

## CONTENTS

	Page
<b>Preface</b>	<b>xi</b>
<b>1. FRICTION AND LUBRICATION</b>	
A. Friction	1
B. Mechanisms of Friction	2
C. Lubrication	12
References	13
<b>2. LOW-FRICTION INORGANIC SOLIDS</b>	
A. Advantages and Disadvantages	15
B. Useful Forms	18
C. Crystal Structure	18
D. Effects of Temperature and Atmosphere	23
E. Bonded Films	24
F. Testing	30
References	41
<b>3. GRAPHITE</b>	
A. Occurrence and Production	42
B. Crystal Structure	43
C. Lubricity and Lubrication Mechanism	45
D. Graphite Dispersions	50
E. Bonded Films	54
F. Carbon-Graphite Bodies	56
G. Impregnated Carbon-Graphite	64
H. Metal-Graphite Composites	65
I. Carbon Brushes for Electrical Applications	67
References	73
<b>4. MOLYBDENUM DISULFIDE</b>	
A. Occurrence and Properties	75
B. Crystal Structure	75
C. Lubrication Properties	80
D. Dry Powders and Dispersions	90
E. Bonded Films	97
F. Films from Chemical Formation in Situ	105
G. Solids Impregnated with MoS <sub>2</sub>	107
H. Oils and Greases with MoS <sub>2</sub> as an Additive	108
References	112
<b>5. MISCELLANEOUS INORGANIC COMPOUNDS</b>	
A. Dichalcogenides	113
B. Lead Compounds	120
C. Fluorides	125
D. Boron Nitride	128
References	129
<b>6. SOFT METALS</b>	
A. General Characteristics	130
B. Thin Films of Soft Metals	131
References	137
<b>7. PLASTIC: GENERAL</b>	

A. Advantages	139
B. Disadvantages	141
C. General Comparison	142
D. Bearing Design	146
<b>8. NYLON</b>	
A. Unmodified Nylon	164
B. Filled Molded Nylon	179
C. Sintered Nylon	189
References	194
<b>9. FLUOROCARBONS</b>	
A. Properties and Characteristics of Fluorocarbons	195
B. Filled or Reinforced Fluorocarbons	206
C. Sheet, Tape, and Laminates	213
D. Fluorocarbon Coatings	214
E. Woven Products	222
F. Powders	224
G. Porous Compacts Impregnated with Fluorocarbons	227
H. Greases	229
I. Applications	229
References	237
<b>10. MISCELLANEOUS THERMOPLASTICS</b>	
A. Polyimides	239
B. Acetals	244
C. Polycarbonates	245
D. Ultrahigh Molecular Weight Polyethylene	245
<b>11. PHENOLICS</b>	<b>246</b>
References	251
<b>INDEX</b>	<b>253</b>
