
CONTENTS

	Preface	xi
Chapter 1	Introduction to Geotechnics, Statistics, and SI	
1-1	General Introduction	
1-2	The Study of Soil Mechanics	
1-3	Text Objectives	
1-4	Some Typical Soil Problems	4
1-5	Historical Development of Soil Mechanics	
1-6	Soil Failures	
1-7	Sources of Information for Geotechnical Engineers	13
1-8	Elements of Statistics and Probability	16
1-9	SI Units	23
Chapter 2	Soil Properties—Physical and Index	26
2-1	Introduction	26
2-2	Soil Composition and Terms	26
2-3	Basic Definitions and Mass-Volume Relationships	27
2-4	Noncohesive and Cohesive Soils	39
2-5	Atterberg (or Consistency) Limits	40
2-6	Soil Moisture	41
2-7	Indices of Soil Consistency	42
2-8	Specific Surface	43
2-9	Specific Gravity	44
2-10	Soil Texture	46
2-11	Soil Phases	46
2-12	Grain Size	48
2-13	Unit Weight of Soils (Dry, Wet, and Submerged)	50
2-14	Effective or Intergranular Pressures	52
2-15	Intergranular Pressures in Partially Saturated Soils	59
2-16	Summary	60

Chapter 3	Geologic Properties, Formations of Natural Soil Deposits, and Groundwater	64
3-1	Introduction	64
3-2	The Earth	65
3-3	Physical Properties of Minerals	66
3-4	The Rock and Soil Cycle	67
3-5	Igneous Rocks	70
3-6	Sedimentary Rocks	74
3-7	Metamorphic Rocks	79
3-8	Crustal Movements	80
3-9	Rock Weathering and Soil Formation	85
3-10	General Considerations in Rock Weathering	92
3-11	Soil Formations Produced by Weathering	92
3-12	Running Water and Alluvial Deposits	96
3-13	Glacial Deposits	100
3-14	Wind Deposits	106
3-15	Gravity Deposits	109
3-16	Subsurface Water	109
3-17	Sources of Geologic Information	116
3-18	Summary	117
Chapter 4	Soil Classification Tests and Common Systems	119
4-1	General	119
4-2	Soil Tests for Classification	121
4-3	The Unified Soil Classification System	128
4-4	The AASHTO Soil Classification System	135
4-5	General Description of AASHTO Soil Classification Subgroups	137
4-6	The AASHTO Group Index	138
4-7	Field Identification Tests	140
4-8	Summary	141
Chapter 5	Soil Structure and Clay Minerals	145
5-1	Soils and Soil Formation	145
5-2	Soil Structure and Fabric	146
5-3	Soil Cohesion and Friction	146
5-4	Granular Soil Structure	147
5-5	Other Considerations of Granular Soil Structure; Relative Density	149
5-6	Structure of Cohesive Soils	154
5-7	Clay and Clay Minerals	158
5-8	General Clay Mineral Properties	163
5-9	Summary	167
Chapter 6	Soil Exploration and Sampling	170
6-1	Introduction	170
6-2	Site Investigation	171
6-3	Site Geology	172

6-4	Determining Subsurface Conditions	174
6-5	Location, Spacing, and Depth of Borings	177
6-6	Sampling	179
6-7	Water Table	184
6-8	Sample Quality and Engineering Practice	184
6-9	The Standard Penetration Test (SPT)	185
6-10	SPT Correlations	186
6-11	Boring Logs	188
6-12	Cone Penetration Test (CPT)	189
6-13	Rock Drilling	192
6-14	Seismic Exploration	194
6-15	Resistivity Exploration	199
6-16	The Total Stress Cell and Dilatometer	200
6-17	Summary	202
Chapter 7	Compaction and Soil Stabilization	204
7-1	General Concept of Soil Stabilization	204
7-2	Soil as a Construction Material	205
7-3	Soil Stabilization	205
7-4	Soil Compaction	207
7-5	Theory of Compaction	208
7-6	Compaction of Cohesionless Soils	212
7-7	Structure and Properties of Compacted Cohesive Soils	213
7-8	Stabilization of Expansive Clays	215
7-9	Other Comments on Soil Compaction	216
7-10	Excavation and Compaction Equipment	217
7-11	Compaction Specifications	223
7-12	Field Control of Compaction	225
7-13	Statistical Field Unit Weight Control	230
7-14	Deep Compaction of In Situ Soils	232
7-15	Static Stabilization	234
7-16	Fabric Stabilization	234
7-17	Soil-Cement and Lime-Fly-Ash Soil Stabilization	236
7-18	Special Problems in Soil Compaction	238
7-19	Summary	239
Chapter 8	Soil Hydraulics, Permeability, Capillarity, and Shrinkage	241
8-1	Water in Soil	241
8-2	Permeability	242
8-3	Soil Water Flow and the Bernoulli Energy Equation	245
8-4	Determination of the Coefficient of Permeability	249
8-5	Limitations and Other Considerations in Determining k	252
8-6	Effective Coefficient of Permeability of Stratified Soils	254
8-7	Capillarity and Capillary Effects in Soil	257
8-8	Seepage Forces and Quick Conditions	267
8-9	Summary	274

Chapter 9	Seepage and Flow Net Theory	277
9-1	Introduction	277
9-2	Seepage Flow through Soil—The LaPlace Equation	278
9-3	Flow Nets	280
9-4	Flow Nets for Sheet-Pile Cut-Off Walls	282
9-5	Flow Nets for Earth Dams	286
9-6	Methods for Obtaining the Phreatic Line for Earth Dams	289
9-7	Flow Net Construction	292
9-8	Direct Computation of Seepage Quantity	297
9-9	The Flow Net When $k_x \neq k_y$	299
9-10	Control of Seepage through Dams	301
9-11	Sudden Drawdown and Seepage Forces	302
9-12	Piping and Control of Piping	304
9-13	Other Methods for Seepage Quantities	305
9-14	Elements of Well Hydraulics	307
9-15	Summary	
Chapter 10	Stresses, Strains, and Rheological Concepts	310
10-1	General Considerations	310
10-2	General Stresses and Strains at a Point	312
10-3	Theory of Elasticity Concepts Used in Soil Mechanics Problems	313
10-4	Octahedral Stresses	314
10-5	Stress-Strain Modulus and Hooke's Law	320
10-6	Anisotropic Soil	325
10-7	Two-Dimensional Stresses at a Point	326
10-8	Mohr's Stress Circle	328
10-9	Mohr's Circle for Inclined Principal Axes	332
10-10	Boussinesq Stresses in an Elastic Half Space	333
10-11	Boussinesq Solution for Round Plates	335
10-12	Numerical Integration of the Boussinesq Equations	336
10-13	Other Solutions for the Boussinesq Equations	337
10-14	Pressure Bulbs and Stress Concentration Factors	341
10-15	The Vertical Pressure Profile	342
10-16	The Average Pressure	344
10-17	The Newmark Influence Chart	345
10-18	Westergaard's Stress	348
10-19	Soil Deformation or Settlement	349
10-20	Rheological Models	351
10-21	Summary	353
Chapter 11	Consolidation and Consolidation Settlements	356
	Soil Consolidation and Settlement Problems	356
1-2	Soil Consolidation	358
1-3	Interpreting the Consolidation Test	360
1-4	Correction of the Compression Curve for Disturbance	365

11-5	Preconsolidation and Estimation of the Preconsolidation Pressure	365
11-6	The Compression Parameters	367
11-7	Compression Parameters for Arithmetic Plots	369
11-8	Empirical Approximations for C_c and C'_c	370
11-9	Soil Structure and Consolidation	372
11-10	Settlement Computations	373
11-11	Secondary Compression (Creep) Settlements	374
11-12	Illustrative Examples	376
11-13	Controlling Consolidation Settlements	382
11-14	Reliability of Consolidation Settlement Computations	382
11-15	Summary	383
Chapter 12	Rate of Consolidation	387
12-1	The Coefficient of Consolidation	387
12-2	Percent Consolidation	391
12-3	Methods of Obtaining the Time of Interest for Computing c_v	393
12-4	Rate of Consolidation Based on Strain	396
12-5	Illustrative Examples	402
12-6	Consolidation Rates for Layered Media	410
12-7	Three-Dimensional Consolidation	411
12-8	Summary	411
Chapter 13	Shear Strength of Soils	414
13-1	Introduction	414
13-2	Shear Strength Parameters c and ϕ	416
13-3	Soil Failure, Critical Void Ratio, and Residual Strength	418
13-4	Soil Tests to Determine Shear Strength Parameters	420
13-5	Stress Paths	435
13-6	Shear Strength of Cohesionless Soil	440
13-7	Shear Strength of Cohesive Soils	442
13-8	Pore Pressure Effects in Consolidated-Drained Tests	455
13-9	Sensitivity of Cohesive Soils	455
13-10	Empirical Methods for Shear Strength	456
13-11	In-Situ Direct Measurement of Shear Strength	459
13-12	Factors Affecting Shear Strength	462
13-13	Normalized Soil Parameters	463
13-14	The s_u/p_o Ratio	464
13-15	Pore Pressure Parameters	466
13-16	Summary	471
Chapter 14	Static and Dynamic Stress-Strain Characteristics	476
14-1	Stress-Strain Data	476
14-2	The Stress-Strain Modulus	476
14-3	Poisson's Ratio	479

4-4	Factors Affecting the Stress-Strain Modulus and Approximations	482
14-5	Resilient Modulus	482
14-6	Dynamic Soil Stress-Strain Modulus	483
14-7	Cyclic Modulus of Deformation and Liquefaction	486
14-8	Summary	496
Chapter 15	Lateral Pressures, Bearing Capacity, and Settlement	498
15-1	Introduction	498
15-2	Soil Stresses at a Point- K_0 Conditions	
15-3	Active and Passive Earth Pressures	
15-4	Pressures against Walls	
15-5	Inclined Cohesionless Ground	507
15-6	Lateral Earth Pressure for Cohesive Soils	510
15-7	The Trial Wedge Solution	513
15-8	Logarithmic Spiral and ϕ -Circle Methods for Passive Pressure in Cohesionless Soil	514
15-9	Bearing Capacity—Theoretical	
15-10	Bearing Capacity by Empirical Methods	522
15-11	Other Bearing Capacity Problems	524
15-12	Deep Foundations	525
15-13	Immediate Settlement Computations	529
15-14	Summary	533
Chapter 16	Stability of Slopes	536
16-1	General Considerations in Stability of Slopes	536
16-2	Infinite Slopes	537
16-3	Stability of Infinite Cohesive Slopes	539
16-4	Circular Arc Analysis	540
16-5	The ϕ -Circle Method	542
16-6	Slope Stability Charts	544
16-7	Slope Analysis by Method of Slices	551
16-8	Wedge Block Analysis	555
16-9	Validity of Slope Stability Analyses	558
16-10	Summary	559
	Bibliography	563
	Indexes	571
	Name Index	
	Subject Index
