Flow Behaviour of Bulk Solids	1
1.1. Phenomena of gravity flow	1
1.2. Discharge rate	7
1.3. Classification	10
<u>2. Design Based on Flow Properties of Bulk Solids</u>	16
2.1. Design of mass flow bins	17
2.1.1. The shear cell test	18
2.1.2. Determination of necessary data of bulk materials	20
2.1.3. Critical hopper dimensions	24
2.1.4. Range of application	27
2.2. Design of core flow bins	29
2.2.1. Powdered materials	29
2.2.2. Coarse materials	33
3. Loads of Bins and Bunkers	42
3.1. Standards for load calculation	44
3.2. Limitations of the standards	49
3.3. Pressures in mass flow bins	52
4. Shapes of Bins and Bunkers	56
4.1. Capacity of storage	58
4.2. Determination of volume	62
4.3. Cross-section of bins	64
4.4. Shape of outlets and hoppers	65
4.4.1. Outlets in flat-bottom bins	
4.4.2. Hoppers	
4.4.3. Inserts	81

	<u>Page</u>
<u>5. Activated bins and E</u>	92
5.1. Liners	93
5.2. Flow inducers	96
5.2.1. Pneumatics	96
5.2.2. Vibrators	100
5.2.2.1. External vibrators	101
5.2.2.2. Vibrating plates	10
5.2.2.3. Suspended vibrating e	12
5.2.2.4. Vibrating hoppers	13
5.2.3. Mechanical dislodgers	17
<u>6. Feeding and Recovery</u>	119
6.1. Mechanical discharge arrangements	119
6.1.1. Feeder loads	120
6.1.2. Belt feeders	
6.1.3. Apron feeders	
6.1.3.1. Bar flight feeders	
6.1.3.2. Rotary drum, vane and valve feeders	
6.1.4. Rotary table feeders	141
6.1.4.1. Circular bin dischargers	144
6.1.4.2. Rotary plow feeders	147
6.1.5. Screw feeders	154
6.1.6. Reciprocating plate feeders	160
6.1.7. Vibratory feeders	161
6.1.7.1. Design types	164
6.1.7.2. Supports of trough feeders	169
6.1.7.3. Feeder flow patterns	171
6.1.8. Hopper gates	177
6.1.9. Conclusion	78
6.2. Aeration procedures	85

<u>Functions of Bins and Bunkers</u>	100
Homogenization of stored materials	193
Dewatering of stored materials	203
Bunker conveyors	205
<u>8. Treatment of Bulk Materials</u>	207
8.1. Segregation	208
8.1.1. Cause of segregation	209
8.1.2. Degree of segregation	212
8.1.3. Measures to reduce the degree of segregation	
8.2. Degradation	
8.3. Abrasion	226
<u>9. Control and Automatic Equipment</u>	231
9.1. Level measurement	231
9.1.1. Determination of material weight in the bin	234
9.1.2. Electromechanical sounding probes	234
9.1.3. Rotating paddle	234
9.1.4. Diaphragm-type level control	235
9.1.5. Electrical-resistance sensor	235
9.1.6. Level control by conductivity	236
9.1.7. Level control by capacitance	236
9.1.8. Level control with radioactive isotopes	237
9.1.9. Level control by ultrasonics	238
9.2. Flow measurement	240
9.2.1. Volumetric feeders	240
9.2.2. Gravimetric feeders	241
9.2.3. Special methods	244
