Preface ix

Usual meaning of symbols xi

- 1 Application of hydrostatic bearings 1**
 - 1.1 Introduction 1
 - 1.2 What is a hydrostatic bearing? 1
 - 1.3 When should a hydrostatic bearing be employed? 6
 - 1.4 Bearing selection 9
 - 1.5 Materials selection 19

- 2 Basic theory governing pressure, flow and bearing forces 21**
 - 2.1 Viscosity 21
 - 2.2 Density: consistent units 23
 - 2.3 Compressibility 23
 - 2.4 Viscous flow between parallel plates 23
 - 2.5 Combined pressure and velocity-induced viscous flow in a two-dimensional non-parallel film 26
 - 2.6 Flow through restrictors 27
 - 2.7 Recess pressure and pressure ratio 29
 - 2.8 Bearing load 30
 - 2.9 Use of dimensionless data 33

- 3 Power, temperature rise and minimum power 35**
 - 3.1 Pumping power 35
 - 3.2 Friction power 35
 - 3.3 Total power and power ratio 36
 - 3.4 Temperature rise 37
 - 3.5 Optimization 38
 - 3.6 Minimum power for low-speed bearings ($K = 0$) 38
 - 3.7 Minimum power for high-speed recessed bearings 39
 - 3.8 Optimization of plain hybrid bearings 45

- 4 Thrust pads: load and flow rate 46**
 - 4.1 Derivation of load and flow data for plane thrust pads 46

- 4.2 Circular pad data 47
- 4.3 Square pad data 49
- 4.4 Rectangular pad data 51
- 4.5 Annular recess circular pad data 51
- 4.6 Conical pad data 54
- 4.7 Spherical pad data 58
- 4.8 Multi-recess circular pad data 60
- 4.9 Multi-recess rectangular pad data 62
- 4.10 Data for rectangular pad with radiussed recess corners
- 4.11 Data for any shape with thin constant land width 65
- 4.12 Annular multi-recess pad data 66
- 5 Circuit design, flow control, load and stiffness 69**
 - 5.1 Definition of bearing film stiffness 69
 - 5.2 Circuit design and sealing 71
 - 5.3 Load and stiffness of a capillary-controlled pad 73
 - 5.4 Flow control devices 76
 - 5.5 General stiffness law for a bearing pad 86
- 6 The basis of the design procedures and selection of tolerances**
 - 6.1 Zero or low-speed bearings 89
 - 6.2 Relationships affecting tolerances 91
 - 6.3 High-speed bearings 92
 - 6.4 BS 4500: Specification for ISO limits and fits 94
 - 6.5 Tolerance grades for hydrostatic bearings 94
- 7 Plane hydrostatic bearings 97**
 - 7.1 Use of the design charts 97
 - 7.2 Choice of land width 98
 - 7.3 Flow rate 98
 - 7.4 Load 99
 - 7.5 Stiffness 99
 - 7.6 Single plane bearings 99
 - 7.7 Double plane bearings having equal opposed pads 106
 - 7.8 Double plane bearings having unequal opposed pads 111
 - 7.9 Complex arrangements of plane pads (capillary compensators)
- 8 Partial hydrostatic journal bearings 122**
 - 8.1 Recessed partial journal bearings 122
 - 8.2 Grooved partial journal bearings 123
- 9 Recessed cylindrical hydrostatic journal bearings 132**
 - 9.1 Introduction 132
 - 9.2 Flow in hydrostatic journal bearings 134
 - 9.3 Load 138
 - 9.4 Power and temperature rise 142
 - 9.5 Land width ratios and design pressure ratio 143
 - 9.6 Selection of tolerances 143
 - 9.7 Selection of supply pressure, viscosity and clearance
 - 9.8 Bearing film stiffness 147

- 10 Hydrostatic and hybrid plain journal bearings 154**
 - 10.1 Introduction 154
 - 10.2 Selection of bearing configuration 155
 - 10.3 Power ratio 157
 - 10.4 Design pressure ratio 157
 - 10.5 Clearance and clearance limits 157
 - 10.6 Load 158
 - 10.7 Flow rate 162
 - 10.8 Power and temperature rise 163
- 11 Combined journal and thrust bearings (the Yates bearing) 167**
 - 11.1 Introduction 167
 - 11.2 Principle of operation 169
 - 11.3 Basic parameters 169
 - 11.4 Design procedure 171
- 12 Conical journal bearings 179**
 - 12.1 Introduction 179
 - 12.2 Basic parameters 181
 - 12.3 Design procedure 182
- 13 Spherical bearings 187**
 - 13.1 Introduction 187
 - 13.2 Basic parameters 188
 - 13.3 Central recess bearing 189
 - 13.4 Annular recess bearing 190
 - 13.5 Multi-recess bearings 191
- 14 Dynamics 195**
 - 14.1 Introduction 195
 - 14.2 Static loading 196
 - 14.3 Dynamic loading 196
 - 14.4 Squeeze damping 197
 - 14.5 Compressibility 199
 - 14.6 Dynamic model of a thrust pad
 - 14.7 Thrust pad with thin lands 202
 - 14.8 Journal bearings 205
- 15 Experimental methods and testing 215**
 - 15.1 Introduction 215
 - 15.2 Flat pad rig 216
 - 15.3 Cylindrical journal bearing rig 21
- Appendix A Design procedures and examples 223**
 - A1 Single plane pads 224
 - A2 Equal opposed pads 226
 - A3 Unequal opposed pads 228
 - A4 Journal bearings (general procedure) 230
 - A5 Complex arrangements of plane pads 232
 - A6 Capillary restrictor 234

viii Contents

A7 Orifice restrictor 234

A8 Slot restrictor (single and double entry) 235

Appendix B References and design bibliography 236

B1 References 236

B2 Design bibliography 237
