

Contents

<i>Preface</i>	v
<i>Introduction</i>	xi
Part 1 Vacuum-line Manipulations	
<i>Chapter 1. General Design and Function of the Vacuum Line</i>	3
Arrangement of Components	3
The Transfer of Condensable Gases	7
Trap-to-trap Fractionation	8
Pressure-volume-temperature Measurement of Gases	10
Low-temperature Baths	11
Vapor Pressure as a Characteristic Property	13
The Transfer of Noncondensable Gases	14
General References	15
<i>Chapter 2. Pumps for the Attainment of Rough Vacuum, High Vacuum, and Gas Circulation</i>	16
Rough-vacuum Systems	16
Rotary Oil-sealed Pumps	17
Diffusion Pumps	19
Cold Traps	22
Arrangement of Pumping Components	23
Limitation of Pumping Speed by the Apparatus	24
Gas Circulation	25
General References	26
<i>Chapter 3. Pressure Measurements</i>	27
Medium- and High-vacuum Gauges	27
Leak Detection	31

Routine Manometry	33
Highly Accurate Manometry	37
Mercury, General Properties	40
Cleaning Mercury	42
Bourdon Gauges	43
General References	46
<i>Chapter 4. Joints, Stopcocks, and Valves</i>	47
Joints	47
Stopcocks and Valves	52
<i>Chapter 5. Specialized Equipment and Operations</i>	58
Tensimeters	58
Tensimetric Titration	61
Vapor Pressures above Room Temperature	63
Measurement of Low Temperatures	65
Molecular-weight Determinations	70
Melting Points	74
Sealed-tube Reactions	76
Analysis	79
Gas Chromatography	83
Low-temperature Fractional Distillation	90
Cells for Vibrational and Electronic Spectroscopy	92
NMR and ESR Samples	98
Sampling Alkali Metals	98
Vacuum-line Filtration	100
Storage of Gases and Solvents	102
<i>Chapter 6. Metal Vacuum Systems</i>	105
Materials of Construction	105
Tubing Joints	108
Flange Joints	110
Mechanical and Electrical Feed Throughs	111
Valves	111
Pressure Measurements	126
Reaction and Storage Vessels	130
Spectroscopic Cells	130
Typical Systems	135
General References	137
Part 2 Inert-atmosphere Techniques	139
<i>Chapter 7. Bench-top Techniques</i>	141
General	141
Bench-top Inert-atmosphere Glassware	142

Schlenk-type Glassware	145
Syringe Techniques	154
Hot-tube Preparations	158
Molecular-weight Determination	159
Other Techniques	162
<i>Chapter 8. Inert Atmosphere Glove Boxes</i>	164
General	164
Attainment of Inert Atmosphere	166
Contamination of the Dry-box Atmosphere	169
Maintenance of Inert Atmosphere	176
Typical Glove-box Systems	182
Some Common Glove-box Operations	187
General References	189
Commercial Sources of Inert Atmosphere Equipment	189
<i>Chapter 9. Inert Gases and Their Purification</i>	190
Inert Gases	190
Some General Principles	191
Purification of Helium by Low-temperature Adsorption	192
Water Removal	193
The Removal of Oxygen	195
Detection of Moisture and Oxygen	202
General References	205
<i>Appendix I. Explosion and Fire Hazards</i>	207
Combustibles	207
Unstable Compounds	208
Some Dangerous Mixtures	208
Disposal of Reactive Wastes	209
Extinguishing Fires	210
General References	210
<i>Appendix II. Glass and Glassblowing</i>	211
Properties of Glasses	211
Equipment and Materials	214
Sequence of Operations	216
Annealing	217
Cutting Glass Tubing	218
Bending Glass Tubing	219
Test-tube Ends and Fire Cutoffs	219
End-to-end Seals	221
T-seals	222
Ring Seals	223

Closed Circuits	225
Metal-to-glass Seals	225
Healing Cracks	226
Sealing Tubing under Vacuum	227
General References	228
<i>Appendix III. Plastics and Elastomers</i>	229
Plastics: General Properties and Fabrication	230
Cellular Plastics	235
Properties of Specific Plastics	236
Elastomers	242
Properties of Specific Elastomers	242
General References	245
<i>Appendix IV. Metals</i>	246
Fabrication of Apparatus from Seamless Tubing	248
Properties of Specific Metals	249
General References	254
<i>Appendix V. Vapor Pressures of Pure Substances</i>	255
Analytical and Graphical Representation of Vapor-pressure Data	255
Correlation and Estimation of Vapor Pressures	261
Sources of Vapor-pressure Data	263
Table of Vapor Pressures	265
<i>Index</i>	291
