

CONTENTS

Preface	vii
1. The department of energy program for long-term isolation of radioactive waste	1
2. WIPP: a bedded salt repository for defense radioactive waste in southeastern New Mexico	13
3. Hydrologic considerations related to management of radioactive waste	37
4. Disposal of radioactive waste in granitic bedrock	47
5. Leaching of fully radioactive high-level waste glass and waste-geologic environment interaction studies	75
6. Single-pass leaching of nuclear melt glass by groundwater	93
7. Method for determining leach rates of simulated radioactive waste forms	115
8. Ceramic forms for nuclear waste	129
9. A field study of radionuclide migration	149
10. Nuclide migration in fractured or porous rock	167
11. Kinetic effects in migration	191
12. Sorption behavior of trivalent actinides and rare earths on clay minerals	201
13. Studies of actinide sorption on selected geologic materials	215
14. Biogeochemistry of actinides : a nuclear fuel cycle perspective	241
15. Radionuclide sorption studies on abyssal red clays	267
16. Consequences of radiation from sorbed transplutonium elements on clays selected for waste isolation	291
17. Ion-exchange equilibria between montmorillonite and solutions of moderate-to-high ionic strength	297
Index	325
