

TABLE OF CONTENTS

PREFACE	9
Members of the Working Party and others who assisted in the preparation of this document	10
0. INTRODUCTION	
THE PRINCIPLES AND CYCLES OF COLD PRODUCTION	17
1.1. <i>What does it mean to produce cold?</i>	
1.2. <i>How does one produce cold?</i>	17
1.21. Dissolution of certain salts in water	17
1.22. Fusion of a solid body	17
1.23. Evaporation of a liquid	18
1.24. Sublimation of a solid	18
1.25. Expansion of a compressed gas, such as air	18
1.26. The Ranque effect	19
1.27. The Peltier effect	19
1.3. <i>Cold producing processes employing the effect of the evaporation of a liquid</i>	19
1.31. Evaporation of a liquid in an open circuit	19
1.32. Evaporation of a refrigerant in a closed system	20
1.4. <i>Compression refrigerating machines</i>	21
1.41. Single-stage compression machines	22
1.411. Diagramme and description of such a machine	22
1.412. Variations in the characteristics of a single stage compression refrigerating machine as a function of operating conditions	22
1.413. Variations in the compression ratio	25
1.42. Two-stage compression machines	27
1.43. Cascade refrigerating machines	28
1.5. <i>Refrigerant fluids</i>	29
1.51. Thermodynamic criteria	29
1.52. Safety criteria	30
1.53. Physico-chemical criteria	30
1.54. Economic criteria	32
1.6. <i>Liquefiable fluid refrigerating machines which require heat energy</i>	32
1.61. Absorption machines	33
1.611. Operating principle	33
1.612. Diagramme and description of an absorption machine	34
1.613. The refrigerant-absorbant pairs	35
1.614. Domestic absorption refrigerating machines	35
1.62. Ejection refrigeration machines	35
1.7. <i>Refrigeration and solar energy</i>	36
1.71. Possible geographic zones where solar energy can be used	36
1.72. Producing refrigeration with the aid of solar energy	36
1.8. <i>Producing refrigeration by earth radiation.</i>	38

2. HEAT TRANSFER INSULATION

- 2.1. *The elements of heat transfer*
 - 2.11. Radiation
 - 2.12. Conduction
 - 2.13. Convection
 - 2.14. The simultaneous occurrence of the 3 modes of heat transfer
 - 2.15. Heat exchangers
- 2.2. *Thermal insulation of walls*
 - 2.21. Generalities — Calculating insulation
 - 2.211. Heat transfer through insulation
 - 2.212. Water vapour diffusion through an insulant
 - 2.213. Calculating the insulation
 - 2.22. Materials used in insulation
 - 2.221. Cork
 - 2.222. Glass fibre
 - 2.223. Foam polystyrene
 - 2.224. Other insulants
 - 2.225. Moisture (vapour) barriers
 - 2.23. Installation of insulation
 - 2.231. General remarks
 - 2.232. Insulation of floors
 - 2.233. Insulation of vertical walls
 - 2.234. Insulation of ceilings
 - 2.235. Special processes
 - 2.236. Insulation joinery
 - 2.237. Insulation of pipework

Annexes

3. ELEMENTS OF THE TECHNOLOGY OF REFRIGERATING MACHINERY

- 3.1. *Conception of refrigerating installations*
 - 3.11. Methods of distributing refrigeration
 - 3.12. Centralised and decentralised installations
 - 3.13. General recommendations
- 3.2. *Organic study of the various components of a mechanical compression refrigerating machine*
 - 3.21. Compressors and compressor units
 - 3.211. Volumetric compressors
 - 3.212. Non-volumetric compressors
 - 3.213. Compressor units
 - 3.214. Motive energy for compressors
 - 3.22. Condensers
 - 3.221. Water-cooled condensers
 - 3.222. Water-cooling towers
 - 3.223. Evaporative condensers

3.224. General considerations relative to the use of water in condensers destined for operation in warm countries	80
3.225. Air-cooled condensers	81
3.23. Evaporators	82
3.231. Operating conditions	82
3.232. Liquid cooling evaporators	84
3.233. Air-cooled evaporators	85
3.234. Contact evaporators	88
3.235. Frost formation on air cooling evaporators	88
3.24. Automation and safety	90

4. REFRIGERATION OF FOODSTUFFS. 93

4.1. <i>Reasons for using refrigeration</i>	94
4.2. <i>Methods of preservation of perishable foodstuffs by refrigeration</i>	94
4.21. Action of low temperatures on foodstuffs	94
4.211. Cooling or "chilling"	94
4.212. Freezing	95
4.213. Freeze-drying	96
4.22. Optimum conditions for the refrigerated storage of perishable produce	96
4.221. Temperature and relative humidity	96
4.222. Odours	96
4.223. Condensation of water vapour on the produce	96
4.23. Remarks on the application of these methods in tropical countries	97
4.3. <i>Some special features of the refrigerated treatment of perishable foodstuffs</i>	98
4.31. Meat	98
4.311. Location of abattoirs	98
4.312. Installations for the cooling of meat	99
4.313. Recommended conditions for the storage of chilled meat	100
4.314. Installations for freezing meat	100
4.315. Transport of chilled or frozen meat	102
4.316. Meat processing industries	103
4.317. Collection of organs intended for therapeutic purposes	103
4.32. Fish	103
4.321. Preliminary observations	103
4.322. Cooling of fish	103
4.323. Freezing of fish and marine produce	103
4.33. Milk and dairy produce	105
4.331. Preliminary observations	105
4.332. Cooling of milk at the point of production	106
4.333. Milk for direct consumption	108
4.334. Refrigeration and the manufacture of butter	108
4.335. Refrigeration and the manufacture of cheese	110
4.336. Ice cream	110
4.34. Other products of animal origin	111
4.341. Poultry	111
4.342. Eggs	111
4.35. Fruits and vegetables	111
