Preface	xi
Preface to the Second Edition	xiii
Preface to the First Edition	xvii

PART I FUNDAMENTALS 1

1 Solar Radiation 3

1.1	The Sun	3
1.2	The Solar Constant	5
1.3	Spectral Distribution of Extraterrestrial Radiation	6
1.4	Variation of Extraterrestrial Radiation	7
1.5	Definitions	10
1.6	Direction of Beam Radiation	12
1.7	Angles for Tracking Surfaces	20
1.8	Ratio of Beam Radiation on Tilted Surface to That on Horizontal Surface	23
1.9	Shading	29
1.10	Extraterrestrial Radiation on a Horizontal Surface	37
1.11	Summary	41
	References	41

2 Available Solar Radiation 43

2.1	Definitions	43
2.2	Pyrheliometers and Pyrheliometric Scales	44
2.3	Pyranometers	48
2.4	Measurement of Duration of Sunshine	53
2.5	Solar Radiation Data	54
2.6	Atmospheric Attenuation of Solar Radiation	60
2.7	Estimation of Average Solar Radiation	64
2.8	Estimation of Clear-Sky Radiation	68
2.9	Distribution of Clear and Cloudy Days and Hours	72
2.10	Beam and Diffuse Components of Hourly Radiation	75
2.11	Beam and Diffuse Components of Daily Radiation	77

2.12	Beam and Diffuse Components of Monthly Radiation	79
2.13	Estimation of Hourly Radiation from Daily Data	81
2.14	Radiation on Sloped Surfaces	85
2.15	Radiation on Sloped Surfaces: Isotropic Sky	90
2.16	Radiation on Sloped Surfaces: Anisotropic Sky	91
2.17	Radiation Augmentation	97
2.18	Beam Radiation on Moving Surfaces	101
2.19	Average Radiation on Sloped Surfaces: Isotropic Sky	103
2.20	Average Radiation on Sloped Surfaces: KT Method	105
2.21	Effects of Receiving Surface Orientation on \bar{H}_T	113
2.22	Utilizability	116
2.23	Generalized Utilizability	119
2.24	Daily Utilizability	127
2.25	Summary	133
	References	134

3 Selected Heat Transfer Topics 139

3.1	Electromagnetic Spectrum	139
3.2	Photon Radiation	140
3.3	The Blackbody: Perfect Absorber and Emitter	140
3.4	Planck's Law and Wien's Displacement Law	141
3.5	Stefan-Boltzmann Equation	142
3.6	Radiation Tables	143
3.7	Radiation Intensity and Flux	145
3.8	Infrared Radiation Exchange between Gray Surfaces	147
3.9	Sky Radiation	148
3.10	Radiation Heat Transfer Coefficient	149
3.11	Natural Convection between Flat Parallel Plates and between Concentric Cylinders	150
3.12	Convection Suppression	155
3.13	Vee-Corrugated Enclosures	159

3.14	Heat Transfer Relations for Internal Flow	159
3.15	Wind Convection Coefficients	164
3.16	Heat Transfer and Pressure Drop in Packed Beds and Perforated Plates	166
3.17	Effectiveness-NTU Calculations for Heat Exchangers	169
	References	171

4 Radiation Characteristics of Opaque Materials 174

4.1	Absorptance and Emittance	175
4.2	Kirchhoff's Law	177
4.3	Reflectance of Surfaces	178
4.4	Relationships among Absorptance, Emittance, and Reflectance	182
4.5	Broadband Emittance and Absorptance	183
4.6	Calculation of Emittance and Absorptance	184
4.7	Measurement of Surface Radiation Properties	187
4.8	Selective Surfaces	189
4.9	Mechanisms of Selectivity	193
4.10	Optimum Properties	197
4.11	Angular Dependence of Solar Absorptance	197
4.12	Absorptance of Cavity Receivers	198
4.13	Specularly Reflecting Surfaces	199
	References	201

5 Radiation Transmission through Glazing: Absorbed Radiation 204

5.1	Reflection of Radiation	204
5.2	Absorption by Glazing	208
5.3	Optical Properties of Cover Systems	208
5.4	Transmittance for Diffuse Radiation	213
5.5	Transmittance-Absorptance Product	215
5.6	Angular Dependence of $(\tau\alpha)$	216
5.7	Spectral Dependence of Transmittance	216
5.8	Effects of Surface Layers on Transmittance	219
5.9	Absorbed Solar Radiation	221
5.10	Monthly Average Absorbed Radiation	224
5.11	Absorptance of Rooms	231
5.12	Absorptance of Photovoltaic Cells	232
5.13	Summary	236
	References	236

6 Flat-Plate Collectors 238

6.1	Description of Flat-Plate Collectors	238
6.2	Basic Flat-Plate Energy Balance Equation	239
6.3	Temperature Distributions in Flat-Plate Collectors	240
6.4	Collector Overall Heat Loss Coefficient	242
6.5	Temperature Distribution between Tubes and the Collector Efficiency Factor	256
6.6	Temperature Distribution in Flow Direction	262
6.7	Collector Heat Removal Factor and Flow Factor	264
6.8	Critical Radiation Level	268
6.9	Mean Fluid and Plate Temperatures	269
6.10	Effective Transmittance-Absorptance Product	270
6.11	Effects of Dust and Shading	273
6.12	Heat Capacity Effects in Flat-Plate Collectors	274
6.13	Liquid Heater Plate Geometries	277
6.14	Air Heaters	282
6.15	Measurements of Collector Performance	289
6.16	Collector Characterizations	290
6.17	Collector Tests: Efficiency, Incidence Angle Modifier, and Time Constant	291
6.18	Test Data	301
6.19	Thermal Test Data Conversion	303
6.20	Flow Rate Corrections to $F_R(\tau\alpha)_n$ and $F_R U_L$	307
6.21	Flow Distribution in Collectors	310
6.22	In Situ Collector Performance	311
6.23	Practical Considerations for Flat-Plate Collectors	312
6.24	Putting It All Together	315
6.25	Summary	320
	References	321

7 Concentrating Collectors 324

7.1	Collector Configurations	325
7.2	Concentration Ratio	327
7.3	Thermal Performance of Concentrating Collectors	329
7.4	Optical Performance of Concentrating Collectors	336
7.5	Cylindrical Absorber Arrays	338
7.6	Optical Characteristics of Nonimaging Concentrators	340

7.7	Orientation and Absorbed Energy for CPC Collectors	347	10.3	Duct and Pipe Loss Factors	429
7.8	Performance of CPC Collectors	352	10.4	Controls	432
7.9	Linear Imaging Concentrators: Geometry	353	10.5	Collector Arrays: Series Connections	434
7.10	Images Formed by Perfect Linear Concentrators	357	10.6	Performance of Partially Shaded Collectors	436
7.11	Images from Imperfect Linear Concentrators	362	10.7	Series Arrays with Sections having Different Orientations	438
7.12	Ray-Trace Methods for Evaluating Concentrators	364	10.8	Use of Modified Collector Equations	441
7.13	Incidence Angle Modifiers and Energy Balances	364	10.9	System Models	444
7.14	Paraboloidal Concentrators	370	10.10	Solar Fraction and Solar Savings Fraction	447
7.15	Central-Receiver Collectors	371	10.11	Summary	448
7.16	Practical Considerations	372		References	449
	References	373			

8 Energy Storage 376

8.1	Process Loads and Solar Collector Outputs	376
8.2	Energy Storage in Solar Process Systems	378
8.3	Water Storage	379
8.4	Stratification in Storage Tanks	382
8.5	Packed-Bed Storage	387
8.6	Storage Walls	395
8.7	Seasonal Storage	397
8.8	Phase Change Energy Storage	399
8.9	Chemical Energy Storage	404
8.10	Battery Storage	405
	References	409

9 Solar Process Loads 412

9.1	Examples of Time-Dependent Loads	413
9.2	Hot-Water Loads	414
9.3	Space Heating Loads, Degree-Days, and Balance Temperature	415
9.4	Building Loss Coefficients	418
9.5	Building Energy Storage Capacity	420
9.6	Cooling Loads	420
9.7	Swimming Pool Heating Loads	421
	References	423

10 System Thermal Calculations 425

10.1	Component Models	425
10.2	Collector Heat Exchanger Factor	427

11 Solar Process Economics 450

11.1	Costs of Solar Process Systems	450
11.2	Design Variables	453
11.3	Economic Figures of Merit	454
11.4	Discounting and Inflation	457
11.5	Present-Worth Factor	459
11.6	Life-Cycle Savings Method	462
11.7	Evaluation of Other Economic Indicators	467
11.8	The P_1, P_2 Method	470
11.9	Uncertainties in Economic Analyses	475
11.10	Economic Analysis Using Solar Savings Fraction	478
11.11	Summary	479
	References	479

PART II APPLICATIONS 481

12 Solar Water Heating: Active and Passive 483

12.1	Water Heating Systems	483
12.2	Freezing, Boiling, and Scaling	487
12.3	Auxiliary Energy	490
12.4	Forced-Circulation Systems	492
12.5	Low-Flow Pumped Systems	494
12.6	Natural-Circulation Systems	495
12.7	Integral Collector Storage Systems	498
12.8	Retrofit Water Heaters	500
12.9	Water Heating in Space Heating and Cooling Systems	501
12.10	Testing and Rating of Solar Water Heaters	501
12.11	Economics of Solar Water Heating	503

viii Contents

12.12	Swimming Pool Heating	506
12.13	Summary	507
	References	507

13 Building Heating: Active 509

13.1	Historical Notes	510
13.2	Solar Heating Systems	511
13.3	CSU House III Flat-Plate Liquid System	515
13.4	CSU House II Air System	517
13.5	Heating System Parametric Study	521
13.6	Solar Energy–Heat Pump Systems	525
13.7	Phase Change Storage Systems	531
13.8	Seasonal Energy Storage Systems	534
13.9	Solar and Off-Peak Electric Systems	537
13.10	Solar System Overheating	539
13.11	Solar Heating Economics	540
13.12	Architectural Considerations	543
	References	545

14 Building Heating: Passive and Hybrid Methods 548

14.1	Concepts of Passive Heating	549
14.2	Comfort Criteria and Heating Loads	550
14.3	Movable Insulation and Controls	550
14.4	Shading: Overhangs and Wingwalls	551
14.5	Direct-Gain Systems	556
14.6	Collector-Storage Walls and Roofs	561
14.7	Sunspaces	565
14.8	Active Collection–Passive Storage Hybrid Systems	566
14.9	Other Hybrid Systems	569
14.10	Passive Applications	569
14.11	Heat Distribution in Passive Buildings	575
14.12	Costs and Economics of Passive Heating	575
	References	577

15 Solar Cooling 579

15.1	Solar Absorption Cooling	580
15.2	Theory of Absorption Cooling	582
15.3	Combined Solar Heating and Cooling	587
15.4	Simulation Study of Solar Air Conditioning	589
15.5	Operating Experience with Solar Cooling	593
15.6	Applications of Solar Absorption Air Conditioning	595

15.7	Solar Desiccant Cooling	596
15.8	Ventilation and Recirculation Desiccant Cycles	598
15.9	Solar-Mechanical Cooling	600
15.10	Solar-Related Air Conditioning	603
15.11	Passive Cooling	605
	References	605

16 Solar Industrial Process Heat 608

16.1	Integration with Industrial Processes	608
16.2	Mechanical Design Considerations	609
16.3	Economics of Industrial Process Heat	610
16.4	Open-Circuit Air Heating Applications	611
16.5	Recirculating Air System Applications	614
16.6	Once-Through Industrial Water Heating	618
16.7	Recirculating Industrial Water Heating	618
16.8	Shallow-Pond Water Heaters	621
16.9	Summary	623
	References	623

17 Solar Thermal Power Systems 625

17.1	Thermal Conversion Systems	625
17.2	Gila Bend Pumping System	626
17.3	Luz Systems	628
17.4	Central-Receiver Systems	632
17.5	Solar One and Solar Two Power Plants	634
	References	637

18 Solar Ponds: Evaporative Processes 639

18.1	Salt-Gradient Solar Ponds	639
18.2	Pond Theory	641
18.3	Applications of Ponds	643
18.4	Solar Distillation	644
18.5	Evaporation	650
18.6	Direct Solar Drying	651
18.7	Summary	652
	References	652

PART III DESIGN METHODS 655**19 Simulations in Solar Process Design 657**

19.1	Simulation Programs	657
19.2	Utility of Simulations	658

19.3	Information from Simulations	659
19.4	TRNSYS: Thermal Process Simulation Program	660
19.5	Simulations and Experiments	667
19.6	Meteorological Data	667
19.7	Limitations of Simulations	670
	References	671

20 Design of Active Systems: f -Chart 672

20.1	Review of Design Methods	672
20.2	The f -Chart Method	673
20.3	The f -Chart for Liquid Systems	677
20.4	The f -Chart for Air Systems	683
20.5	Service Water Heating Systems	687
20.6	The f -Chart Results	689
20.7	Parallel Solar Energy-Heat Pump Systems	691
20.8	Summary	693
	References	694

21 Design of Active Systems by Utilizability Methods 696

21.1	Hourly Utilizability	697
21.2	Daily Utilizability	700
21.3	The ϕ , f -Chart Method	703
21.4	Summary	713
	References	714

22 Design of Passive and Hybrid Heating Systems 715

22.1	Approaches to Passive Design	715
22.2	Solar-Load Ratio Method	716
22.3	Unutilizability Design Method: Direct Gain	724
22.4	Unutilizability Design Method: Collector-Storage Walls	731
22.5	Hybrid Systems: Active Collection with Passive Storage	739
22.6	Other Hybrid Systems	745
	References	745

23 Design of Photovoltaic Systems 747

23.1	Photovoltaic Converters	748
23.2	PV Generator Characteristics and Models	749

23.3	Cell Temperature	759
23.4	Load Characteristics and Direct-Coupled Systems	761
23.5	Controls and Maximum Power Point Trackers	764
23.6	Applications	766
23.7	Design Procedures	767
23.8	High-Flux PV Generators	773
23.9	Summary	773
	References	774

24 Wind Energy 776

24.1	Introduction	776
24.2	Wind Resource	780
24.3	One-Dimensional Wind Turbine Model	788
24.4	Estimating Wind Turbine Average Power and Energy Production	793
24.5	Summary	798
	References	798

APPENDIXES 800

A Problems 800

B Nomenclature 840

C International System of Units 845

D Monthly R_b as Function of ϕ and $\phi - \beta$ 847

E Properties of Materials 855

F Present-Worth Factors 860

G Meteorological Data 864

H Solar Position Diagrams 871

I Average Shading Factors for Overhangs 877

Index	893
