

Contents

1. *The federal water pollution control act amendments of 1972 and related legislation*

Introduction	
The Interim Guidelines	2
Application of Effluent Limitations	3
Rationale for Development of Interim Effluent Limitations	6
Sampling and Monitoring Requirements	
Consideration of Effluent Limitations	7
Summary	9

2. *Characterization of wastes from mineral resource based industries*

Mining Industry	
<i>Solid Wastes</i> ..	
<i>Liquid Wastes</i> ..	12
<i>Gaseous Wastes</i>	
Milling Industry	3
<i>Solid Wastes</i> ..	
<i>Liquid Wastes</i> ..	13
<i>Gaseous Wastes</i>	14
Metallurgical Industry	14
<i>Solid Wastes</i> ..	14
<i>Liquid Wastes</i> ..	14
<i>Gaseous Wastes</i>	15

3. *Methods of waste and waste water treatment available to mineral resource industries*

Introduction	16
Sedimentation	17
Coagulation	19
Control of pH	21
<i>Mixing</i>	21
<i>pH Control with Limestone</i>	22
<i>pH Control with Lime</i>	23
Aeration	25
Thickening	25
Flotation	27
Reverse Osmosis	27
<i>Neutrololisis of Brine from Reverse Osmosis</i>	28
Ion Exchange	29
Ozone Oxidation	30
Chemical Fixation	30
Minimizing Waste Water Production	30
Sources of Cost Information	35
Solid Waste Disposal	35

4. *Acid mine drainage*

Introduction	38
Formation of Acid Mine Drainage	40
Methods of Treating or Abating Acid Mine Drainage ..	42
<i>Abatement of Acid Mine Drainage at Its Source</i> ..	44
Mine Sealing	44
Control of Ground-Water Recharge to the Mine	45
<i>Distribution of Acid Water</i>	
<i>Source of Ground-Water Recharge</i>	
Dewatering Ground-Water Flow Systems	
<i>Containment of Acid Mine Drainage</i>	
Deep-Well Injection	
Impoundment	
<i>Dilution of Acid Mine Drainage</i>	
<i>Waste Water Treatment Techniques</i>	
Neutralization	
<i>Other Methods</i>	
Reverse Osmosis	
Silicate Treatment	

Summary of Costs and Influencing Factors . . .	66
<i>Neutralization</i>	66
Lime and Limestone	66
Other Alkalis	73
<i>Reverse Osmosis</i>	73
<i>Deep-Well Injection</i>	76
<i>Well Dewatering</i>	79
<i>Mine Sealing</i>	81
<i>Cost of Control of Ground-Water Recharge</i>	81

5. *Bauxite refining and aluminum smelting*

Sources of Information	86
Refining of Bauxite (SIC 2819)	86
<i>Water Use</i>	90
Spent Liquor	92
Condensates	92
Barometric Condenser Cooling Water	93
Miscellaneous Cooling Water Streams	93
Cleaning Acid Wastes	94
<i>Water Balance in a Bauxite Refinery</i>	
Water Gains	
Water Losses	94
<i>Drying and Calcining</i>	94
<i>Red Mud</i>	95
<i>Evaporative Cooling of Green Liquor</i>	95
<i>Concentration of Spent Liquor</i>	95
<i>Evaporation from Lakes</i>	95
<i>Seepage</i>	95
<i>Red Mud Calcination</i>	96
<i>Air Pollution Control</i>	96
<i>Characteristics of Red Mud Wastes</i>	96
<i>Pollution Control</i>	98
Water	98
<i>Construction of Mud Lakes</i>	100
<i>Proposed Treatment Technology</i>	103
Costs of Impounding and Recycling Bauxite Refinery Wastes	103
<i>Regulations Promulgated for Bauxite Refining</i>	103
Effluent Limitations Guidelines Representing the Degree of Effluent Reduction Attainable by the Application of the Best Practicable Control Technology Currently Available	106

Effluent Limitations Guidelines Representing the Degree of Effluent Reduction Attainable by the Application of the Best Available Technology Economically Achievable	106
Standards of Performance for New Sources	106
Primary Aluminum Smelting (SIC 3334)	106
<i>Sources of Information and Data</i>	107
<i>Reduction of Alumina to Primary Aluminum</i>	107
Prebaked Anode System	109
Soderberg Anode System	109
Electrolyte	109
<i>Waste Water Production</i>	110
Primary Potline Air Wet Scrubbers	112
Secondary Pot Room Air Wet Scrubbers	112
Anode Bake Plant Air Wet Scrubbers	112
Cast House Air Scrubbers	113
Cooling Water	113
<i>Proposed Treatment Technology</i>	116
Proposed Best Practicable Control Technology	
Currently Available	120
Proposed Best Available Technology Economically Achievable	122
New Source Technology	122
<i>Cost</i>	122
Present Practices	122
<i>Potline (Primary) Gas Scrubber Water</i>	124
<i>Pot Room (Secondary) Gas Scrubber Water</i>	126
<i>Anode Bake Plant</i>	126
<i>Cast House Cooling</i>	126
Costs of Additional Treatment Processes	126
<i>Potline Scrubber Water Treatment</i>	126
<i>Alum Treatment</i>	127
<i>Activated Alumina</i>	127
<i>Regulations Promulgated for Primary Aluminum Smelting</i>	127
Effluent Limitations Guidelines Representing the Degree of Effluent Reduction Attainable by the Application of the Best Practicable Control Technology Currently Available	
Effluent Limitations Guidelines Representing the Degree of Effluent Reduction Attainable by the Application of the Best Available Technology Economically Achievable . . .	128
Standards of Performance for New Sources	128
Secondary Aluminum Smelting (SIC 3341)	128
<i>Sources of Data and Information</i>	128
<i>Description of Processes</i>	128
Smelting	132

Magnesium Removal (Demagging)	132
Skimming	133
Pouring and Cooling	136
<i>Proposed Control and Treatment of Waste Water</i>	137
<i>Waste Water from Metal Cooling</i>	
<i>Waste Water from Fume Scrubbing</i>	139
<i>The Derham Process</i>	141
<i>The Alcoa Process</i>	141
<i>The Teller Process</i>	141
<i>Treatment of Wet Fume Scrubber Effluent</i>	142
<i>Waste Water from Residue Milling</i>	142
<i>Levels of Treatment and Associated Costs</i>	143
Capital Investment Calculations	143
Operating Cost Calculations	143
<i>Proposed Best Practicable Control Technology Currently</i>	
<i>Available for Waste Water from Metal Cooling, and Costs</i> ...	144
<i>Proposed Best Practicable Control Technology Currently</i>	
<i>Available for Waste Water from Fume Scrubbing, and Costs</i> .	145
<i>Proposed Practicable Control Technology Currently Available</i>	
<i>for Waste Water from Residue Milling</i>	147
<i>Proposed Best Available Treatment Control Technology</i>	
<i>Economically Achievable for Waste Water from Metal</i>	
<i>Cooling, and Costs</i>	150
<i>Proposed Best Available Treatment Control Technology</i>	
<i>Economically Achievable for Waste Water from Fume</i>	
<i>Scrubbing, and Costs</i>	150
<i>Proposed Best Available Treatment Control Technology</i>	
<i>Economically Achievable for Waste Water from Residue</i>	
<i>Milling, and Costs</i>	151
<i>Regulations Promulgated for Secondary Aluminum Smelting</i> ...	152

Reduction Attainable by the Application of the Best	
Practicable Control Technology Currently Available ...	152
Effluent Limitations Guidelines Representing the Degree of	
Effluent Reduction Attainable by the Application of the	
Best Available Technology Economically Achievable ...	154
Standards of Performance for New Sources	154

6. *Phosphate fertilizer industry*

Sources of Information	156
Status of Industry	156

Phosphate Fertilizer Processes	157
<i>Sulfuric Acid</i>	157
<i>Phosphate Rock Grinding</i>	158
<i>Phosphate Rock Digestion and Filtration (Acidulation)</i>	159
<i>Phosphoric Acid Concentration</i>	159
<i>Phosphoric Acid Clarification</i>	160
<i>Normal Superphosphate</i>	160
<i>Triple Superphosphate</i>	160
<i>Ammonium Phosphate</i>	161
Sources of Waste Water and Effluent Control Technologies	162
<i>Sulfuric Acid Water Treatment Plant Effluents</i>	162
<i>Closed-Loop Cooling Tower Blowdown</i>	162
<i>Boiler Blowdown Water</i>	163
<i>Recycled Gypsum Pond Water</i>	164
<i>Process Makeup Water</i>	165
<i>Non-Point Source Discharges</i>	166
<i>Pond Seepage</i>	166
<i>Contaminated Water (Gypsum Pond Water) Treatment System</i>	167
Pollutant Parameters	169
Deep-Well Injection	169
Costs	170
Phosphate Slimes	170
Proposed Best Practicable Control Technology Currently Available and Proposed Guidelines	173
<i>Gypsum Pond Contaminated Water System</i>	173
<i>Ammonium Phosphate Self-Contained Process</i>	174
<i>Sulfuric Acid Plant Effluent Control</i>	174
<i>Recommended Effluent Limitations Guidelines</i>	174
Proposed Best Available Technology Economically Achievable ..	175
Proposed New Source Performance Standards	175
Discharge Regulations Promulgated by EPA	176
<i>Effluent Limitations Guidelines Representing the Degree of Effluent Reduction Attainable by the Application of the Best Practicable Control Technology Currently Available</i>	176
<i>Effluent Limitations Guidelines Representing the Degree of Effluent Reduction Attainable by the Application of the Best Available Technology Economically Achievable</i>	76
<i>New Source Performance Standards Promulgated by the Environmental Protection Agency</i>	

7. Iron and steel industry and coke manufacturing

Segments Considered and Sources of Information	178
Processes	178
Sources and Characteristics of Wastes and Waste Waters	180
<i>By-Product Coke Process</i>	181
<i>Burden Preparation</i>	184
Sintering	184
<i>Iron Manufacturing (Blast Furnaces)</i>	185
<i>Steel Manufacturing</i>	189
Basic Oxygen Process	189
Open Hearth Process	190
Electric Arc Process	191
Vacuum Degassing	193
Continuous Casting	194
Ingot Casting	195
Pig Casting	195
Slagging	195
Significant Pollutants in Steel Industry Wastes	196
<i>Coke Making</i>	196
<i>Sintering</i>	196
<i>Iron Making</i>	196
<i>Steel Making</i>	196
<i>Vacuum Degassing</i>	197
<i>Continuous Casting</i>	197
Control and Treatment Technologies	197
Best Practicable Control Technology Currently Available	
and Its Costs	210
<i>Technology and Standards Recommended by Rice (1974)</i>	210
<i>Regulations Promulgated by EPA</i>	211
<i>By-Product Coke Plants</i>	211
<i>Sintering Plants</i>	211
<i>Blast Furnaces (Iron)</i>	211
<i>Blast Furnaces (Ferromanganese)</i>	211
<i>Steel Making by Basic Oxygen Process and</i>	
<i>Electric Arc Furnaces</i>	211
<i>Steel Making by Basic Oxygen Process, Open</i>	
<i>Hearth Furnaces, and Electric Arc Furnaces</i>	211
<i>Vacuum Degassing of Steel</i>	211
<i>Continuous Casting of Steel</i>	211
Best Available Technology Economically Achievable and Its Costs	221
<i>Technology and Standards Recommended by Rice (1974)</i>	221
<i>Regulations Promulgated by EPA</i>	221

<i>By-Product Coke Plants</i>	221
<i>Sintering Plants</i>	221
<i>Blast Furnaces (Iron)</i>	221
<i>Blast Furnaces (Ferromanganese)</i>	221
<i>Steel Making by Basic Oxygen Process and</i> <i>Electric Arc Furnaces</i>	221
<i>Steel Making by Basic Oxygen Process</i>	221
<i>Steel Making by Open Hearth Furnaces</i>	221
<i>Steel Making by Electric Arc Furnaces</i>	221
<i>Vacuum Degassing of Steel</i>	222
<i>Continuous Casting of Steel</i>	222
New Source Performance Standards	222
<i>Standards Recommended and Rationale Presented by Rice (1974)</i>	222
Coke By-Product Production	222
Sintering	223
Blast Furnace (Iron) and Blast Furnace (Ferromanganese) ..	223
Steel Making	223
Vacuum Degassing	235
Continuous Casting of Steel	235
<i>Regulations Promulgated by EPA</i>	235

8. *Ferroalloy industry*

Sources of Information	238
Ferroalloys	238
Raw Materials	240
Submerged Arc Electric Furnaces	241
Exothermic Processes	241
Electrolytic Processes	247
<i>Electrolytic Manganese</i>	247
<i>Electrolytic Chromium</i>	247
Recovery of Metals from Slag	247
Product Sizing and Handling	248
Factors Affecting Quantities of Emissions	248
Waste Characterization	249
Critical Constituents	255
Control and Treatment Technology	263
<i>Category I: Open Electric Furnaces with Wet Air</i> <i>Pollution Control Devices</i>	271
<i>Category II: Covered Electric Furnaces and Other Smelting</i> <i>Operations with Wet Air Pollution Control Devices</i> ..	271

<i>Category III: Slag Processing</i>	271
<i>Category IV: Noncontact Cooling Water</i>	271
Recommended Effluent Loadings for BPCTCA and BATEA	272
Startup and Shutdown Problems	272
Costs	272
<i>Category I</i>	272
<i>Category II</i>	277
<i>Category III</i>	277
<i>Category IV</i>	277
Incremental Costs of Achieving Levels of Treatment Technology	277
<i>Category I</i>	277
<i>Category II</i>	278
<i>Category III</i>	278
<i>Category IV</i>	278
Air and Solid Wastes	278
Regulations Promulgated by EPA	279
<i>Open Electric Furnaces with Wet Air</i>	
<i>Pollution Control Devices</i>	279
<i>Covered Electric Furnaces and Other Smelting Operations</i>	
<i>with Wet Air Pollution Control Devices</i>	279
<i>Slag Processing</i>	282

9. Recovery of copper, lead, and zinc

Sources of Information	283
Primary Copper	284
<i>The Industry</i>	284
<i>The Process</i>	284
<i>Sources and Characteristics of Wastes</i>	285
Smelting	287
Refining	290
Hydrometallurgy	294
Air Pollution Control Equipment and Sulfuric Acid Plants	296
Waste Characterization	297
<i>Proposed Best Practicable Control Technology Currently</i>	
<i>Available, Effluent Limitations Guidelines, and Costs</i>	299
Smelting	300
Refining	305
Hydrometallurgy	307
Cooling Water	307
<i>Noncontact Cooling</i>	307

<i>Contact Cooling for Anode and Product Casting</i>	308
Sludge Production and Disposal	308
<i>Proposed Best Available Technology Economically Achievable, Effluent Limitations Guidelines, and Costs</i>	309
Smelting	309
Refining	310
Hydrometallurgy	311
<i>New Source Performance Standards</i>	311
Primary Lead	312
<i>The Industry</i>	312
<i>Processes and Sources of Wastes and Waste Waters</i>	312
Smelting	313
<i>Charge Preparation</i>	313
<i>Sintering</i>	313
<i>Blast Furnace</i>	317
Refining	318
Summary of Waste Water Production	320
<i>Available Control and Treatment Technologies</i>	323
<i>Proposed Best Practicable Control Technology Currently Available, Effluent Limitations Guidelines, and Costs</i>	325
<i>Proposed Best Available Technology Economically Achievable, Effluent Limitations Guidelines, and Costs</i>	329
<i>Proposed New Source Performance Standards and Costs</i>	330
Primary Zinc	331
<i>The Industry</i>	331
<i>Processes and Sources of Wastes and Waste Waters</i>	331
Concentrate Preparation	331
Roasting	335
Sintering and Briquetting (Pyrolytic Process)	337
Pyrolytic Reduction	338
Zinc Reduction by Electrolysis	339
<i>Leaching</i>	339
<i>Purification</i>	340
<i>Zinc Electrolysis and Stripping</i>	340
<i>Cadmium Recovery</i>	341
Refining, melting, and casting	341
Waste Waters Produced by Auxiliary Operations	342
Acid Plants	342
Summary of Characteristics of Primary Zinc Recovery Wastes	
<i>Available Control and Treatment Technology</i>	
<i>Proposed Best Practicable Control Technology Currently Available, Effluent Limitations Guidelines, and Costs</i>	

<i>Proposed Best Available Technology Economically Achievable, Effluent Limitations Guidelines, and Costs</i>	352
<i>Proposed New Source Performance Standards</i>	354
Additional Approaches to Treating Smelter Wastes	354

10. *Mill wastes*

Sources of Information	357
The Process and the Wastes	357
Waste Characteristics and Disposal	360
<i>Solid Wastes</i>	360
<i>Liquid Wastes</i>	362

11. *Production and disposal of mineral resource solid wastes*

Introduction	364
Site Selection	365
<i>Topography</i>	366
<i>Hydrogeology</i>	368
<i>Construction Materials</i>	372
<i>Hydrology</i>	373
<i>Seismic Conditions</i>	373
<i>Meteorological Conditions</i>	374
Tailings Disposal	375
<i>Introduction</i>	375
<i>General Design Considerations</i>	376
<i>Upstream Construction</i>	381
<i>Downstream Construction</i>	389
<i>Construction of Tailings Pond Embankments with Imported Materials</i>	390
<i>Construction and Operational Problems</i>	392
<i>Subaqueous Disposal of Mill Tailings</i>	393
<i>Uses of Tailings</i>	393
<i>Tailings as Backfill (Sandfill) for Abandoned Stopes</i>	394
Coal Mine Wastes	397
<i>Introduction</i>	397
<i>Origin of Wastes</i>	398
<i>Evaluation of Coal Refuse Embankments</i>	400
<i>Safe Disposal Practices</i>	402

12. *Mined area reclamation*

Classification of Reclamation Procedures	406
No Reclamation	406
Landscaping	409
<i>Coal Mining</i>	409
<i>Non-Coal Mining</i>	419
Soil Amelioration	421
Revegetation	421
Chemical and Physical Waste Stabilization	434
Reclamation for Alternative Uses	436
Legal Problems of Mined Area Reclamation	436
<i>Abandoned Mined Areas</i>	438
<i>Active Mining Operations</i>	439

Appendices

Appendix A—Portions of the Federal Water Pollution Control Act Amendments of 1972 (Public Law 92-500)	445
Appendix B—Test Procedures for the Analysis of Pollutants	448
Appendix C—Metric Units-English Units Conversion Table	451
Appendix D—Waste Discharge Permit for a Mining and Milling Operation in Idaho's Coeur d'Alene District	457
Appendix E—Treatment of a Combination Mining, Milling, and Metallurgical Waste Water	461
Appendix F—Treatment of Zinc Plant Wastes	472
Appendix G—Summary of State Surface Mining and Mined Land Reclamation Laws
