## PART 1. THE WASTE MATERIALS OF ATOMIC ENERGY

1.1. FISSION AND FISSION PRODUCTS	<i>G. N. Walton</i>
Discovery of fission .....	3
Cause of fission .....	4
Fission neutrons .....	7
Fission energy .....	9
Distribution in mass .....	13
Distribution of charge in fission .....	16
Fission product chains .....	17
Radioactivity of the fission products .....	32
Calculation of amounts, activities and heat formed .....	41
Fission product poisoning of reactors .....	93
1.2. ALPHA EMITTERS IN REACTOR WASTES	<i>H. A. C. McKay</i>
Alpha emitters concerned .....	99
✓ Maximum permissible concentrations .....	100
Hazards arising in $^{235}\text{U}$ .....	101
Hazards arising in natural uranium .....	103
Hazards arising in enriched uranium .....	107
Hazards arising in $^{239}\text{Pu}$ .....	107
Summary and general comments .....	107

## PART 2. EFFECTS OF RADIATION ON MATERIALS AND LIVING ORGANISMS

2.1. PHYSICAL AND CHEMICAL EFFECTS OF RADIATIONS	<i>W. G. Burns</i>
Mainly physical effects .....	111
Chemical effects: water and aqueous solutions .....	120
Chemical effects: organic solutions .....	132
Conclusion .....	147
2.2. EFFECTS OF RADIATION ON LIVING CELLS	<i>T. C. Carter</i>
Organization of living matter .....	150
Somatic effects of radiations .....	155
Genetic effects of radiations .....	159
2.3. MOVEMENT OF RADIOACTIVE SUBSTANCES IN FOOD CHAINS	<i>R. Scott Russell</i>
Aquatic food chains .....	164
Food chains on dry land .....	166
$^{90}\text{Sr}$ -Ca relationships in total diet .....	169
Mitigation of hazards due to contamination of agricultural land .....	170

## CONTENTS

2.4. RADIATION PROTECTION—A PROBLEM IN OCCUPATIONAL AND PUBLIC HEALTH	<i>H. J. Dunster</i>
General introduction .....	173
Occupational health problems .....	176

### PART 3. LEGAL ASPECTS OF ATOMIC ENERGY WASTE DISPOSAL

3.1. LEGAL ASPECTS OF ATOMIC ENERGY WASTE DISPOSAL	<i>R. H. Burns</i>
The position in Great Britain .....	187
Legislation in the United States .....	190
Other countries .....	193
Transport of radioactive materials .....	193

### PART 4. OPERATIONS INVOLVED IN THE TREATMENT OF RADIOACTIVE WASTE

4.1. SURVEY OF TREATMENTS CONSIDERED FOR LOW-ACTIVITY WASTES	<i>C. B. Amphlett and D. C. Sammon</i>
Chemical methods .....	205
Ion exchange .....	216
Evaporation .....	225
Treatment of sludges .....	226
Decontamination by biological methods .....	227
Sea disposal .....	229
Disposal of liquid waste into rivers .....	231
Ground disposal .....	232
4.2. LOW-ACTIVITY TREATMENT IN LARGE-SCALE PRACTICE	<i>C. B. Amphlett and D. C. Sammon</i>
Waste disposal in Chalk River, Canada .....	241
Waste disposal at Oak Ridge National Laboratory .....	243
Disposal of low-activity wastes at Hanford .....	247
Waste disposal at A.E.R.E., Harwell .....	250
Further development of processes for the treatment of low-activity wastes at Harwell .....	252
4.3. WASTE TREATMENTS AT SOME HIGH-ACTIVITY PROCESSING PLANTS	<i>K. Saddington</i>
Introduction .....	257
Classification of effluent arisings .....	257
The reactors .....	258
Fuel processing plants .....	260
Miscellaneous arisings .....	264
Effluent treatment .....	264
Conclusions .....	279
4.4. CONVERSION OF HIGHLY ACTIVE WASTES TO SOLID PRODUCTS	<i>C. B. Amphlett</i>
Methods based on ion exchange .....	284
Fusion at relatively low temperatures .....	287

## CONTENTS

Calcination to oxides .....	288
Conversion to glass or ceramic products .....	293
Preparation of well characterized glasses .....	299
Self-fixation of highly active wastes .....	302
Transport and storage of solid products .....	305
4.5. DISPERSION OF ACTIVITY FROM CHIMNEY STACKS	<i>A. C. Chamberlain</i>
Introduction .....	308
Factors restricting aerial effluent .....	308
Diffusion from stacks .....	310
Maximum concentration at ground level, .....	316
Time-mean concentration .....	318
Application of results to specific radioactive gases .....	318
Summary of permissible emissions .....	322
4.6. SEPARATION OF INDIVIDUAL FISSION PRODUCTS	<i>T. V. Healy</i>
Introduction .....	324
Fission product raffinates .....	324
Caesium and strontium removal from highly active wastes .....	327
Separation of fission products for use .....	334
Handling highly active fission product solutions .....	346

## PART 5. FISSION PRODUCTS AS SOURCES OF RADIATION

5.1. FISSION PRODUCTS AS SOURCES OF RADIATION	<i>S. Jefferson, F. Rogers and G. S. Murray</i>
Introduction .....	351
Reactor core radiation .....	352
Indirect reactor radiation .....	353
Gross fission products .....	354
Isolated fission products .....	357
Cobalt-60 sources .....	358
Design of irradiation units using 'packaged' sources .....	359

## PART 6. USES OF RADIATION IN RESEARCH AND AGRICULTURE

6.1. AGRICULTURAL RESEARCH	<i>D. Roy Davies and R. Scott Russell</i>
Mutation breeding .....	373
Fertilizer studies .....	376
Conclusion .....	378
6.2. FOOD PRESERVATION	<i>F. J. Ley and P. B. Cornwell</i>
Elimination of micro-organisms .....	380
Eradication of parasites in meat .....	383
Control of insect pests .....	383
Inhibition of sprouting in stored root crops .....	386
General considerations .....	386
6.3. INDUSTRIALLY IMPORTANT CHEMICAL REACTIONS INDUCED BY RADIATION	<i>R. Roberts</i>
Economics of radiation processing .....	388

## CONTENTS

Effect of radiation on plastics and elastomers.....	388
Use of recoiling fission fragments in chemical synthesis .....	395
Use of fission product gases .....	396
Effect of radiation on hydrocarbons.....	396
Radiation initiated polymerization .....	396
Polymerization in the solid state.....	398
Polymerization of polyesters .....	399
Radiation-initiated graft copolymerization .....	400
Halogenation .....	403
Sulphochlorination .....	405
Oxidation of hydrocarbons .....	406
Sulphoxidation of hydrocarbons .....	407
Effect of radiation on catalysts.....	407

GLOSSARY.....

SUBJECT INDEX .
