Part I—MATERIAL PROPERTIES

The Intensity and Distribution of Cracking in Ferro-Cement Panels Subject to Flexure *T E Buchner*

Limits of Investigation	17
Test Specimen and Apparatus	17
Test Procedure and Results	18
Discussion of Test Results	20
Conclusions	21

Dynamic Point Loading of Ferro-Cement, Glassfibre-reinforced Polyester and Plywood *H-P Pedersen*

Test Samples and Testing Equipment Described	22
Presentation of Test Results	23
Comparison of Hulls of Glassfibre Reinforced Polyester (GRP) and Ferro-Cement	25
Test Results in Relation to Strength of Panels in a Boat Structure	25
Conclusions	27

Concrete Technology in the Quality Control of Ferro-Cement Vessels

T G Kowalski and B R Walkus

Concrete Technology	27
Test Samples	28
Aggregates	28
Cements	29
Additives and Workability	29
Curing	29
Concrete Design Parameters	30
Construction Stages	31
Impact	32
Conclusion	32

Strength and Cracking of Ferro-Cement

S P Shah and M G Srinivasan

Uniaxial Tension	33
Uniaxial Compression	36
Flexure	37
Shear	38
Impact	38
Creep	39
Fatigue	39
Design Recommendations	39

Mechanical Properties of Ferro-Cement

S-L Lee, M Raisinghani and R P Pama

Properties of Ferro-Cement	40
Bending of Ferro-Cement	41
Experimental Investigation	43
Conclusions	49

Practical Ferro-Cement Design, Reinforced and Post-Tensioned

P E Ellen

Types of Reinforcement	51
Concretes	52
Strength Design—Bending Flexure	52
Crack Control	53
Tension Bond Values	53
Spacing of Mesh Layers	53
Sections in Pure Tension	54
Sections Subject to Bending Moments and Tensile Forces	54
Impact and Shear Values of Highly Reinforced Slabs	54
Basic Hull Design	55
Post-Tension Design	55
Additives to Concrete	56
Comments on Design	57
Conclusion	57
Appendix 1 Analysis of the Properties of Ferro-Cement Type Reinforcement	57

Definition of Ferro-Cement *G W Bigg*

Scope	60
Use of Engineering Terminology	61
Nature of Concrete Mortars	61
Definition of Ferro-Cement Mortar	62
Ferro-Cement as a Composite Material	63
Reinforcement Configuration Specification	69
Definition of Ferro-Cement	69
Conclusions	70

Ferro-Cement—The Design of its Properties for Marine Usage

H M Moar

Designing for Manufacture	71
Designing for Strength	72

Designing for Durability	74	Construction Cost	110
Future Developments	74	Trials	110
Conclusions	74	Classification	110
		Maintenance and Repair	110
		Conclusion	111
Discussion on the Material Properties of Ferro-Cement		Ferro-Cement Vessels on the Pacific Coast of North America	
Testing of Ferro-Cement as a Means of Analysing Behaviour	75	<i>P Noble and W Cleaver</i>
