

# Contents

USUAL MEANING OF SYMBOLS USED	vii
1 INTRODUCTION	1
2 THE MEASUREMENT OF SIZE REDUCTION	3
Methods of Measuring Particle Size	4
Methods of Measuring Surface Area	5
Comparison of Methods	6
Relationship between Surface Area and Particle Size	
Distribution	6
Representation of Size Distribution	10
Appreciation of Particle Size	10
Reduction Ratio	10
3 THE NATURE OF BREAKING	15
Resistance to Breaking	16
The Transformation of Forces	19
Conditions for Breaking	23
Points of Weakness	23
Behaviour of Single Crystals	25
Behaviour of Granular Forms	29
Propagation of Cracks	30
Crack Healing	31
Mechanism of Compression	32
Temperature Effects	33
Effect of Rate of Application of Force	34
Hardness	35
Abrasion	41
Ductility	44
Stickiness	46
4 THE ENERGY CONSUMED IN THE COMMINUTION PROCESS	49
Energy Consumed by Material	50
Grindability	57
Energy Supply Required by Comminuting Equipment	60

5	THE SIZE AND SHAPE OF COMMINUTED PARTICLES	67
	Size Distribution	67
	Breakage and Selection Functions	75
	Degree of Fineness	79
	Natural Grain Size	79
	Geometry of Broken Particles	81
	Definition of Shape	85
	Effect of Continued Comminution	87
	Kinetics of Grinding	91
	Size Control During Milling	92
	Closed-circuit Milling	93
	Closed-circuit Calculations	94
6	THE BEHAVIOUR OF MIXTURES DURING COMMINATION	101
	Mixtures of Two Solid Components	101
	Wet and Dry Comminution	103
	Additives to Aid Grinding	108
	Concomitant Effects of Comminution	111
7	THE CLASSIFICATION, SELECTION AND LAYOUT OF COMMINATION EQUIPMENT	115
	Earliest Classification	115
	Classification According to Purpose	115
	Classification According to Comminution Process	117
	Mechanics of Comminuting Equipment	117
	Preliminary Considerations for Selection of Equipment	119
	Plant Layout and Design	123
8	NIPPING MACHINES	129
	Nipping	129
	Jaw, Gyratory and Roll Crushers	132
	Jaw Crushers	133
	Gyratory Crushers	146
	Roll Crushers	157
	Comparison of Jaw, Gyratory and Roll Crushers	168
	Disc Crushers	170
	Pan Mills	173
	Ring Roll and Ring Ball Mills	181
	Raymond Mill	183
	Lopulco or Loesche Mill	185
	Babcock and Wilcox Ring Ball Mill	186
	Capacity of Ring Roll and Ring Ball Mills	188
	Power Consumption of Ring Roll and Ring Ball Mills	189
9	IMPACTING MACHINES	191
	Mechanism of Impact	192
	Rotary Hammer Machines	193
	Mechanism in Rotary Impact Mill	196

Rotor Speed	197
Number of Impactors or Hammers and Their Shape	198
Nature and Design of Rotor	199
Impact Plates	200
Size of Product	201
Shape of Product Particle	201
Method of Feeding	202
Air Flow in Machines	203
Maintenance	203
Capacity	204
Power Consumption	204
Additional Processing with Rotary Impactor	204
Pin Mills	205
Power Consumption	208
Capacity	208
Stamp Mills	209
Pestles	210
Drop	210
Water Usage	210
Size of Feed	210
Size of Product	211
Capacity	211
Power	211
Vibration Mills	211
Advantages of Vibration Mill	212
Disadvantages of Vibration Mill	213
Torus Mill	213
Cylindrical Mill	216
10 TUMBLING MACHINES	225
Rod-loaded Mills	226
Ball-loaded Mills	234
Autogenous Mills	249
11 CUTTING MACHINES	255
Mechanism of Cutting	255
Materials of Construction	256
Types of Cutting Tool	257
12 ATTRITING MACHINES	261
Buhrstone	261
Colloid Mill	262
Petit Pulveriser	262
Fluid-energy Mill	263
Sand Grinder	266
Ultra-rotor	267

13 OTHER METHODS OF COMMINUTION	271
Weathering	271
Thermal Size Reduction	271
Pressure Alteration	272
Ultrasonics	272
Electrical	273
Chemical	274
Explosion	275
INDEX	281
