

CONTENTS

Preface	vii
Introduction	1
1. BOLT ELEMENTS	3
Bolt steel	4
Bearing plates	6
Rock straps - wire mesh-roof ties	13
2. BOLT GROUP I - IMMEDIATE SUPPORT (WORKING SUPPORT)	15
IA - Split and wedge	15
IB - Polyester resin anchors	16
IC - Expansion shells	20
3. BOLT GROUP II - PERMANENT SUPPORT	25
IIA - The Perfo method	27
IIB - Bergjet method	28
IIC - Injekto method	31
IID - Polyester grouting	33
4. BOLT GROUP III - COMBINED IMMEDIATE AND PERMANENT SUPPORT	33
IIIA - Expansion bolts in stainless/hot galvanized steel with none corrosion shells	34
IIIB - Rebar and round bolts with paddles in stainless steel or hot galva- nized installed in resin or mortar	34
IIIC - Hollow expansion bolts	34
IIID - Normal deformed rebar bolt with resin anchorage	35
5. BOLT GROUP IV - SHUTTERING BOLTS	37
IVA - Shuttering tie with expansion shell	38
IVB - Shuttering tie with resin anchor	39

6. BOLT GROUP V - YIELDING BOLTS	40
VA - Split set (developed by Ingersoll-Rand Company and Dr. James J. Scott, inventor)	41
VB - GD - yield anchor	42
7. PRETENSIONING OF BOLTS	43
Tensioning with adjustable spanner	44
Tensioning by torque wrench	45
Tensioning by compressed air wrench	45
Tensioning with hydraulic tensioners	47
8. DETERMINATION OF BOLT LENGTHS AND BOLT PATTERNS	50
Limited loose blocks	50
Systematic bolting not tensioned	51
Systematic bolting - pretensioned	52
Support of walls and cuttings	56
Bolting patterns	58
9. PRINCIPLES	62
A. Foliated and bedded rock	66
B. Blocky rock	68
C. Broken rock	69
D. Clay filled fractures and crushing zones	71
E. Rock stress problems	73
10. SPECIAL BOLT SYSTEMS	80
Truss bolting	80
Glass fibre bolting	80
Fore-poling	82
Plastic expansion shells	82
Resin-grouted rockbolts of fibre-glass	83
