Introduction 1

D. A. Rigney

Sliding Wear Mechanisms 13

L. E. Samuels, E. D. Doyle and D. M. Turley

Introduction	13
Types of Particles Present in Wear Debris	15
Sampling of the Wear Particles	15
Plate-Shaped Particles	16
Laminar Particles	16
Wedge-Shaped Particles	20
Spherical Particles	22
Ribbon-Shaped Particles	24
Short Splintery Particles	24
Long Irregular Particles	25
Particles of Irregular Morphology	29
Adhesion	29
Fracture of Interacting Asperities	32
Fracture in a Work-Hardened Surface Layer	33
Oxide Particles	34
The Structure of Worn Surfaces	35
Remarks	38

Update on the Delamination Theory of Wear 43

Nam P. Suh

Introduction	43
Review of the Delamination Theory of Wear	45
Flow Stress of the Surface Layer	46
The Genesis of Friction and Its Effect on Delamination Wear	48
Implications of the Genesis of Friction on Delamination Wear	58
Delamination Wear Mechanisms	60
Asperity Deformation and Fracture	60

Crack Nucleation	61
Crack Propagation	63
Wear Sheet Formation	67
Extension of the Delamination Theory of Wear to Polymers	67
Conclusions	68

Abrasive Wear 73

Martin A. Moore

Introduction	73
Mechanisms of Material Removal	75
Plastic Deformation	76
Fracture	85
Material Removal in Practice	87
Corrosion and Environmental Effects	93
Effects of Properties of the Abrasive	93
Abrasive Particle Shape, Orientation and Size	93
Mechanical Properties	97
Effects of Properties of the Worn Material	100
Mechanical Properties	100
Microstructural Features	105
Selection of Materials for Abrasive Wear Resistance	111

Dislocation Concepts in Friction and Wear 119

D. Kuhlmann-Wilsdorf

Introduction	120
What Makes a Contact Spot Strong and How Are Asperities Maintained?	120
Micro-Roughness and Persistent Asperities of Contact Spots	132
Adhesion and Surface Roughness	137
The Number of Slip Systems and the Coefficient of Friction	140
Effects of Sliding Distance, Sliding Direction, and Bulk Texture on the Coefficient of Friction	150
The Role of Surface Films	151
Some Thoughts on Geometrical Effects, Surface Stress/Strain Distribution, Wear, and Delamination	155
The Effect of Changes in Surface Hardness on the Coefficient of Friction	157
Wear Rate and "Wearing-In"	161

The Near-Surface Shear Strain Distribution As Determined From Work Hardening	170
Dislocation Behavior and Microstructures	176
Summary and Outlook	182

The Role of Fatigue in Sliding Wear 187

Yoshitsugu Kimura

Introduction	187
Fatigue Theories of Wear	189
Substrate Fatigue Theory	193
Changes in Subsurface	199
Formation of Wear Particles	206
Quantitative Correlations	210
Conclusions	217

Wear and Fracture Mechanics 221

Alan R. Rosenfield

Introduction	221
Abrasive Wear	222
Sliding Wear	226
Discussion	232

Characterization of Wear Surfaces and Wear Debris 235

A. W. Ruff, L. K. Ives and W. A. Glaeser

Introduction	235
In-SEM Wear Experiments	238
Conclusions	245
Dry Sliding Wear Studies of Steels	248
Experimental Methods	249
Materials Studied	250
Results and Discussion	252
Conclusions	265
Application of Transmission Electron Microscopy to the Study of Friction and Wear	269
Replica Studies	269
Examination of Wear Debris	271
Thin Foil TEM	273
Conclusions	284

Environmental Considerations in Wear Processes 291

R. M. Bentley and D. J. Duquette

Introduction	292
Oxidizing Atmospheres	292
Inert and Nonoxidizing Environments	297
Effects of Humidity on Wear	301
Effect of Temperature on Wear	310
Aqueous Environments	315
Special Applications for Wear-Resistant Alloys	319
Tribaloy 700 in Sodium	320
Wear of a Co-Cr-Mo Shoulder Prosthesis	321
Discussion	322

Coatings for Tribological Applications 331

M. B. Peterson and S. Ramalingam

Introduction	331
Classification	332
Low Shear Strength Films	335
Types	335
Frictional Behavior of Soft Films	336
Effect of Time	340
Effect of Temperature	341
Effect of Load	343
Effect of Velocity	343
Effect of Contact Area	344
Effect of Film Thickness	345
Substrate Effects	346
Atmosphere	348
Low Shear Strength Film Effects in Friction and Wear	350
Coatings for Wear Resistance — Hard Coats	351
Wear-Resistant Coating Material Selection	352
Coating Thickness	355
Coating Bond Strength Requirements	356
Summary of Requirements for Wear-Resistant Coatings	357
Selection of Hard Coating Processes	358
Coating Processes	358
Pyrolytic Decomposition	359
Chemical Vapor Deposition	359
Vacuum Coating Processes	362
Sputtering	363

Summary	365
Tribological Applications of Soft and Hard Coats	366
Closing Remarks	368

Wear of Steels 373

Olof Vingsbo and Sture Hogmark

Introduction	373
Background Fundamentals	374
Tribo-Systems and the Definition of Wear	374
Wear Mechanisms	374
Wear — a Surface Phenomenon	375
Wear Resistance and Mechanical Properties	378
General	378
Application to Steels	379
Wear Mechanisms in Steels	380
Abrasive Wear	381
Adhesive Wear	384
Combined Effects of Abrasion and Adhesion	389
Contact Fatigue	390
Friction Layers of Worn Steel Surfaces	393
Hardness Profiles	393
The Internal Structure of Friction Layers	398
Selected Examples of Friction Layers	399
Wear Properties of Friction Layers	405
Conclusions	407

Friction and Wear of Thermoplastic Polymers 409

E. Hornbogen and K. Schäfer

Introduction	409
Structure and Properties of Polymeric Materials	412
Molecules	412
Morphology	414
Bulk Physical Properties	416
Adhesion	416
Friction	419
Wear	426
Combination of Friction and Wear	430
Summary	433
Appendix: List of Symbols and Abbreviations	437

Wear Mechanisms in Ceramics 439

A. G. Evans and D. B. Marshall

Introduction 439

The Lateral Fracture Model 441

The Threshold 441

The Lateral Crack Extension 441

The Material Removal Rate 443

Correlations With Experiment 444

Thermal Effects 448

Sub-Threshold Wear Rates 449

Implications and Conclusions 449

Appendix: Lateral Crack Extension 450

INDEX 453
