Nomenclature, xvii

PART I. FUNDAMENTALS

- Ores, Mills, and Concentrates, 5
 - 1.1. Economic Criteria, 5
 - 1.2. Flow Sheets, 8
 - 1.3. Materials Balances, 9
 - 1.4. Ores, 13
 - 1.5. Mineralogy, 17
- Characterization of Particles, 21
 - 2.1. Particle Size, 21
 - 2.2. Presentation of Size Distribution Data, 22
 - 2.3. Average Diameters, 27
 - 2.4. Particle Shape, 29
 - 2.5. Liberation, 32
 - 2.6. Determination of Particle Characteristics, 36
 - 2.7. Complete Particle Analysis, 43
- Analysis of Separation Processes, 46
 - 3.1. Equilibrium Separation, 47
 - 3.2. Kinetics: The Rate of Separation, 50
 - 3.3. Mixing Patterns, 52
 - 3.4. Determination of Separability Curves, 55
 - 3.5. Separation Efficiency, 56
- Fluid Dynamics, 62
 - 4.1. Characterization of Flow by Reynolds Number, 62
 - 4.2. Fluid Rheology, 64
 - 4.3. Friction Factors, 65
 - 4.4. Flow in Pipes, 66
 - 4.5. Flow of Bodies Through Fluids, 68
 - 4.6. Flow Through a Packed Bed, 75
 - 4.7. Fluidization and Sedimentation, 76
- Agitation, Mixing, and Particle Suspension, 82
- Flow of Liquid in Layers, 84
- Mechanisms and Processes of Particulate Separation, 87
 - 5.1. Hindered Settling, 87
 - 5.2. Differential Acceleration, 88
 - 5.3. Trickling, 88
 - 5.4. Differential Velocity in a Flowing Film, 88
 - 5.5. Shear, 90
 - 5.6. Segregation of Dry Particles, 91
 - 5.7. Center of Gravity, 92
 - 5.8. Separation Limits and Mixing, 93
 - 5.9. General Comments, 93
- Surfaces and Interfaces, 95
 - 6.1. Thermodynamics of Interfaces, 95
 - 6.2. Mechanisms of Interfacial Attachment, 107
- Mechanisms of Fracture, 113
 - 7.1. Single Particle Fracture, 113
 - 7.2. The Fracture Environment, 122

PART II. SIZE REDUCTION

- Crushing and Grinding, 127
 - 8.1. Equipment, 127
 - 8.2. Characteristics of Tumbling Mills, 135
 - 8.3. Circuits, 143
 - 8.4. Theory, 144
 - 8.5. Equipment Capacities, 157

PART III. SIZING SEPARATION

- Screening and Sieving, 169
 - 9.1. Laboratory or Test Sieving, 169
 - 9.2. Screening, 171

- 9.3. Screen Surfaces, 173
- 9.4. Auxiliary Features and Equipment, 179
- 9.5. Measurement of Screen Performance, 180
- 9.6. Factors Affecting Screening, 181
- 9.7. Theory of Conventional Screening and Sieving, 185
- 9.8. Theory of Probability Screening, 190
- 9.9. Theory of Sieve Bends, 192
- 9.10. Screen Sizing, 193

- 10. Classification, 199
 - 10.1. Equipment, 199
 - 10.2. Classifier Performance, 202
 - 10.3. Sedimentation Classifiers, 207
 - 10.4. Hydrocyclone Classifiers, 213
 - 10.5. Fluidized Bed (Hydraulic) Classifiers, 223
 - 10.6. Capacities, 225
 - 10.7. Closed Circuit Grinding, 226
 - 10.8. Classifier Operation, 229

- PART IV. CONCENTRATION SEPARATION**

- 11. Ore Sorting, 237
 - 11.1. Sorting Machines and Applications, 273
 - 11.2. Mechanics of Sorting, 238
 - 11.3. Ore Sortability, 241
- 12. Dense Medium Separation, 243
 - 12.1. Equipment and Applications, 243
 - 12.2. Medium Control and Recovery, 246
 - 12.3. Performance Curves, 248
- 13. Gravity Concentration, 250
 - 13.1. Equipment and Applications, 250
 - 13.2. Theories of Gravity Concentrating Devices, 261
 - 13.3. Performance Curves, 269
- 14. Magnetic Separation, 274
 - 14.1. Equipment and Applications, 274
 - 14.2. Principles and Mechanisms of Magnetic Separation, 280
 - 14.3. Magnetic Separator Performance, 286
- 15. Electrostatic Separation, 291
 - 15.1. Equipment and Applications, 291
 - 15.2. Operation Environment, 295
 - 15.3. Mechanisms of Electrostatic Separation, 296

- 16. Flotation and Other Surface Separations, 301
 - 16.1. Flotation Equipment, 301
 - 16.2. Chemistry of Flotation, 307
 - 16.3. Mechanics of Flotation, 314
 - 16.4. Flotation Operations, 317
 - 16.5. Other Surface Separations, 319

PART V. DEWATERING

- 17. Sedimentation, 327
 - 17.1. Sedimentation Equipment, 327
 - 17.2. Sedimentation Behavior, 330
 - 17.3. Steady State Operation of a Continuous Thickener, 335
- 18. Filtration, 343
 - 18.1. Filtration Equipment, 343
 - 18.2. Filtration Calculations, 348
- 19. Dewatering: Systems and Miscellaneous Methods, 356
 - 19.1. Centrifugal Separations, 356
 - 19.2. Mechanical Dewatering Systems, 358
 - 19.3. Thermal Dewatering (Drying), 359

PART VI. MATERIALS HANDLING

- 20. Dry Solids Handling, 367
 - 20.1. Stockpiles, 367
 - 20.2. Bins and Hoppers, 368
 - 20.3. Feeders, 374
 - 20.4. Transport of Bulk Solids, 375
 - 20.5. Sampling, 378
- 21. Slurry Handling, 380
 - 21.1. Pumps and Pumping, 380
 - 21.2. Agitated Tanks, 383
 - 21.3. Slurry Transportation, 387
- 22. Tailings Disposal, 390
 - 22.1. Tailings Ponds and Dams, 390
 - 22.2. Tailings Water, 392

PART VII PLANT PRACTICE

- 23. Process Integration and Flowsheet Analysis, 397
 - 23.1. Flowsheet Case Study, 397
 - 23.2. Selection Between Alternative Types of Separation Equipment, 399
 - 23.3. Roughing, Cleaning, and Scavenging, 400
 - 23.4. Plant Design, 405
- 24. Plant Control, 408
 - 24.1. Control Objectives, 408
 - 24.2. Principles of Automatic Process Control, 409

- 24.3. Instrumentation, 414
24.4. Control Applications, 416
- 25. Economics, 421**
- 25.1. Capital Costs, 421
25.2. Working Capital, 425
25.3. Operating and Production Costs, 426
25.4. Investment Worth, 427
25.5. Optimum Operating Capacity, 430
25.6. Concluding Remarks, 431
- Appendix A. Minerals and Their Characteristics, 433**
- Appendix B. Selected Plant Flow Sheets, 445**
- Appendix C. Standard Sieve Sizes, 460**
- Appendix D. Rosin-Rammler (Weibull) Graph Paper, 462**
- Appendix E. Magnetic Attractability of Minerals, 464**
- Appendix F. Separation Characteristics of Minerals, 466**
- Appendix G. Conveyor Belt Design Data, 468**
- Appendix H. Pump Selection Chart, 472**
- Appendix I. SI Units and Conversion Factors, 473**
- Index, 477**
