Chapter 1 Fluid Mechanics	1
1.1 Continuity for a general compressible fluid	1
1.2 Continuity for an incompressible fluid	2
1.3 Strain rate relationships	2
1.4 Stress-strain rate relationships	5
1.5 Equations of motion in terms of stress	8
1.6 Navier-Stokes equations of motion for a compressible fluid (Eulerian coordinates)	11
1.7 Navier-Stokes equation of motion for a compressible fluid with viscosity constant	18
1.8 Navier-Stokes equation of motion for an incompressible fluid	21
1.9 Navier-Stokes equation of motion for on incompressible fluid with viscosity constant	24
1.10 Lagrangian equations for motion	27
1.11 Rotating frames of reference (Eulerian coordinates)	27
1.12 Boundary layer theory, the Prandtl equations	29
1.13 Energy equation	32
1.14 Energy equation in terms of enthalpy and for a perfect gas	35
1.15 The dissipation function	36
1.16 Energy equation and entropy production	37
1.17 Integral forms of the basic equations (for a control volume)	38
1.18 Integral forms of the basic equations for channel flow with uniform properties and velocity over the cross section of the channel	40
1.19 Stream function	41
1.20 Velocity potential	42
1.21 Potential flow	43
1.22 Vorticity and circulation	44
1.23 Linearized perturbation theory	46
1.24 Acoustic wave equations	47
1.25 Slow motion and lubrication theory	48
1.26 Rankine-Hugoniot relationships (normal shock functions)	49
1.27 Turbulence (turbulent Reynolds equations)	50
1.28 Similarity and common dimensionless parameters	51
1.29 List of symbols used in Chapter 1	52
1.30 List of references	54
Chapter 2 Elasticity	55
2.1 Strain relationships	55
2.2 Stress relationships	60
2.3 Stress-strain relationships, Hooke's law	61
2.4 Relationships between the elastic constants	66
2.5 Equations of equilibrium, homogeneous isotropic media	68
2.6 Compatibility equations	72
2.7 Stress functions in two dimensions	75
2.8 Stress functions in three dimensions	76
2.9 Thermal stresses	78
2.10 Strain energy	79
2.11 Wave propagation	79
2.12 Torsion of cylinders	80
2.13 Thick wall cylinders	82
2.14 Thick wall spheres	82
2.15 Theory of thin plates	82

2.16	Simple beam theory	83
2.17	Simple column theory	87
2.18	Combined stresses in two dimensions and Mohr's circle	87
2.19	Mohr's circle for two dimensional strain	89
2.20	List of symbols used in Chapter 2	90
2.21	List of references	90
Chapter 3	Electromagnetic Theory	92
3.1	Maxwell's equations	93
3.2	Constitutive equations	96
3.3	Ohm's law and currents	97
3.4	Potentials	97
3.5	Wave equations	98
3.6	Boundary conditions	99
3.7	Maxwell's equations for moving media	100
3.8	Lorentz transformations	101
3.9	Lorentz transformations	102
3.10	Constitutive equation in moving media	102
3.11	Ohm's law for moving media	103
3.12	Lorentz force on a charged particle	104
3.13	Body force in material media (stationary)	105
3.14	Maxwell stress tensor (rest frame only)	106
3.15	Force in moving media	109
3.16	Force on a control volume or body	110
3.17	Poynting's theorem	110
3.18	Complex form of Poynting's theorem	111
3.19	Integral form of Maxwell's equations	111
3.20	Covariant (four dimensional) formulation of Maxwell's equations	112
3.21	Energy relationships of the electromagnetic field	113
3.22	Magnetohydrodynamics	114
3.23	Plasma dynamics	117
3.24	The basic equations in various systems of units	118
3.25	List of symbols used in Chapter 3	121
3.26	List of references	122
Chapter 4	Dynamics	123
4.1	Kinematics	123
4.2	Orthogonal transformations of coordinates	128
4.3	Eulerian angles	129
4.4	Moving frames of reference	130
4.5	Coefficient of restitution	133
4.6	The inertia tensor	133
4.7	Dynamics of rigid bodies	135
4.8	Lagrange's equations	140
4.9	Hamilton's equations	141
4.10	Hamilton's principle	141
4.11	List of symbols used in Chapter 4	142
4.12	list of references	143
