PREFACE	xv
1. INTRODUCTION	1
1.1 Adhesion	1
1.2 Contaminants	2
1.3 Types of Wear	2
1.4 Friction and wear experiments	2
1.5 Metallurgical examination	6
1.6 Application of wear results	6
2. SURFACE TOPOGRAPHY	8
2.1 Asperities	8
2.2 Measurement of waviness	9
2.3 Asperity angle	10
2.4 Measure of roughness	11
2.5 Fullness or emptiness	11
2.6 Abbot's bearing curve	12
3. CONTACT OF SOLIDS	14
3.1 Single contact	14
3.2 Multiple contact	16
3.3 An idealised rough surface	16
3.4 A realistic rough surface	18
3.5 Plastic contact	20
3.6 Effect of work hardening	21
4. FRICTION	24
4.1 Area of contact	24
4.2 Adhesion of junctions	25
4.3 Mechanism of friction	28
4.4 Amontons' laws	30
5. EFFECT OF SLIDING	32
5.1 Junction growth	32
5.2 Work of adhesion	33
5.3 Kinetic friction	35
5.4 Stick-slip	36
5.5 Thermal effect	37
5.6 Oxide film	39
5.7 Sliding between brittle surfaces	39
5.8 Effect of contaminants on friction	40
6. MOLECULAR THEORY OF FRICTION AND WEAR	42
6.1 Dry friction	42
6.2 Wear	44
7. RUNNING-IN WEAR	46
7.1 Wear curve	46
7.2 Mechanism	46
7.3 Law of running-in wear	47
8. ADHESIVE WEAR	49
8.1 Rate of wear	49

8.2	Junction interaction	50
8.3	Law of adhesive wear	50
8.4	Asperity angle	52
8.5	Fatigue mechanism	55
9.	OXIDATIONAL HYPOTHESIS OF WERA	59
9.1	Oxidational Hypothesis	59
9.2	Comment on equation	60
10.	SURFACE CONTAMINANTS	62
10.1	Fractional film defect	62
10.2	Heat of adsorption theory	63
10.3	Importance of E	67
10.4	A simplified law	67
11.	ABRASIVE WEAR	69
11.1	Abrasive wear coefficient	69
11.2	Abrasive wear resistance	70
11.3	Abrasive at the interface	71
11.4	Stored energy	73
12.	WEAR DEBRIS	74
12.1	Energy consideration	74
12.2	Debris size	75
12.3	Effect of load	76
13.	METAL TRANSFER	78
13.1	Steel on brass	78
13.2	Steel on steel	79
13.3	Amount of transfer	80
14.	SURFACE AND SUBSURFACE	82
14.1	Surface layers and sublayers	82
14.2	Friction	82
14.3	Surface fatigue	82
14.4	Plasticity index	83
15.	TEMPERATURE AND SPEED	85
15.1	Temperature	85
15.2	Speed	86
16.	SOLUBILITY	90
16.1	Solubility	90
17.	CRYSTAL STRUCTURE	93
17.1	Adhesion coefficient	93
17.2	Experiment with cobalt	93
17.3	Rare earth materials	94
17.4	Chang of texture	95
18.	ROLLING RESISTANCE	96
18.1	Principles of rolling motion	96
18.2	Slip	96
18.3	Rolling in the plastic range	98
18.4	Rolling in the elastic state	101
18.5	Shake-down-limit	102
19.	WEAR UNDER ROLLING CONTACT	105
19.1	Slip area	105
19.2	Wear	105

19.3A	low of rolling wear	106
20.	POLYMERS	110
20.1	Friction and wear	110
20.2A	general law of friction	111
20.3	Rubber	113
21.	FRETTING	116
21.1	Four stages of fretting	116
21.2	Measurement of pit depth	118
21.3	Load and temperature	119
21.4	Humidity	120
22.	EXAMPLES OF TRIBOLOGICAL COMPONENTS	123
22.1	Gears	123
22.2	Bearings	127
22.3	Piston rings	129
22.4	Wear under impact condition	129
23.	WEAR OF BRASS	131
23.1	Weight loss with sliding distance	131
23.2	Wear rate	132
23.3	Transition load	134
24.	FRICITION AND WEAR OF GRAPHITE AND CARBIDE	137
24.1	Graphite	137
24.2	Carbides	138
25.	WEAR OF CAST IRON	140
25.1	The role of graphite	140
25.2	Hardness	141
25.3	Lubricated sliding wear	142
25.4	Non-lubricated sliding wear	144
25.5	Concluding remarks	146
26.	WEAR OF ALUMINIUM-SILICON ALLOYS	148
26.1	Effect of silicon on wear	148
26.2	Deformation of a bush	149
26.3A	a physical model	150
26.4	Wear rate	151
27.	DESIGN FOR WEAR RESISTANCE	154
27.1	Fatigue wear	154
27.2	Erosive wear	154
27.3	Cavitation erosion	154
27.4	Design for adhesive and abrasive wear resistance	156
27.5	Importance of wear	157
INDEX		161
