

CONTENTS

PREFACE	xiii
1. INTRODUCTION	1
A. General Notions	1
B. Characteristic Features of Fine Mechanisms and Precision Instruments	2
(a) <i>Small Dimensions and High Precision</i>	2
(b) <i>Influence of Production Engineering upon Design</i>	3
(c) <i>Influence of Material Problems upon Design of Fine Mechanisms and Precision Instruments</i>	3
(d) <i>Strength Problems in Fine Mechanisms and Precision Instruments</i>	4
C. Classification of Fine Mechanisms and Precision Instruments	4
D. Metals used in Fine Mechanisms and Precision Instruments	6
(a) <i>General Requirements</i>	6
(b) <i>Metals Most Often Used in Fine Mechanisms and Precision Instruments</i>	6
E. Plastics	12
(a) <i>Thermoplastics</i>	12
(b) <i>Hardening Plastics</i>	13
F. Ceramic Materials	14
(a) <i>Insulating Ceramics</i>	14
(b) <i>Capacitor Ceramics</i>	14
(c) <i>Porous Ceramics</i>	15
REFERENCES	15
2. HOUSINGS AND FRAMES	17
A. Housings	17
(a) <i>Protection from Harmful Influence of the Surroundings</i>	17
(b) <i>Protection of Mechanisms (Apparatus) from Damage Caused by Unauthorized Persons</i>	20
(c) <i>Protection from Electric Current</i>	20
(d) <i>Aesthetic Appearance</i>	22
(e) <i>Damping of Vibrations and Noise</i>	24
(f) <i>Explosion-proofing</i>	24
(g) <i>Tropicalization and Protection from the Corrosive Influence of Oceanic Climate</i>	24
(h) <i>Light Weight</i>	25
(i) <i>Good Accessibility of Controls</i>	25
(j) <i>Easy Assembling</i>	25
(k) <i>Low Cost</i>	26
B. Housing Types	27
C. Frames	29
(a) <i>Mechanism Frames</i>	30
(b) <i>Frames of Electrical and Electronic Apparatus</i>	32
REFERENCES	34

CONTENTS

3. PERMANENT JOINTS	36
A. Joints Involving Permanent Deformation of Elements	36
(a) <i>Joining Sheet Metal by Tangs</i>	36
(b) <i>Joining Tubes by Rolling</i>	37
(c) <i>Joining by Crimping</i>	38
(d) <i>Joining by Centre Punching</i>	39
(e) <i>Joining by Curling</i>	39
(f) <i>Joining by Rivets</i>	39
B. Soldered and Brazed Joints	42
(a) <i>Soldering</i>	42
(b) <i>Brazing</i>	43
C. Gas, Arc and Resistance Welded Joints	45
(a) <i>Gas and Arc Welded Joints</i>	45
(b) <i>Resistance Welded Joints</i>	46
D. Glued Joints	51
(a) <i>Protein Glues</i>	51
(b) <i>Natural Resin Adhesives</i>	51
(c) <i>Elastomer Adhesives</i>	52
(d) <i>Inorganic Adhesives</i>	52
(e) <i>Synthetic Resin Adhesives</i>	52
E. Cemented Joints	54
(a) <i>Cements Hardening Owing to Physical Transformation</i>	54
(b) <i>Chemically Binding Cements</i>	54
(c) <i>Principles of Obtaining Cemented Joints</i>	54
(d) <i>Disadvantages of Cemented Joints</i>	55
F. Joints by Mould Insertion or Hot Insertion	55
G. Compression and Ultrasonic Joints	56
REFERENCES	57
4. DETACHABLE JOINTS	58
I. PRESS FIT JOINTS	58
A. Cylindrical Friction Joints	58
(a) <i>Phenomena Accompanying Press Fit Joints</i>	59
(b) <i>Factors Influencing the Pressing-in and Drifting Force Values</i>	60
(c) <i>Calculation of Cylindrical Friction Joints</i>	62
(d) <i>Recommended Fits and Interference Values</i>	68
(e) <i>Examples of Cylindrical Friction Joints</i>	68
B. Profile Section Press Fit Joints	71
(a) <i>Joining Principle</i>	71
(b) <i>Advantages of the Profile Section Friction Joint</i>	71
(c) <i>Calculation of Strength of a Profile Section Friction Joint</i>	72
II. PINNED JOINTS	72
A. Cylindrical Pins	73
(a) <i>Pressed-in Dowel Pins</i>	73
(b) <i>Pin Keys</i>	73
B. Taper Pins	74
C. Grooved Pins	74
D. Elastic Pins	75
E. Tapped Pins	75
F. Extruded Studs	76
G. Calculation of Pin Joints	76
H. Design Hints	77

III. SCREW JOINTS	78
A. Thread Types	78
B. Design of Screw Joint Elements	80
C. Direct Screw Joints	83
D. Indirect Screw Joints	84
(a) <i>Screws</i>	84
(b) <i>Bolts</i>	86
(c) <i>Nuts</i>	86
(d) <i>Washers</i>	87
E. Screw Joint Locking Devices	88
(a) <i>Locking Devices</i>	90
(b) <i>Securing from Unscrewing by Unauthorized Persons</i>	93
(c) <i>Screw or Nut Loss Prevention</i>	94
F. Materials Used for Screw Fasteners	95
G. Protective Coating of Screw Fasteners, Pins, Rivets	
H. Heat Treatment of Screw Fasteners	
J. Diameters of Through Holes for Screws and Bolts	95
K. Tolerances of Screw and Bolt Hole Spacing	96
(a) <i>Spacing Tolerances for Two Holes</i>	96
(b) <i>Spacing Tolerances for Several Holes</i>	
(c) <i>The General Case of Dimensioning Two Holes</i>	98
(d) <i>Spacing Tolerances for Holes Spaced along Circle Periphery</i>	100
IV. BAYONET JOINTS	
A. Joints with Friction Safety Locks of Elastic Type	103
B. Joints with Friction Safety Locks of Wedge Type	103
C. Joints with Safety Lock of Profile Type	104
REFERENCES	105
5. ELASTIC ELEMENTS	106
A. Introduction	106
(a) <i>Rate of Elastic Element</i>	106
(b) <i>Energy Accumulated in Elastic Element</i>	106
(c) <i>Elastic Imperfection: Elastic Retardation, Relaxation and Elastic Hysteresis</i>	107
(d) <i>Influence of Temperature upon Elasticity of Material</i>	111
(e) <i>Classification of Elastic Elements</i>	114
B. Helical Springs	115
(a) <i>Compression Springs</i>	115
(b) <i>Tension Springs</i>	115
(c) <i>Torsion Springs</i>	117
(d) <i>General Rules for the Calculation of Helical Springs</i>	117
(e) <i>Calculation of Compression Springs</i>	119
(f) <i>Calculation of Tension Springs</i>	122
(g) <i>Dimensioning of Springs</i>	125
(h) <i>Overstretched Helical Springs, Compression and Tension Type</i>	126
(i) <i>Helical Torsion Springs</i>	126
(j) <i>Dimensioning of Torsion Springs</i>	129
C. Plate Springs	129
(a) <i>Bent Leaf Pressure Springs</i>	129
(b) <i>Calculation of Leaf Pressure Springs</i>	130
(c) <i>Contact Springs and Their Systems</i>	132
(d) <i>Calculation of Strength of Contact Springs</i>	134

(e) <i>Simple Support by Spring or Springs Situated in One Plane, Loaded by Transverse Force Only</i>	143
(f) <i>Suspension Support by One Flat Leaf Spring, Loaded Only by Moment Applied to its End</i>	145
(g) <i>Support by Crossed Springs</i>	146
(h) <i>Guiding by Leaf Springs</i>	150
(i) <i>Torsion Springs Used as Supports</i>	151
(j) <i>Torsional Suspension Springs</i>	153
(k) <i>Materials Used for Suspension Springs</i>	159
(l) <i>Membranes</i>	161
(m) <i>Advantages of Applying Spring Supports and Guides</i>	163
D. Spiral Leaf Springs	164
(a) <i>Calculation of Spiral Springs</i>	164
(b) <i>Spiral Hairsprings</i>	
(c) <i>Spiral Mainsprings</i>	
(d) <i>Materials Used for Springs</i>	
E. Thermostat Bimetal Elements	166
(a) <i>Calculation of Thermostat Bimetal Element Deflection under the Influence of Temperature Variation</i>	189
(b) <i>Stresses in Bimetal Elements</i>	196
(c) <i>Thermostat Bimetal Contact Springs Controlled by Heating with Electric Current</i>	199
(d) <i>Materials Used for Thermostat Bimetal Springs</i>	201
F. Pressure-controlled Elastic Elements	202
(a) <i>General Features of Pressure-controlled Elastic Elements</i>	203
(b) <i>Bourdon Tubes</i>	205
(c) <i>Membranes and Capsules</i>	209
(d) <i>Sylphon Bellows</i>	219
REFERENCES	221
6. SUPPORTS	224
A. Introduction	224
B. Cylindrical Sliding Supports, Machine Type	224
(a) <i>Moving Pivot Supports</i>	224
(b) <i>Stationary Pivot Supports</i>	226
C. Cylindrical Sliding Supports of the Clock Type	227
(a) <i>Direct Bearings in Mechanism Plates</i>	227
(b) <i>Mineral Bush (Jewel) Bearings Fitted into Mechanism Plates</i>	230
(c) <i>Friction Resistance of Clock Type Supports</i>	232
D. Bearing Bushes of Plastics and Sintered Metals	234
E. V-block Supports	235
F. Conical and Tapered Supports	239
(a) <i>Conical Supports Used in Fine Mechanisms</i>	239
(b) <i>Tapered Supports Used in Precision Instruments</i>	242
G. Spherical Supports	244
H. Hydrostatic Bearings	247
(a) <i>Thrust Bearings</i>	247
(b) <i>Radial Bearings</i>	249
(c) <i>Properties of Hydrostatic Bearings</i>	250
J. Centre Supports	252
(a) <i>Centre Support in Case of Force Acting along the Shaft</i>	253
(b) <i>Centre Support Loaded by an Axial Force and a Minor Radial Force</i>	256
(c) <i>Shaft Supported by Two Centre Bearings and Axially Loaded</i>	260
(d) <i>Centre Support in Case of a Force Acting Normally to Shaft Axis</i>	261

CONTENTS

ix

(e) <i>Influence of Vibrations upon Centre Bearing Wear</i>	274
(f) <i>Influence of Temperature upon Centre Supports</i>	274
K. Thrust Bearings (Cover Plate Type)	275
L. Wear of Plain Bearings Used in Fine Mechanisms at Low Speeds in Vibrationless Operating Conditions	278
M. Magnetic Supports	280
N. Mercury Supports	281
O. Lubrication of Slide Bearings	283
P. Knife-edge Supports	287
(a) <i>Calculation of Knife-edge Supports with Cylindrical or Flat Blocks</i>	287
(b) <i>Friction Couple of Knife-edge Bearing</i>	289
(c) <i>Design Solutions for Knife-edge Bearings</i>	292
R. Rolling Contact Bearings with Intermediate Rolling Elements	295
(a) <i>Accuracy and Clearance of Rolling Contact Bearing</i>	295
(b) <i>Friction in Rolling Contact Bearings</i>	298
(c) <i>Use of High-Precision Bearings</i>	301
(d) <i>Miniature and Sub-miniature Rolling Contact Bearings of the Cup-and-cone Type</i>	302
(e) <i>Wire Track Bearings</i>	308
(f) <i>Miniature and Sub-miniature Angular Contact Ball Bearings Without Cage and Inner Ring</i>	310
