

Contents

<i>Preface</i>		vii
Chapter	1. The design and functioning of gearboxes	1
	2. The design and mounting of gear trains	41
	3. Design of spindles and bearings	71
	4. Machine beds and slideways	87
	5. Automatic lubrication and flotation of slide-ways and bearings	106
	6. Design and operation of friction clutches	122
	7. Machine control. Positioning and feed tripping systems	140
	8. Cam design and operation	165
	9. Reciprocating machines and quick return motions	181
	10. Measurement during machining and automatic sizing	210
	11. Copying devices and bracer control systems	225
	12. Metal removal by electrical techniques	241
	13. Machine tool research and experiment	256
	14. Metrication and the machine tool	269
	15. General design considerations	279
	16. Worked examples in machine design and construction	294
<i>Index</i>		241
