1

Introduction 1

1 The design flow diagram 2 / 2 Design analysis 8 / 3 Factor of safety 8 / 4 Reliability 11 / 5 Cost 13 / 6 Safety 14 / 7 Closure 15 / References 16

2

Metallurgical Properties of Engineering Materials 17

1 Brittle and ductile fracture 17 / 2 Improving the strength of materials 18 / 3 The iron-carbon diagram 19 / 4 Wrought iron 22 / 5 Cast iron 24 / 6 Heat treatment of steels 31 / 7 Isothermal transformation diagrams 34 / 8 Hardenability 39 / 9 Heat treatment definitions 45 / 10 Supplementary metallurgical terms 53 / 11 Alloying elements in steel and their functions 54 / 12 Classification of steels 55 / 13 AISI-SAE designations for wrought steel 65 / 14 Wrought aluminum alloys 67 / 15 Aluminum casting alloys 71 / 16 Copper and copper alloys 71 / 17 Magnesium alloys 72 / 18 Nickel and nickel alloys 73 / 19 Plastics 74 / 20 Elastomers 76 / Problems 78 / References 79 •

3

Mechanical Properties of Engineering Materials 80

1 Mechanical properties of materials 81 / 2 Homogeneity 81 / 3 Elasticity 81 / 4 Isotropy 81 / 5 Plasticity 82 / 6 Tensile strength 82 / 7 Stress 83 / 8 Strain 83 / 9 Fracture strength 84 / 10 Proportional limit 84 / 11 Elastic limit 84 / 12 Proof stress 84 / 13 Yield point 85 / 14 Modulus of elasticity 87 / 15 Hooke's law 88 / 16 Direct shear strength 88 / 17 Shear yield point 89 / 18 Ductility 90 / 19 Malleability 91 / 20 Modulus of resilience 92 / 21 Modulus of toughness 92 / 22 Hardness 94 / 23 Endurance strength 100 / 24 Endurance limit 102 / Effects of material variation—reliability factor 109 / 26 Influence of size—size factor 110 / 27 Effects of methods of manufacture—surface finish factor 111 / 28 Effect of stress concentration 113 / 29 A working equation for the endurance limit 119 / 30 Effect of some important nonquantitative factors 120 / 31 Creep 134 / 32 Other temperature sensitive properties of materials 135 / 33 Wear 138 / 34 Radiation effects 139 / Problems 140 / References 145

4

Manufacturing Processes and Design 147

1 Introduction 148 / 2 Primary processes 148 / 3 Forming of plastics 167 / 4 Welding 171 / 5 Secondary production processes 181 / 6 Engineering drawings and dimensions 189 / 7 Definitions of dimensioning terms 190 / ...

8 Classes of fits 193 / 9 Selecting tolerances 196 / 10 Vague and superfluous dimensions 203 / 11 Accumulation and nonaccumulation of tolerances 204 / 12 Tolerance stackup 205 / 13 Statistical determination of tolerance 205 / 14 Geometric dimensioning and tolerancing 207 / 15 Surface quality 208 / 16 Design hints 212 / Problems 231 / References 234

5

Analysis of Stress and Displacement 235

1 The analytical model 236 / 2 The relationship between “exact theory” and the “strength of materials” approach 236 / 3 The nature of stress and strain 237 / 4 Bending stresses in machine members 242 / 5 Deflection of machine members due to bending 250 / 6 Shear stress and shear deflection due to lateral load—shear center 260 / 7 Torsion 265 / 8 Thermal stress 274 / 9 Energy methods—Castigliano’s theorem 278 / 10 Elastic stability 281 / 11 Numerical methods 290 / Problems 294 / References 299

6

Theories of Failure Used in the Design of Machine Elements 301

1 Stress at a point and combined stress 302 / 2 The maximum normal stress theory 306 / 3 The maximum shear theory 309 / 4 Strain energy and the distortion energy theory 312 / 5 Fatigue failure and the Soderberg criterion 314 / 6 Cumulative damage 325 / Problems 326 / References 329

7

Shafts, Keys, and Couplings 331

1 Shaft materials 333 / 2 Bending moments and torque acting on a shaft 334 / 3 Shaft design subjected to fluctuating loads based on the maximum shear theory of failure 338 / 4 Design of shafts subjected to fluctuating loads based on the distortion energy theory of failure 340 / 5 Comparison of maximum shear and distortion energy theories of failures as applied to shaft design 340 / 6 Shaft design equations for fluctuating and shock loads 341 / 7 Shaft diameter for example 7-1 342 / 8 Shaft deflection for example 7-1 345 / 9 Shaft design by computer 353 / 10 Critical speed of shafts 357 / 11 Torsional stiffness 358 / 12 Torsion of shafts of various cross sections 359 / 13 Keys 361 / 14 Splines 373 / 15 Couplings 378 / 16 Universal joints 390 / 17 Flexible shafting 395 / Problems 396 / References 404

8

Journal Bearings and Lubrication 405

1 Introduction 406 / 2 Types of journal bearings 407 / 3 Newton’s law of viscous flow (viscosity) 409 / 4 Hagan–Poiseuille law (flow through capillary tube) 411 / 5 Viscosity measuring devices 414 / 6 Temperature effect on viscosity 415 / 7 Petroff’s law 418 / 8 Hydrostatic lubrication 419
