
16.3	Swimming-Pool Heating	559
16.4	Crop Drying	562
16.5	The Bioconversion Woodlot	564
16.6	House Heating	566
16.7	Gas-Absorption Cooling	568
16.8	Night Radiation Cooling	569
16.9	Evaporative Cooling	571
16.10	Water Pumping	572
16.11	Electric Power Generation	574
16.12	Photovoltaic Power	576
16.13	Community-Scale Total Energy Systems	576
16.14	Community Heating and Cooling	580
16.15	Industrial Process Heat	582
16.16	Cost Limits	584
16.17	Solar Collector Costs	587
16.18	Dependence of Cost on Unit Size	594
16.19	Energy Cost Stability	595
16.20	Cost Effectiveness of Improvements	596
16.21	Problems	600
Concluding Remarks		603
Appendixes		605
A	Conversion of Units	607
B	Useful Solar Flux Quantities	609
C	Maximum Annual Collector Performance	610
D	Comparative Daily Collector Performance	611
E	Radiation and Convection Fluxes for Heat Balance Calculations	613
F	Collector Heat Balance Computation Sheet	614
G	Conversion of Centigrade to Fahrenheit	615
H	Blackbody Flux	616
I	Radiative Flux Intensities	617
J	Solar Furnace Radiative Flux Temperatures	617
