

CONTENTS

	Page
Section I : An Introduction to Wear	
Wear Characteristics of Metals	1
Fight Against Wear Starts With Material Selection	11
Hardness of Tempered Martensite in Carbon and Low-Alloy Steels	18
Section II : Wear Testing	
A Systems Analysis Data Sheet for Friction and Wear Tests and an Outline for Simulative Testing	29
Wear Testing Objectives and Approaches	40
Wear Debris as an Indicator of Valid Simulation in Wear Tests	49
Classification and Precision of Abrasion Tests	57
Predictive Maintenance by Ferrography	67
Section III : Abrasion	
A Review of Two-Body Abrasive Wear	77
Optimizing Abrasion Resistance and Toughness in Steels and Irons for the Mining Industry	94
The Abrasion Resistance of Some Hardened and Tempered Carbon Steels	120
Influence of Abrasive Hardness on Wear Resistance of High-Chromium Irons	126
Section IV : Lubricated Wear	
Wear in Lubricated Journal Bearings	132
Guide to Selection of Materials for Bushings and Thrust Bearings	140
Section V : Sliding (Dry) Wear	
The Formation of White Layers at Rubbing Surfaces	142
Mechanisms of Dry Wear of Materials Steels	147
Wear Compatibility of Unlubricated Stainless Steel and Other Metal Couples	170
Effect of Load on the Adhesive Wear of Steels	176
Wear of Aluminum-Silicon Alloys	186
Section VI : Rolling Contact	
Valuable Results From Bearing Damage Analysis	193
Severe Wear of Rolling/Sliding Contacts	201
Section VIII : Erosion	
Erosion of Surfaces by Solid Particles	220
Section VIII : Fretting	
The Fretting Wear of Mild Steel from 200 to 500 C	237
Fretting in Hostile Environments	261
Section IX : Rock Drilling	
Abrasive Wear of Tungsten Carbide – Cobalt Composites	270
A Study of Bit-Wear in Rotary Drag Drilling	279
Section X : Wear of Cutting Tools	
Selection the Optimum Cutting Tool Material	283
Effect of Different Heat Treatments on the Wear of High Speed Steel Cutting Tools	291
Stoichiometry of TiC and its Significance to the Performance of Hard Metal Compacts	298

Section XI : Coatings and Case-Hardening Processes	
Factors Affecting Selection and Performance of Hard-Facing Alloys	305
The Formation, Structure, and Wear Properties of Certain Non-metallic Coatings on Metals	312
Friction and Wear of Some Engineering Materials Against Hard Chromium Plating	339
Microstructural and Wear Properties of Sputtered Carbides and Silicides	348
Plasma-Arc Hardfacing Exhaust Valves With an Iron-Base Alloy	354
Composite Carbide Surfaces Make Castings Wear Better	360
Gas Carbonitriding Adds Reliability to Business Machine Parts	362
Boriding Steels for Wear Resistance	364
Titanium Carbide Coating Raises Wear Resistance of Inserts	367
Coatings Lengthen Jet Life	368
Section XII : Special Materials	
Friction and Wear of Plastics	371
Dry Bearings : A Survey of Materials and Factors Affecting Their Performance	384
High-Temperature Bearing Materials	417
Wear Resistant Steel Bonded Carbides	423
Tribological Properties of Gold for Electric Contacts	431
Tribaloy Intermetallic Materials : New Wear- and Corrosion – Resistant Alloys	442
New Automotive Poppet Valve Materials	447
Index	451
