

# CONTENTS

INTRODUCTION .....	1
Types of Structures. Structural Members. Framed Structures. Classification of Loads. Line Diagrams. Slide-Rule Computations. Checks on Problems.	
2. REACTIONS .....	10
Equilibrium. Moving Bodies. Calculation of Unknowns. Types of Support. Statically Determinate Structures. Geometric Instability. Sign Convention. Horizontal and Vertical Components. Free-Body Diagrams. Reactions by Proportions. Reactions Calculated by Equations of Statics. Problems.	
3. REACTIONS FOR CANTILEVER AND ARCH-TYPE CONSTRUCTION .....	22
The Simple Cantilever. Cantilever Structures. Reaction Calculations for Cantilever Structures. Three-Hinged Arches. Uses of Arches and Cantilever Structures. Problems.	
4. SHEAR AND MOMENT DIAGRAMS .....	32
Introduction. Shear Diagrams. Moment Diagrams. Relationships of Loads, Shears, and Bending Moments. Moment Diagrams Drawn from Shear Diagrams. Problems.	
5. INTRODUCTION TO TRUSSES .....	43
General. Assumptions for Truss Analysis. Effect of Assumptions. Truss Notation. Common Types of Roof Trusses. Common Types of Bridge Trusses.	
6. TRUSS ANALYSIS BY METHOD OF JOINTS .....	49
Use of Sections. Horizontal and Vertical Components. Arrow Convention. Method of Joints. Problems.	
7. TRUSS ANALYSIS BY MOMENTS AND SHEARS .....	56
Method of Moments. Stresses in Members Cut by Sections. Application of the Method of Moments. Method of Shears. Problems.	
8. TRUSS TYPES AND STABILITY .....	66
Arrangement of Truss Members. Statical Determinancy of Trusses. Simple Trusses. Compound Trusses. Complex Trusses. Stability. Equations of Condition. Problems.	
9. SUBDIVIDED TRUSSES .....	78
Reasons for Subdivision. Trusses with Multiple-Web Systems. Subdivided Trusses. Disadvantages of Subdivision. Analysis of Baltimore Truss; "Secondary-Truss" Method. Analysis of Baltimore TRUSS AS A SINGLE TRUSS Analysis of K TRUSS Problems	

## CONTENTS

10. GRAPHIC STATICS .....	89
General. Basic Concepts. Bow's Notation. The Force Polygon. Force Polygons for Individual Joints of a Truss. The Maxwell Diagram. Sample Problems. Substitute Members. Graphical Determination of Reactions; Non-parallel Loads. Graphical Determination of Resultant of Series of Parallel Loads. Graphical Determination of Reactions; Parallel Loads. Reactions for a Three-Hinged Arch. Problems.	
11. INFLUENCE LINES FOR BEAMS .....	111
Introduction. The Influence Line Defined. Influence Lines for Simple Beam Reactions. Influence Lines for Simple Beam Shears. Influence Lines for Simple Beam Moments. Uses of Influence Lines; Concentrated Loads. Uses of Influence Lines; Uniform Loads. Common Simple Beam Formulas from Influence Lines. Influence Lines for Beams with Floor Joists. Problems.	
12. INFLUENCE LINES FOR TRUSSES .....	121
General. Arrangement of Bridge Floor Systems. Influence Lines for Truss Reactions. Influence Lines for Member Stresses of Parallel-Chord Trusses. Influence Lines for Members of Nonparallel-Chord Trusses. Influence Lines for K Truss. Determination of Maximum Stresses. Counters in Bridge Trusses. Problems.	
13. MOVING LOADS .....	136
General. Live Loads for Highway Bridges. Live Loads for Railway Bridges. Impact Loadings. Maximum Shear in a Beam Supporting Uniform Live Loads. Maximum Bending Moments at Points in Beams Supporting Uniform Live Loads. Maximum End Shear in a Beam Supporting Moving Concentrated Load. Maximum Shear at Interior Points of Beams Supporting Moving Concentrated Loads. Maximum Moment at a Point in a Beam Supporting Concentrated Live Loads. Absolute Maximum Moment Developed by a Series of Concentrated Live Loads. Discussion of Methods. Problems.	
14. SPACE FRAMES .....	155
General. Basic Principles. Statics Equations. Special Theorems Applying to Space Frames. Types of Support. Illustrative Examples. More Complicated Frames. Problems.	
15. DISCUSSION OF INDETERMINATE STRUCTURES .....	170
Introduction. Continuous Structures. Advantages of Indeterminate Structures. Disadvantages of Indeterminate Structures. The Wichert Truss. Problems.	
16. APPROXIMATE ANALYSIS OF INDETERMINATE STRUCTURES .....	
General. Trusses with Two Diagonals in Each Panel. Analysis of Mill Buildings. Lateral Bracing for Bridges. Analysis of Building Frames for Vertical Loads. Analysis of Building Frames for Horizontal Loads. Problems.	

## CONTENTS

17. DEFLECTIONS .....	195
Reasons for Computing Deflections. The Moment-Area Theorems. Application of the Moment-Area Theorems. Method of Elastic Weights. Application of the Method of Elastic Weights. Limitations of Elastic-Weight Method. Conjugate-Beam Method. Summary of Beam Relations. Application of Conjugate Method to Beams. Application of Conjugate Method to Frames. Problems.	
18. DEFLECTIONS, CONTINUED .....	223
Virtual Work. Truss Deflections by Virtual Work. Application of Virtual Work to Trusses. Deflections of Beams and Frames by Virtual Work. Application of Virtual Work to Beams and Frames. Rotations or Slopes by Virtual Work. Maxwell's Law of Reciprocal Deflections. Truss Deflections Graphically. The Williot Diagram. The Williot-Mohr Diagram. Problems.	
19. DEFLECTION METHODS OF ANALYZING INDETERMINATE BEAMS .....	251
Introduction. Beams with One Redundant. Beams with Two or More Redundants. Support Settlement. Influence Lines for Indeterminate Beams. Qualitative Influence Lines. Problems.	
20. DEFLECTION METHODS OF ANALYZING INDETERMINATE TRUSSES ....	275
Analysis of Externally Redundant Trusses. Analysis of Internally Redundant Trusses. Analysis of Trusses Redundant Internally and Externally. Influence Lines for Statically Indeterminate Trusses. Problems.	
21. LEAST WORK AND THE THREE-MOMENT THEOREM .....	293
Method of Least Work. Application of Least Work. The Three-Moment Theorem. Development of the Theorem. Application of the Three-Moment Theorem. Effect of Support Settlements by the Three-Moment Theorem. Problems.	
22. SLOPE, DEFLECTION .....	310
Introduction. Derivation of Slope-Deflection Equations. Application of Slope-Deflection Equations to Continuous Beams. Analysis of Frames — No Sidesway. Analysis of Frames with Sidesway. Analysis of Frames with Sloping Members. Problems.	
23. MOMENT DISTRIBUTION .....	329
General. Introduction. Definitions. Sign Convention. Basic Relations. Application of Moment Distribution. Modification of Stiffness for Simple Beams. Shear and Moment Diagrams. Structures with Columns, Sidesway Prevented. Structures Having Sidesway; Columns of Equal $l$ 's and Lengths. Structures Having Sidesway; Columns of Different $l$ 's and Lengths: Multistory Frames. Problems.	
24. COLUMN ANALOGY .....	358
General. Development of the Method. Computation of Fixed-End Moments. Computation of Carry-Over and Stiffness Factors. Analysis of Frames. Conclusion. Problems.
