

CONTENTS

	Page
1 INTRODUCTION	1
1-1 The Engineering Systems	2
1-2 The Unified Concepts	3
1-3 Organization of the Text	4
1-4 How Much Should You Know Before You Start?	5
2 REVIEW OF MATHEMATICS	6
2-1 Calculations Using Scientific Notation	7
2-2 The Accuracy of Measurements and Calculations	9
2-3 Converting the Units of a Measurement or Calculation	11
2-4 Calculations Involving Simple Geometric Objects	15
2-5 Vector Addition, Subtraction, and Resolution	18
*Vector Addition Using Trigonometry	20
2-6 Drawing and Interpreting Graphs	20
*The Slope of a Curve	22
3 REVIEW OF PHYSICS	27
3-1 Motion: Distance and Time	28
3-2 Force and Mass	29
Newton's Second Law	29
Acceleration of Gravity	30
Density	31
3-3 Liquids, Gases, and Pressure	32
Boyle's Law	34
Hooke's Law	35
3-4 Work and Energy	35
Power	36
Energy	37
3-5 Heat and Temperature	39
Temperature	40
Equivalence of Mass and Energy	40
Heat Units	42
Specific Heat	42
Phase Changes	43
3-6 Electricity	43
Electrical Energy	44
3-7 Summary	46
4 FORCES	49
4-1 Force in Mechanical Translational Systems	50
Forces with the Same Line of Action	50
*Forces with Different Lines of Action	52
4-2 Torque in Mechanical Rotational Systems	53
Net Torque	55
*More Complicated Torques	56
4-3 Pressure in Fluid Systems	57
Pressure Units	58
Pressure Instruments	59
4-4 Temperature in heat Systems	60
4-5 Electromotive Force in Electrical Systems	62
4-6 Four Different Kinds of force	63
Resistive Force	64

	Capacitive Force	64
	Inertive Force	65
4-7	Summary	66
5	PARAMETERS	71
5-1	Distance in Mechanical Translational Systems	72
5-2	Angle in Mechanical Rotational Systems	73
5-3	Volume in Fluid Systems	76
5-4	Charge in Electrical Systems	79
5-5	Quantity of Heat in Heat Systems	80
5-6	Summary	83
6	PARAMETER RATE	86
6-1	Distance —Time Graphs: Velocity	87
6-2	Velocity —time Graphs: Acceleration	89
6-3	Kinematic Equations	91
6-4	Unified Kinematics	95
6-5	Mechanical Rotational Kinematics	96
6-6	Fluid Kinematics	99
6-7	Thermal Kinematics	102
6-8	Electrical Kinematics	104
6-9	Summary— and a Word of Encouragement	106
6-10	Energy Rate: Power	106
7	RESISTANCE AND ENERGY LOSS	113
7-1	Resistive Force	114
	Mechanical and Fluid Systems	114
	Electrical and Heat Systems	116
7-2	Friction Forces in Mechanical Systems	117
	Dry Friction	117
	Viscous Friction	120
7-3	Resistance	122
7-4	Energy Loss from Resistors	127
7-5	Resistivity and Conductivity	130
	Electrical Systems	130
	Heat System	131
	Fluid System	133
7-6	Resistors in Series and Parallel	136
	Electrical System as a Model	136
	Other Systems	137
	Equivalent Resistance	138
7-7	Summary	142
8	ANOTHER SYSTEM: MAGNETISM	147
8-1	Magnetic Fields and Magnetic Flux	148
8-2	Magnetic Field of a Current	151
	Magnetic Fields in Ferromagnetic Materials	153
8-3	Comparison of Magnetic and Electric circuits	156
8-4	Induced Electromotive Force	159
	Induced Electromotive Force in a Moving Conductor	159
	Induced Electromotive Force from a Changing Magnetic Field	161
8-5	Self-Induction	163
8-6	Summary	166
9	CAPACITANCE AND POTENTIAL ENERGY STORAGE	
9-1	Two Ways to Store Energy	
9-2	Capacitive Force, Capacitors, and Capacitance	
9-3	Mechanical Translational System	
9-4	The Gravitational ‘Spring’—a Special Case	
9-5	Mechanical Rotational System	

- 9-6 Fluid System (Liquid)
- 9-7 Fluid System (Gas)
- 10 INERTANCE AND KINETIC ENERGY STORAGE
- 11 ENERGY TRANSFER AND STORAGE: RC SYSTEMS
- 12 ENERGY TRANSFER AND STORAGE: RM SYSTEMS
- 13 ENERGY TRANSFER AND STORAGE: MC AND RMC SYSTEMS
- 14 FORCED OSCILLATIONS: R, M, AND C SYSTEMS
- 15 FORCED OSCILLATIONS: RC AND RM SYSTEMS
- 16 FORCED OSCILLATIONS AND RESONANCE: RMC SYSTEMS
- 17 WAVES
- 18 RADIATED ENERGY
