

CONTENTS

Preface	vii
Contents	xi
List of figures	xv
List of tables	xxi
Chapter 1 History	1
1.1 Early beginnings	1
1.2 Recorded history	3
1.3 Range of applications	7
Chapter 2 Occurrence and extraction	11
2.1 Occurrence	11
2.2 Extraction of molybdenum disulphide	13
2.3 Extraction of molybdenum	17
2.4 Synthesis of molybdenum disulphide	19
Chapter 3 Molybdenum and its compounds	21
3.1 molybdenum	21
3.2 Oxides of molybdenum	24
3.3 Sulphides of molybdenum	26
3.4 Other compounds of molybdenum	27
3.5 Molybdenum compounds in lubrication	28
3.6 Chemical uses of molybdenum	29
Chapter 4 Properties of molybdenum disulphide	31
4.1 Physical properties	31
4.2 Intercalation compounds	34
4.3 Electrical properties	35
4.4 Chemical properties	38
4.5 Effects of temperature	39
4.6 Oxidation	40
4.7 Effect of moisture	43
Chapter 5 Mechanism of lubrication	47
5.1 Fundamentals of friction	47
5.2 Friction of molybdenum disulphide	50

5.3	Effect of contact load on friction	51
5.4	Effects of vapours and other contaminants	56
5.5	Load-carrying capacity	58
5.6	Summary	58
Chapter 6	Formation of molybdenum disulphide films	61
6.1	Film formation	61
6.2	Burnished films from powder	62
6.3	Burnishing or soft films	66
6.4	Film formation by transfer	69
6.5	Structure of burnished or run-in films	69
6.6	Effects of the substrate on film formation	72
6.7	Effects of moisture and other vapours on film formation	77
Chapter 7	Properties of molybdenum disulphide films	79
7.1	Friction	79
7.2	Effects of moisture and other vapours	81
7.3	Effects of temperature	85
7.4	Effects of radiation	88
7.5	Effects of vacuum	89
7.6	Effects of particle size and shape	90
7.7	Effect of film thickness	92
7.8	Effects of sliding speed	97
7.9	Film life and mechanism of failure	99
7.10	Effects of additives	104
Chapter 8	Transfer in lubrication	107
8.1	General phenomenon of transfer	107
8.2	Transfer of molybdenum disulphide	108
8.3	Applications of transfer	115
8.4	Composition of the transfer source	117
8.5	Nature and location of the transfer source	120
Chapter 9	Lubrication by molybdenum disulphide alone	129
9.1	Different techniques of use	129
9.2	Use in free powder form	131
9.3	Dispersions	134
9.4	Compacts	136
9.5	In-situ formation	138
9.6	Burnished films	148

Chapter 10	Sputtering and other physical deposition processes	153
	10.1 The sputtering process	153
	10.2 Effects of sputtering variables on film structure	156
	10.3 Effect of substrate	161
	10.4 Structure of the sputtered coating	163
	10.5 Performance of sputtered coatings	168
	10.6 Effects on co-sputtering	171
	10.7 Effects of ion bombardment	174
	10.8 Pulsed laser deposition	176
Chapter 11	Bonded films	179
	11.1 Types of bonded film	179
	11.2 Other components of bonded films	186
	11.3 Substrate preparation and pre-treatment	187
	11.4 Application of the bonded film	192
	11.5 Curing the film	195
	11.6 Plasma spraying	195
	11.7 Friction and wear properties of bonded films	196
	11.8 Repair and renewal of films	204
Chapter 12	Composites	207
	12.1 Lubricating composites	207
	12.2 Polymer composites	208
	12.3 Metallic composites	226
	12.4 Ceramic and inorganic composites	233
	12.5 Transfer lubrication of rolling bearings	235
	12.6 Electrical brushes and sliprings	239
Chapter 13	Use in oils and greases	245
	13.1 Interaction between molybdenum disulphide and liquids	245
	13.2 Use in lubricating oils	255
	13.3 Molybdenum disulphide in greases	265
	13.4 Pastes and dispersions	275
Chapter 14	Other lamellar solid lubricants	283
	14.1 Occurrence and properties	283
	14.2 Intercalation	284
	14.3 Graphite	287
	14.4 Graphite fluoride	291
	14.5 Transition metal dichalcogenides	294

Chapter 15	Corrosion and fretting	305
	15.1 Background	305
	15.2 The chemical environment	307
	15.3 Corrosion protection	308
	15.4 Fretting	310
Chapter 16	Selection and use	313
	16.1 Selecting the class of lubricant	313
	16.2 Selecting the type of solid lubricant	319
	16.3 Use of molybdenum disulphide	321
	References	329
	Subject index	365
