
Contents

Preface to Third Edition	xiii
Chapter 1 Basic Principles of Lubrication	1
1.1 Meaning of lubrication	1
1.2 Friction	2
1.3 Liquid lubrication	4
1.4 Hydrodynamic lubrication	6
1.5 Boundary lubrication	9
1.6 Externally pressurised lubrication	12
1.7 Dry or solid lubrication	13
1.8 Wear	13
1.9 Cooling	14
1.10 Corrosion prevention	14
1.11 Summary	15
Chapter 2 Choice of Lubricant Type	17
2.1 Whether to lubricate or not	17
2.2 The problem of lubricant selection	18
2.3 Basic classes of lubricant	20
2.4 Choosing the lubricant class	22
2.5 Lubricant choice for particular types of component	25
2.6 Lubrication of complex machines	28
Chapter 3 Lubricating Oils	31
3.1 The important properties of oils	31
3.2 Mineral oils	32
3.3 Viscosity	35
3.4 Boundary lubrication	39
3.5 Oil deterioration	41
3.6 Contamination	43
3.7 Compatibility	46
3.8 Corrosion	46
3.9 Synthetic and natural oils and emulsions	47
Appendix – Viscosity Units	55
Chapter 4 Selection of Lubricating Oil	59
4.1 The selection process	59
4.2 Choosing the correct oil viscosity	59
4.3 Boundary lubrication requirements	62
4.4 Other additives	65
4.5 Selection of base oil	66
4.6 Automotive engine oils	70

4.7	Vehicle transmission lubricants	76
4.8	Metalworking lubricants	77
4.9	Process fluids as lubricants	79
4.10	Rationalization of lubricating oils	80
4.11	Summary	82
Chapter 5 Oil Supply Systems		83
5.1	Advantages of oil supply systems	83
5.2	Total loss systems	84
5.3	Ring, disc and splash lubrication	89
5.4	Oil mist or fog systems	91
5.5	Oil circulation systems	93
5.6	Oil changing problems	96
5.7	Selection of the appropriate system	98
Chapter 6 Oil Changing and Oil Conservation		99
6.1	Oil changing	99
6.2	Oil resources and conservation	101
6.3	Oil deterioration in use	103
6.4	Establishing the oil change period	108
6.5	Changing the type of oil	109
6.6	Carrying out the oil change	113
6.7	Handling the old oil	117
6.8	Disposing of emulsions and water-contaminated oils	119
6.9	Laundering	121
6.10	Re-processing for fuel use	123
6.11	Re-refining	125
Chapter 7 Greases and Anti-seizes		127
7.1	The nature of greases	127
7.2	Composition of greases	127
7.3	Grease manufacture	131
7.4	Mechanism of action of greases	132
7.5	Properties of greases	133
7.6	Advantages and disadvantages of grease	141
7.7	Selection and applications of greases	143
7.8	Methods of applying greases	150
7.9	Anti-seize and anti-scuffing compounds	151
Chapter 8 Dry Bearings and Solid Lubrication		153
8.1	Mechanism of solid lubrication	153
8.2	Advantages and disadvantages of solid lubricants	156
8.3	Graphite	157
8.4	Molybdenum disulphide and similar compounds	160
8.5	Other inorganics	164
8.6	PTFE and similar polymers	165

8.7	Nylons	167
8.8	Acetals	169
8.9	Polyetheretherketones (PEEK)	169
8.10	Other polymers	169
8.11	Metals as solid lubricants	170
8.12	Composites	171
8.13	Diamond-Like Carbon (DLC)	173
8.14	Selection of solid lubricants	173
8.15	Designing for solid lubricants	174
8.16	Some applications of solid lubricants	177
	Appendix – Theory of Friction of Solid Lubricants	180
Chapter 9	Gas Bearings	181
9.1	Principles of gas bearings	181
9.2	Properties of the gas	182
9.3	Advantages and disadvantages of gas bearings	185
9.4	Examples of gas bearing use	186
Chapter 10	Sealing of Lubricants	189
10.1	Principle of sealing	189
10.2	Static seals	190
10.3	Semi-static seals	191
10.4	Rotary seals	193
10.5	Sealing reciprocating shafts	199
10.6	Seal materials	200
10.7	Handling and fitting	201
Chapter 11	Lubricant Testing and Specifications	203
11.1	The object of testing	203
11.2	Functional tests	204
11.3	Chemical and physical tests	209
11.4	Standards and specifications	218
11.5	Automotive engine oil specifications	221
11.6	Drawing up a specification	224
11.7	Precision of tests	226
Chapter 12	Lubricant Monitoring	229
12.1	The objects of lubricant monitoring	229
12.2	Monitoring the quality of the lubricant	230
12.3	Wear monitoring	236
12.4	Field tests	246
12.5	Application to grease	249
12.6	Selecting and designing a monitoring programme	249
12.7	Investigating failures	252

Chapter 13 Lubricant Handling and Storage	253
13.1 Care in lubricant handling	253
13.2 Lubricant packaging and delivery	253
13.3 Storage	255
13.4 Dispensing and applying lubricants	258
Chapter 14 Health and Safety	263
14.1 Overall safety of lubricants	263
14.2 Flammability and explosions	264
14.3 Accidents involving lubricants	268
14.4 Health aspects of lubricants	269
14.5 Environmental impact	276
Bibliography	277
Index	279
