

Contents

1	INTRODUCTION	1
1.1	Energy and society	1
1.2	Energy crises	2
1.3	Energy consumption	3
1.4	Energy economics	8
1.5	Energy problems	10
1.6	The energy issue	12
2	THE HISTORY OF ENERGY USE	15
2.1	Introduction	15
2.2	Coal technology	17
2.3	The steam engine	18
2.4	Coal and natural gas	21
2.5	Wind energy	21
2.6	Electricity	22
2.7	Petroleum	22
2.8	The internal combustion engine	23
2.9	Solar energy	24
2.10	Comparison of power machines	24
2.11	The history of fuel use	25
3	PRINCIPLES OF ENERGY AND THERMODYNAMICS	31
3.1	Energy conversion	31
3.2	Conservation of energy	34
3.3	Entropy	37

- 3.4 Available work 40
- 3.5 Power 40
- 3.6 Energy flow 44

4 PROJECTIONS OF ENERGY CONSUMPTION _____ 51

- 4.1 Compound growth 51
- 4.2 Exponential growth 52
- 4.3 Use of energy in the U.S. 56
- 4.4 Forecasts of U.S. energy consumption 58
- 4.5 Energy supply for the world 62

5 NATURAL AND SYNTHETIC GAS _____ 67

- 5.1 Natural gas in the U.S. 68
- 5.2 World consumption of natural gas 72
- 5.3 Gas reserves in the U.S. 72
- 5.4 World gas resources 75
- 5.5 Conservation of natural gas 79

6 COAL _____ 89

- 6.1 Introduction 89
- 6.2 Coal production in the U.S. 90
- 6.3 Coal resources 92
- 6.4 Distribution of coal in the U.S. 95
- 6.5 The mining and transportation of coal 95

- 6.6 Economics 104
- 6.7 Coal gasification 104
- 6.8 Coal as a fuel for the next 100 years 108

7 PETROLEUM _____ **115**

- 7.1 Consumption and production of petroleum 115
- 7.2 Use of petroleum in the U.S. 117
- 7.3 Petroleum resources 118
- 7.4 The processing of petroleum 122
- 7.5 The oil industry 123
- 7.6 The oil-producing nations and OPEC 125
- 7.7 Oil-producing nations outside the Middle East 127
- 7.8 U.S. oil policy 128
- 7.9 Offshore oil 128
- 7.10 Other sources 132

8 ELECTRICITY _____ **137**

- 8.1 History of electric power 137
- 8.2 Consumption of electricity in the U.S. 139
- 8.3 Consumption of electricity in the world 140
- 8.4 Structure of the electric power industry in the U.S. 144
- 8.5 The economics of electric power 154
- 8.6 Environmental considerations 159
- 8.7 Summary and the future 161

9	TRANSPORTATION AND ENERGY	165
9.1	Automobiles and railroads	165
9.2	Energy use in transportation	168
9.3	The automobile and energy conservation	171
9.4	Airplane energy consumption	176
10	ENERGY AND AGRICULTURE	185
10.1	Output and productivity	186
10.2	Energy use	189
10.3	An appropriate technology	196
11	HYDROELECTRIC POWER GENERATION	201
11.1	Introduction	201
11.2	The hydroelectric power plant	201
11.3	Hydroelectric power in the U.S.	206
11.4	Hydroelectric generating plants in the U.S.	208
11.5	Hydroelectric generating capacity in the world	208
11.6	Pumped-storage plants	210
11.7	Economics of hydroelectric power plants	210
11.8	Environmental effects of hydropower plants	211
12	NUCLEAR FISSION POWER	217
12.1	The fission process	218
12.2	Nuclear reactors	219

- 12.3 The breeder reactor 225
- 12.4 Net energy from a reactor 228
- 12.5 Economics of nuclear energy 228
- 12.6 Radiation 230
- 12.7 The national nuclear debate 243
- 12.8 Nuclear power in the world 247

13 NUCLEAR FUSION POWER _____ **253**

- 13.1 The fusion reaction 254
- 13.2 Achieving positive net energy 255
- 13.3 Laser fusion 259
- 13.4 Radioactivity 260
- 13.5 The Pacer power system 260
- 13.6 Engineering of a fusion reactor 260
- 13.7 Environmental effects 261

14 ENERGY FROM THE WIND AND OCEANS _____ **265**

- 14.1 History of the use of wind energy 265
- 14.2 Windmills in the U.S.A. 267
- 14.3 Wind-power electric generators in Europe 270
- 14.4 Advantages and the potential for wind-power machines 270
- 14.5 New versions of the vertical windmill 273
- 14.6 A wind generator for every home 276
- 14.7 Proposed large wind-driven generating schemes 277
- 14.8 The economics of wind power 278

- 14.9 Energy stored in the oceans 279
- 14.10 Economics of tidal-powered plants 285

15 GEOTHERMAL ENERGY _____ **289**

- 15.1 Introduction 289
- 15.2 Geothermal reservoirs 289
- 15.3 Use of geothermal energy 291
- 15.4 Expanded geothermal energy use 293
- 15.5 Types of geothermal sources 293
- 15.6 Economics of geothermal power plants 299

16 ENERGY FROM WASTES _____ **305**

- 16.1 Recycling of waste products 305
- 16.2 Combustion of wastes 306
- 16.3 Incinerators as steam boilers 307
- 16.4 Waste matter as a supplement to fossil fuel 308
- 16.5 Synthetic fuels from wastes 309
- 16.6 Organizing for fuel from wastes 311

17 SOLAR ENERGY _____ **315**

- 17.1 Introduction 315
- 17.2 Solar energy reaching the earth 315
- 17.3 Why consider the direct use of solar energy? 316
- 17.4 The history of the use of solar energy 317
- 17.5 Collectors for solar radiation 319
- 17.6 Solar thermal energy 322

- 17.7 Solar heating and cooling of buildings 326
- 17.8 Photovoltaic solar systems 330
- 17.9 Satellite solar power stations 331
- 17.10 Solar energy utilization throughout the world 334

18 HYDROGEN—AN ENERGY CARRIER FOR THE 21ST CENTURY _____ 339

- 18.1 Hydrogen as a carrier 340
- 18.2 Storage of hydrogen 344
- 18.3 Hydrogen as a fuel 345
- 18.4 The safety of using hydrogen 347
- 18.5 Production of hydrogen 347
- 18.6 The economics of hydrogen production 349

19 ALTERNATIVE CONVERSION AND STORAGE SYSTEMS _____ 353

- 19.1 Biomass fuel systems 353
- 19.2 Magnetohydrodynamics 355
- 19.3 Fuel cells 357
- 19.4 Energy storage systems 359
- 19.5 Total energy systems 364

20 CONSERVATION OF ENERGY _____ 369

- 20.1 Introduction 369
- 20.2 Energy and standard of living 371
- 20.3 Efficiency of energy utilization 372
- 20.4 Transportation 378

- 20.5 Conservation of electricity 378
- 20.6 Energy conservation through building design 381
- 20.7 Recycling 386
- 20.8 Total energy systems 388
- 20.9 Economics and conservation 389
- 20.10 A plan for conservation 391

21 ENERGY AND ECONOMICS _____ **397**

- 21.1 Introduction 397
- 21.2 Gross national product and employment 399
- 21.3 Elasticity of demand and supply 401
- 21.4 Net energy 404
- 21.5 The price of energy 406
- 21.6 Trade and the economy 408
- 21.7 Capital costs of public utilities 409
- 21.8 Public utility rates 412
- 21.9 The structure of the energy industry 414
- 21.10 Methods for controlling gasoline consumption 416

22 ENERGY AND THE ENVIRONMENT _____ **421**

- 22.1 Environmental impacts 421
- 22.2 Social impacts 423
- 22.3 Environmental and social controls 423
- 22.4 Pollution factors 424
- 22.5 Costs of environmental control 429

23 ENERGY POLICY	433
23.1 Policy issues	433
23.2 Project Independence	434
23.3 The U.S. Federal Energy Organization	435
23.4 Energy research and development	439
23.5 State energy policy	440
23.6 Energy policy in Europe	441
24 INTERNATIONAL FACTORS	445
24.1 World energy consumption	445
24.2 A transition to the future	448
24.3 World energy resources	450
24.4 Energy and U.S. foreign policy	456
25 SUMMARY, CONCLUSIONS AND THE FUTURE	461
25.1 A summary	461
25.2 Growth and society	463
25.3 The future of energy and economics	464
25.4 Diversity and simplicity	465
APPENDIXES	467
A Energy-related terms	467
B Selected data and conversion factors	479
INDEX	481
