PREFACE v

1 INTRODUCTION 1

2 FORCES, COMPONENTS, RESULTANTS, FREE-BODY DIAGRAMS 6

§ 2.1 Definition of Force, 6. § 2.2 Force Resultants, 7. § 2.3 Resultants by Components, 9. § 2.4 Use of Unit Base Vectors, 12. § 2.5 Examples of Force Analysis. Free-Body Diagrams, 12. PROBLEMS, 17.

3 DISPLACEMENT AND MOTION IN ONE DIMENSION 26

PROBLEMS, 32.

4 MOTION IN TWO DIMENSIONS 38

§ 4.1 Motion in Two Dimensions, Rectangular Coordinates, 38. § 4.2 Motion in a Circle, 44. § 4.3 Polar Coordinates—Radial and Transverse Components, 49. § 4.4 Simple Harmonic Motion, 53. PROBLEMS, 56.

5 NEWTON'S LAWS OF MOTION 68

§ 5.1 Newton's Laws of Motion for a Particle, 68. § 5.2 Units, 71. § 5.3 Straight-Line Motion, 73 § 5.4 Simple Harmonic Motion Analysis, 78. § 5.5 Curvilinear Motion in a Plane, 80. § 5.6 Central Force Motion; Satellites, 88. PROBLEMS, 95.

6 WORK AND ENERGY 107

§ 6.1 Work and Energy for Straight-Line Motion, 107. § 6.2 Work and Energy for Curvilinear motion, 118. § 6.3 Potential Energy, 125. § 6.4 Conservation of Mechanical Energy, 130. § 6.5 Friction, 135. PROBLEMS, 142.

7 LINEAR IMPULSE AND MOMEMTUM 156

§ 7.1 Linear Impulse and Linear Momentum in One Dimension, 156. § 7.2 Linear Impulse and Linear Momentum in Two Dimensions, 166. § 7.3 Fluid Streams and Rockets, 172. § 7.4 Gas Pressure and Temperature, 176. PROBLEMS, 177.

8 RIGID BODY EQUILIBRIUM 190

§ 8.1 Moments and Couples, 190. § 8.2 Analysis of Systems of Forces in Equilibrium, 206. § 8.3 Continuously Distributed Force Systems, 219 PROBLEMS, 231.

9 VIRTUAL WORK, STABILITY OF EQUILIBRIUM 243

§ 9.1 Principle of Virtual Work, 243. § 9.2 Stability of Equilibrium, 252. PROBLEMS, 262.

10 ANGULAR IMPULSE, ANGULAR MOMENTUM, AND ROTATION 269

§ 10.1 Principle of Angular Momentum for a Particle, 269. § 10.2 Satellite Motion, 273. § 10.3 Angular Momentum of a Rigid Body, 277. § 10.4 Calculation of Rotational Inertia for Simple Rigid Bodies by Integration, 279. § 10.5 Parallel Axis Theorem and Composite Bodies, 283. § 10.6 Second Moments of Area, 285. PROBLEMS, 289.

11 RELATIVE MOTION IN TWO DIMENSIONS 296

§ 11.1 Introductory Comments, 296. § 11.2 Relative Motion-Translating Axes, 298. § 11.3 Relative Angular Motion, 301. § 11.4 Vector Representation of Rotation Quantities, 303. § 11.5 Motion Relative to Rotating Coordinates, 305. § 11.6 Relative Motion Between Points in the Same Rigid Body, 310. PROBLEMS, 311

12 KINEMATICS OF RIGID BODIES IN TWO DIMENSIONS 327

§ 12.1 Rigid Body Motion, 327. § 12.2 Translational Motion, 329. § 12.3 Rotational Motion, 329. § 12.4 General Plane Motion—Flat Surface Rolling, 330. § 12.5 General Plane Motion—Curved Surface Rolling, 333. § 12.6 Instantaneous Velocity Centers, 337. § 12.7 Further Examples Involving Plane Motion, 340. PROBLEMS, 349.

13 TWO-DIMENSIONAL RIGID BODY DYNAMICS —NEWTON'S LAWS 361

§ 13.1 Introductory Comments, 361. § 13.2 Motion of the Center of Mass of a System of Particles, 361. §13.3 Rigid Body Translation, 364. § 13.4 Rotation of a Rigid Body About a Fixed Axis, 372. § 13.5 Plane Motion of Rigid Bodies, 378. PROBLEMS, 383.

14 SYSTEMS WITH OSCILLATORY MOTION 397

§ 14.1 Introduction, 397. § 14.2 Oscillatory Systems for Particles, 400. § 14.3 Oscillatory Systems Containing Rigid Bodies, 406. PROBLEMS, 417.

15 INFLUENCE OF FRICTION ON EQUILIBRIUM AND MOTION 427

§ 15.1 Static and Kinetic Friction, 427. § 15.2 Friction Problems Involving Rigid Bodies, 432. § 15.3 Continuously Distributed Friction Forces, 444. § 15.4 Viscous Resistance, 448. § 15.5 Damped Vibrations, 450. § 15.6 Forced Vibrations, 452. PROBLEMS, 455.

16 WORK-ENERGY ANALYSIS OF TWO-DIMENSIONAL SYSTEMS 464

§ 16.1 Principle of Work and Kinetic Energy for a System of Particles, 464. § 16.2 Kinetic Energy of Rigid Bodies in Two-Dimensional Motion, 467. § 16.3 Systems of Rigid Bodies Analyzed by the Work-Energy Method, 470. § 16.4 Energy Analysis of Nonconservative Systems, 476. § 16.5 Energy Principles Applied to Analysis of Damped Forced Oscillations, 480. PROBLEMS, 481.

17 IMPULSE MOMENTUM ANALYSIS OF TWO-DIMENSIONAL SYSTEMS 493

§ 17.1 Principle of Linear Momentum for a System of Particles, 493. § 17.2 Principle of Angular Momentum for a System of Particles, 495. § 17.3 Application of Momentum Principles to Rigid Body Motion Problems, 499. PROBLEMS, 510.

18 EQUILIBRIUM ANALYSIS IN THREE DIMENSIONS 522

§ 18.1 Vectors in Space, 522. § 18.2 Equilibrium of Rigid Bodies in Three Dimensions, 527. § 18.3 Distributed Forces and Stresses for Bodies in Equilibrium, 535. § 18.4 Fluids in Equilibrium, 543. PROBLEMS, 546.

19 KINEMATICS IN THREE DIMENSIONS 561

§ 19.1 Kinematics of a Particle in Three Dimensions, 561. § 19.2 Rotating Frames of Reference, 564. § 19.3 Kinematics of Rigid Bodies in Three Dimensions, 567. § 19.4 Spherical Coordinates, 575. § 19.5 Moments and Products of Inertia of Rigid Bodies, 578. § 19.6 Parallel Axis Theorem, 581. § 19.7 Kinetic Energy of a Rigid Body Rotating about a Fixed Point, 583. § 19.8 Angular Momentum of a Rigid Body Rotating about a Fixed Point, 584. § 19.9 Kinetic Energy of a Rigid Body in General Three-Dimensional Motion, 585. § 19.10 Angular Momentum of a Rigid Body in General Three-Dimensional Motion, 586. § 19.11 Work and Potential Energy in Three Dimensions, 587. PROBLEMS, 591.

20 DYNAMICS IN THREE DIMENSIONS 606

§ 20.1 Introduction, 606. § 20.2 Euler's Equations of Motion for Fixed Point Rotation, 606. § 20.3 Alternative Form of Euler's Equations for Bodies of Revolution, 614. § 20.4 Tops and Gyroscopes, 616. PROBLEMS, 621.

APPENDIX I Properties of Plane Sections 631

APPENDIX II Properties of Homogeneous Bodies 637

APPENDIX III Fundamental Operations of Unit Vectors 643

ANSWERS TO ODD-NUMBERED PROBLEMS 651
