

CONTENTS

	Page
Preface	iii
1. Introduction to Lubrication Characteristics	1
Classification	4
1-1 Types of Lubrication	4
1-2 Types of Film-Lubricated Bearings	5
Properties of Film-Lubricated Bearings	20
1-3 Gas films	20
1-4 Similarity Conditions Between Lubricating Films	23
1-5 Dynamic Conditions	25
2. Lubricating Film Equations	29
Fundamental Fluid Mechanics	30
2-1 Equations of Fluid Motion	31
2-2 Thermodynamic Effects	35
2-3 Fluid Properties	38
Applications	45
2-4 Boundary Layer	45
2-5 Lubricating Film	49
2-6 The Reynolds Equation	57
2-7 Boundary Conditions	65
2-8 Bearing Design Considerations	67
3. Infinitely Long, Steady, Self-Acting Films	74
Bearing Characteristics	74
3-1 Introduction	76
Sliding Bearings	80
3-2 Plane-Wedge Slider Bearing	80
3-3 Parallel-Surface Slider Bearing	93
3-4 Step Slider Bearing	97
3-5 Taper-Flat Slider Bearing	104
3-6 Gas-Film Shape for Optimum Load Taper-Step Slider Bearing	111
3-7 Parabolic-Film Bearings	115
3-8 Approximate Gas-Film Sliding-Bearing Solutions for Low and High A	128
Journal Bearings	134
3-9 Partial Journal Bearing	134
3-10 Complete Journal Bearing	145
4. Finites, Steady, Self-Acting Films	157
Design Considerations, General	157
Bearing Performance Prediction	159
4-1 Analytical Methods of Solution	159
Slider Bearings	164
4-2 Plane-Wedge Slider Bearings	164
4-3 Curved Slider Bearings	188
4-4 Step Slider Bearings	209
4-5 Taper-Flat Slider Bearings	222

4-6	Pocket Bearings	225
	Thrust Bearings	234
4-7	Annular Thrust Bearing, Sinusoidal Film Thickness (Gas Films)	242
4-8	Wedge-Film Sector Thrust Bearings	244
4-9	Crowned Sector Thrust Bearings	260
4-10	Step Sector Thrust Bearings	269
4-11	Pumping Thrust Bearings	288
	Spherical Bearings	298
4-12	Incompressible and Compressible Films	298
	Journal Bearings	305
4-13	Complete Journal Bearings	310
4-14	Misaligned Journal Bearings	331
4-15	Multiple-Section Journal Bearings, Design Performance Characteristics	338
4-16	Spiral-Groove Journal Bearings	375
	5. Steady, Externally Pressurized Bearings	396
	Types of Flow	397
5-1	Longitudinal Flow	398
5-2	Radial Flow	407
	Types of Bearings	427
5-3	Thrust Bearings	427
5-4	Journal Bearings	461
	6. Compliant Bearings	482
	Introduction	482
6-1	Types of Compliant Surface Bearings	483
	Foil Bearings	484
6-2	Basic Equations	484
6-3	The Perfectly Flexible Foil with Incompressible Lubricants	488
6-4	Self-Acting Foil Bearings	491
6-5	Externally Pressurized Foil Bearings	501
6-6	Dynamic Effects in Foil Bearings	520
6-7	Rotor Support	539
	7. Numerical Analysis Methods for Steady and Unsteady Lubricating Films	550
	Introduction	550
7-1	Equations	551
	Steady (Equilibrium) Bearing Films	552
7-2	Nonlinearized Analytical-Numerical Methods	552
7-3	Linearized Analytical – Numerical Methods	557
7-4	Direct Numerical Methods	559
	Unsteady (Time-Transient) Films and Bearing Systems	586
7-5	Nonlinearized Approaches	586
7-6	Linearized Methods	593
	Appendix : Solution Techniques for Linear Systems	615
A-1	Iteration Methods	615
A-2	Column Method	621
A-3	Bickley-McNamee Method	623
A-4	Booy's Method with Coleman's Improvement	624
A-5	Direct Inversion	627

8. Unsteady Films and Bearing Systems	629
Self-Acting Gas Squeeze Films	630
8-1 Infinitely Long Squeeze Films	630
8-2 Finite Squeeze Films	642
Self-Acting Films with Accelerating Surfaces	652
8-3 Tangential Acceleration	652
Self-Acting Slider Bearings	655
8-4 Normal Oscillations of Slider Bearings	655
Self-Acting Journal Bearings	660
8-5 Unsteady Journal Bearing Film Forces	660
8-6 Journal – Bearing Systems	677
Externally Pressurized Bearings	693
8-7 Thrust Bearings	694
8-7 Journal Bearings	707
9. Special Lubricating Film Conditions	715
9-1 Boundary Lubrication, Materials and Lubricants	716
9-2 Thermal Effects and Deformations	721
9-3 Turbulence	723
9-4 Ultrathin Films and Slip Flow	730
Index	769
