Preface	xxiii
List of Symbols	xxvii
1. Introduction	1
1.1 Conformal and Nonconformal Surfaces	1
1.2 Lubrication Regimes	2
1.3 Closure	10
1.4 Problems	11
1.5 References	11
2. Bearing Classification and Selection	12
2.1 Bearing Classification	13
2.2 Bearing Selection	16
2.3 Closure	24
2.4 Problems	25
2.5 References	25
3. Surface Topography	26
3.1 Geometric Characteristics of Surfaces	26
3.2 Stylus Measurements	27
3.3 Some Noncontacting Measurement Devices	29
3.4 References Lines	31
3.5 Computation of Surface	32
3.6 Autocorrelation Parameter	39
3.7 Distribution of Slope and Curvature	40
3.8 Film Parameters for Different Lubrication Regimes	41
3.9 Transition between Lubrication Regimes	42
3.10 Closure	43
3.11 Problems	44
3.12 References	44
4. Lubricant Properties	45
4.1 Basic Chemistry	46
4.2 Newtonian Fluids	52
4.3 Newton's Postulate	52
4.4 Units of Absolute Viscosity	53
4.5 Kinematic Viscosity	54
4.6 Viscosity Grade System	55
4.7 Viscosity – Pressure Effects	57
4.8 Viscosity – Temperature Effects	63
4.9 Viscosity – Pressure – Temperature Effects	66
4.10 Viscosity – Shear Rate Effects	67
4.11 Viscosity – Shear Rate Effects	68
4.12 Viscosity Index	70
4.13 Oxidation Stability	71
4.14 Pour Point	71
4.15 Density	76
4.16 Limiting Shear Stress	78
4.17 Petroleum or Mineral Oil Base Stocks	78
4.18 Synthetic Oil Base Stocks	83
4.19 Grease Base Stocks	87
4.20 Gases	89

4.21 Closure	90
4.22 Problems	90
5. Bearing Materials	92
5.1 Material Characteristics	92
5.2 Metallics	94
5.3 Nonmetallics	97
5.4 Form of Bearing Surfaces	100
5.5 Materials and Manufacturing Processes Used for Rolling-Element Bearings	101
5.6 Properties of Common Bearing Materials	104
5.7 Closure	115
5.8 Problems	116
5.9 References	116
6. Viscous Flow	117
6.1 Petrow's Equation	117
6.2 Navire-Stokes Equations	119
6.3 Continuity Equation	127
6.4 Flow between Parallel Flat Plates	128
6.5 Flow in a Circular Pipe	131
6.6 Flow Down a Vertical Plane	132
6.7 Viscometers	134
6.8 Closure	138
6.9 Problems	139
6.10References	140
7. Reynolds Equation	141
7.1 Dimensionless Numbers	141
7.2 Reynolds Equation Derived	147
7.3 Physical Significance of Terms in Reynolds Equation	152
7.4 Standard Reduced Forms of Reynolds Equation	156
7.5 Different Normal Squeeze and Sliding Motions	160
7.6 Closure	162
7.7 Problems	163
7.8 References	165
8. Hydrodynamic Thrust Bearings – Analytical Solutions	166
8.1 Mechanism of Pressure Development	166
8.2 General Thrust Bearing Theory	169
8.3 Parallel-Surface Slider Bearing	172
8.4 Fixed-Incline Slider Bearing	173
8.5 Parallel-Step Slider Bearing	186
8.6 Closure	191
8.7 Problems	192
8.8 Reference	195
9. Hydrodynamic Thrust Bearings – Numerical Solutions	196
9.1 Finite-Width, Parallel-Step-Pad Slider Bearing	197
9.2 Fixed-Incline-Pad Slider Bearing	204
9.3 Pivoted-Pad Slider Bearing	209
9.4 Thrust Bearing Geometry	215
9.5 Closure	216
9.6 Problems	216
9.7 References	217
10. Hydrodynamic Journal Bearings – Analytical Solutions	218
10.1 Infinitely Wide-Journal-Bearing Solution	219
10.2 Short-Width-Journal-Bearing Theory	230
10.3 Closure	234
10.4 Problems	235

10.5 Reference	235
11. Dynamically Loaded Journal Bearings	236
11.1 Relevant Reynolds Equation	237
11.2 Full Sommerfeld Infinitely Wide-Journal-Bearing Solution	242
11.3 Linearization of Bearing Reaction	244
11.4 Journal Bearing Stability	250
11.5 Linearization of Beafing Reaction Applied to Short-Width Journal Bearings	252
11.6 Closure	257
11.7 Problems	257
11.8 References	258
12. Hydrodynamic Journal bearings – Numerical Solutions	259
12.1 Operation and Performance Parameters	259
12.2 Performance Parameter Results	262
12.3 Optimization Techniques	268
12.4 Nonplain Configurations	269
12.5 Closure	276
12.6 Problems	276
12.7 References	277
13. Hydrodynamic Squeeze Film Bearings	278
13.1 Parallel-Surface Bearing of Infinite Width	279
13.2 Journal Bearing	283
13.3 Parallel Circular Plate	286
13.4 Infinitely Long Cylinder near a Plane	287
13.5 Closure	290
13.6 Problems	290
14. Hydrostatic Lubrication	293
14.1 Formation of Fluid Film	294
14.2 Pressure Distribution and Flow	294
14.3 Normal Load Component	297
14.4 Frictional Torque and Power Loss	298
14.5 Pad Coefficients	300
14.6 Compensating Elements	306
14.7 Closure	309
14.8 Problems	310
14.9 Reference	312
15. Hydrodynamic Bearings – Considering Higher – Order Effects	313
15.1 Order 1 Solutions (P_{00} and Φ_{00})	317
15.2 Order $(ho/e)^2$ Solutions (P_{01} and Φ_{01})	319
15.3 Inertia Correction (P_{10} and Φ_{01})	321
15.4 Force Components	323
15.5 Fixed-Incline Slider Bearing	327
15.6 Closure	328
15.7 Problem	328
15.8 Reference	328
16. Gas – Lubricated Thrust Bearings	329
16.1 Reynolds Equation	330
16.2 Parallel-Surface Bearing	335
16.3 Parallel-Step Bearing	337
16.4 Spiral-Groove Bearing	346
16.5 Closure	349
16.6 Problems	350
16.7 References	350

17. Gas – Lubricate Journal Bearings	351
17.1 Reynolds Equation	351
17.2 Limiting Solutions	352
17.3 Pressure Perturbation Solution	354
17.4 Linearized ph Solution	356
17.5 Nonplain Journal Bearings	359
17.6 Closure	365
17.7 Problems	367
17.8 References	367
18. Hydrodynamic Lubrication of Nonconformal Surfaces	368
18.1 Infinitely Wide-Rigid-Cylinder Solution	368
18.2 Short-Width-Rigid-Cylinder Solution	373
18.3 Exact Rigid-Cylinder Solution	374
18.4 General Rigid-Body Solution	378
18.5 Starvation Effects	388
18.6 Combined Squeeze and Entraining Motion	392
18.7 Closure	397
18.8 Problems	399
18.9 References	401
19. Simplified Solutions for Stresses and Deformations	402
19.1 Curvature Sum and Difference	403
19.2 Surface Stresses and Deformations	405
19.3 Subsurface Stresses	408
19.4 Simplified Solutions	410
19.5 Rectangular Conjunctions	414
19.6 Closure	415
19.7 Problems	416
19.8 References	416
20. General Solution for Stresses and Deformations in Dry Contacts	417
20.1 General Elasticity Theorems	418
20.2 Line Load Solution	419
20.3 Elastic Deformations in Rectangular Conjunctions	423
20.4 Point Load Solution	426
20.5 Loading on a Semi-Infinite Body	427
20.6 Elastic Deformations in Elliptical Conjunctions	430
20.7 Closure	432
20.8 Problems	434
20.9 References	434
21. Elastohydrodynamic Lubrication of Rectangular Conjunctions	435
21.1 Incompressible Solution	436
21.2 Compressible Solution	439
21.3 Flow, Loads, and Center of Pressure	442
21.4 Pressure Spike Results	445
21.5 Useful Formulas	451
21.6 Closure	461
21.7 Problems	463
21.8 References	463
22. Elastohydrodynamic Lubrication of Elliptical Conjunctions	465
22.1 Relevant Equations	466
22.2 Dimensionless Groupings	470
22.3 Hare-EHL Results	472
22.4 Comparison between Theoretical and Experimental	476
22.5 Soft-EHL Results	482
22.6 Starvation Results	484
22.7 Closure	496

22.8	Problems	497
22.9	References	497
23.	Film Thicknesses for Different Regimes of Fluid Lubrication	499
23.1	Dimensionless Grouping	500
23.2	Isoviscous - Rigid Regime	501
23.3	Viscous – Rigid Regime	502
23.4	Sioviscuos – Elastic Regime	503
23.5	Viscous – Elastic Regime	504
23.6	Procedure for Mapping the Different Lubrication Regimes	505
23.7	Thermal Correction Factor	509
23.8	Surface Roughness Correction Factor	511
23.9	Closure	514
23.10	Problems	515
23.11	References	515
24.	Rolling – Element Bearings	518
24.1	Historical Overview	518
24.2	Bearing Types	520
24.3	Geometry	529
24.4	Kinematics	539
24.5	Separators	543
24.6	Static Load Distribution	544
24.7	Rolling Friction and Friction Losses	553
24.8	Lubrication Systems	558
24.9	Fatigue Life	561
24.10	Dynamic Analyses and Computer Codes	573
24.11	Ioannides-Harris Theory	574
24.12	Applications	575
24.13	Closure	585
24.14	Problem	586
24.15	References	586
25.	Additional Elastohydrodynamic Lubrication Applications	589
25.1	Involute Gears	589
25.2	Continuously Variable-Speed Drives	592
25.3	Railway Wheels Rolling on Wet or Oily Rails	598
25.4	Synovial Joints	604
25.5	Closure	606
25.6	Problems	607
25.7	References	608
26.	Non-Newtonian Fluid Effects in Elastohydrodynamic Lubrication	610
26.1	Fluid Rheology Models	610
26.2	Formulation of Fluid Rheology Models	612
26.3	Modified Reynolds Equation	616
26.4	Steady-State Results	620
26.5	Stationary Asperity Consideration	629
26.6	Modified Transient Reynolds Equation	632
26.7	Closure	634
26.8	Problem	635
26.9	References	635
27.	Thermal Elastohydrodynamic Lubrication	637
27.1	Historical Background	637
27.2	Theoretical and Numerical Schemes	639
27.3	Numerical Solutions of Thermal Equations	648
27.4	Energy Equation	652
27.5	Results and Discussion	658

27.6	Closure	670
27.7	Problems	672
27.8	References	672
