

CONTENTS

Publisher's Note	vii
Preface	ix
1. INTRODUCTION AND SUMMARY	1
1.1. Energy Supply and Demand, Past and Present	3
1.2. Projection	12
1.3 Summary and Conclusions	14
References	43
2. BACKGROUND FOR ASSESSMENT OF NEW ENERGY TECHNOLOGY	44
2.1. Energy Transportation	44
2.2. Sulfur Dioxide Pollution Control	67
2.3. Thermal Pollution Control	81
2.4. Energy Storage	87
References	100
3. FOSSIL FUEL-TO-FUEL CONVERSION	103
3.1. Pipeline Gas from Coal	103
3.2. Minimum-Cost (Low-Btu) Clean Gas from Coal	144
3.3. Oil from Coal	161
3.4. Oil from Tar Sands and Oil Shale	186
3.5. Comparison of Proposed Fossil Fuel-to-Fuel Conversions	209
References	222
4. NUCLEAR POWER	228
4.1. Introduction	228
4.2. Nuclear-Fuel Reserves	229
4.3. Present Technology	231
4.4. Breeder Reactor Technology	244
4.5. Nuclear Fusion	261
References	262

5. CENTRAL-STATION POWER FROM FOSSIL FUEL	263
5.1. Introduction	263
5.2. Improved Gas Turbine and Mixed Heat-Engine Cycles	263
5.3. Magnetohydrodynamics	283
5.4. Superconducting Electric Generators	289
5.5. Fuel Cells for Central-Station Power	290
References	294
6. UTILIZATION-RELATED ENERGY PROBLEMS	296
6.1. Automotive Power Plants	296
6.2. Space Heating and Cooling	321
References	330
7. SPECIAL ENERGY CONVERSION SYSTEMS OF SECONDARY IMPORTANCE	331
7.1. Introduction	331
7.2. Solar Energy Utilization	331
References	351
Index	353
