FOREWORD

PREFACE

THE BEHAVIOR OF GASES

Characteristics of a Gas	1
The Gas Laws	3
Kinetic Theory	6
Mean Free Path	7
Dalton's Law of Partial Pressures	8
Change of Phase	9
Evaporation, Condensation, Equilibrium and Vapor Pressure	9
Gas Flow	11
The Effects of Evacuating a Vessel	20
Pumpdown Time	22

2. THE COMPONENTS OF A VACUUM SYSTEM 24

Vacuum Pumps	26
Baffles	46
Traps	47
Vacuum Gages	50
Vacuum Measurements	61
Valves	61
Connecting Lines	66
Ports, Lead-Ins, and Motion Seals	68

3. TECHNIQUES AND PROCEDURES 74

Performance Characteristics of a Vacuum System	74
Processes using Vacuum	75
Typical High-Vacuum System (The Bell-Jar Evaporator)	77

4. ULTRAHIGH VACUUM

- Gas Leakage
- Outgassing
- Backstreaming
- Pumping Speed

5. PROPERTIES OF MATERIALS USED IN VACUUM SYSTEMS

- Elemental Materials and Alloys
- Ceramics
- Plastics
- Hydrocarbons

GLOSSARY

APPENDIXES

- Appendix A: The Metric System
- Appendix B: Temperature Scales
- Appendix C: Degassing-Rate Reports
- Appendix D: Exponents and Scientific Notation
- Appendix E: Molecular Weight and Mean Free Path of Some Gases
- Appendix F: Organic Diffusion-Pump Fluids
- Appendix G: Vacuum Lubricants
- Appendix H: Cements and Adhesives
- Appendix I: Soldering and Brazing
- Appendix J: Vapor Pressure Data for the Solid and Liquid Elements
- Appendix K: The Mass-Spectrometer Leak Detector
- Appendix L: Bakeable Ultrahigh Vacuum Flange Gaskets
- Appendix M: O-Ring Flange Table
- Appendix N: Ultrahigh Vacuum Welding
- Appendix O: Vacuum References

INDEX
