### PART I BASIC RELATIONS IN THE THEORY OF SHELLS

#### CHAPTER 1. BRIEF OUTLINE OF THE THEORY OF SURFACES . . . . . 1

1. Curvilinear Coordinates on a Surface and the First Quadratic Form . . . . .	1
2. Basic and Auxiliary Trihedra of a Surface. Decomposition of an Arbitrary Vector Along Axes of Basic and Auxiliary Trihedra . . . . .	4
3. Gauss-Weingarten Derivative Formulas. Codazzi-Gauss Equations . . . . .	8
4. Resolution of Derivatives of an Arbitrary Vector along the Axes of the Basic and Auxiliary Trihedra . . . . .	11
5. Second Quadratic Form of a Surface and Dupin's Indicatrix . . . . .	12
6. Conjugate Lines, Lines of Curvature, Asymptotic Lines . . . . .	15
7. Gaussian Curvature and Bending of Surfaces . . . . .	17
8. Fundamental Formulas of the Theory of Surfaces in Orthogonal Coordinates . . . . .	18

#### CHAPTER 2. STATIC AND GEOMETRIC RELATIONS OF THE THEORY OF SHELLS . . . . . 22

9. Forces and Moments . . . . .	22
10. Forces and Moments along Oblique Sections . . . . .	25
11. External Loads . . . . .	27
12. Equilibrium Equations of the Shell . . . . .	28
13. Stress Functions . . . . .	33
14. Vectors of Elastic Displacement and of Elastic Rotation of the Middle Surface . . . . .	36
15. Components of Tangential Deformation (Strain) of the Middle Surface of the Shell . . . . .	41
16. Expansions for the Derivatives of the Vector of Elastic Displacement . . . . .	43

## CONTENTS

	Page
Chapter 2 (contd.)	
17. Components of Bending Deformation (Strain) of the Middle Surface . . . . .	45
18. Expressions for Derivatives of the Vector of Elastic Rotation . . . . .	51
19. Expressions for Components of Deformation and Angles of Rotation in Terms of Displacements . . . . .	52
20. Determination of Displacements on the Basis of Given Components of Deformation. Equations of Compatibility of Strain . . . . .	55
21. Transformation of Components of Strain . . . . .	59
<b><u>CHAPTER 3. RELATIONS OF ELASTICITY. GENERAL THEOREMS OF THE THEORY OF SHELLS . . . . .</u></b>	
22. Fundamental Hypothesis of the Theory of Shells	64
23. Relations of Elasticity . . . . .	67
24. Supplementary Equations of the Theory of Shells	74
25. Work of Forces and Moments of Thin Shells . . . . .	75
26. Strain Energy . . . . .	78
27. Analysis of Some Variants of Elasticity Relations . . . . .	82
<b><u>CHAPTER 4. FUNDAMENTAL EQUATIONS OF THE THEORY OF SHELLS . . . . .</u></b>	
28. Summary of Fundamental Relations of the Theory of Shells . . . . .	86
29. Complete System of Equations of the Theory of Shells . . . . .	89
30. Static-Geometric Analogy . . . . .	92
31. Equations of Compatibility in Terms of Forces and Moments . . . . .	96
32. Equations of Equilibrium in Terms of Displacements . . . . .	102
33. Boundary Conditions . . . . .	104
<b><u>PART II MEMBRANE THEORY</u></b>	
<b><u>CHAPTER 5. MEMBRANE THEORY OF SHELLS OF ARBITRARY SHAPE . . . . .</u></b>	
1. General Assumptions of Membrane Theory . . . . .	110
2. Static, Geometric and Mixed Problems of Membrane Theory . . . . .	112
3. Boundary Conditions in Membrane Theory . . . . .	116
4. Three Classes of Membrane Shells . . . . .	117
5. Relations between Membrane Theory and the Theory of Infinitesimal Flexures of Surfaces . . . . .	119
6. Conjugate Geometric and Static Problems of Membrane Theory . . . . .	122
7. Membrane Shell of Positive Curvature with One Geometric Condition . . . . .	127

## CONTENTS

	Page
<u>CHAPTER 6.</u> MEMBRANE THEORY OF SHELLS OF ZERO CURVATURE . . . . .	131
8. Curvilinear Coordinates on Cylindrical and Conical Surfaces . . . . .	131
9. General Integral of Equations of Membrane Theory of Shells of Zero Curvature . . . . .	135
10. Boundary Conditions . . . . .	139
11. Examination of the State of Stress of a Cylindrical Membrane Shell . . . . .	141
12. Examples of Analysis of Cylindrical Membrane Shells . . . . .	144
13. Examples of Analysis of Cylindrical Membrane Shells, Continued . . . . .	
 <u>CHAPTER 7.</u> MEMBRANE THEORY OF SPHERICAL SHELLS . . . . .	
14. Transformation of Membrane Equations of a Spherical Shell . . . . .	
15. Integration Methods for the Equations of Membrane Theory of Spherical Shells . . . . .	
16. Application of the Methods of the Theory of Functions of a Complex Variable to the Analysis of Spherical Membrane Shells . . . . .	167
17. Integral Equations of Equilibrium . . . . .	170
18. Static Meaning of Poles of the Complex Stress Function . . . . .	173
 <u>CHAPTER 8.</u> ANALYSIS OF CLOSED SPHERICAL MEMBRANE SHELLS . . . . .	
19. Analysis of Closed Spherical Membrane Shells under the Action of Concentrated Forces and Moments . . . . .	180
20. Example . . . . .	182
21. Displacements of a Closed Spherical Shell Subjected to Concentrated Forces and Moments . . . . .	
22. Analysis of Closed Spherical Membrane Shells Subjected to Distributed Loads . . . . .	190
23. Generalizations . . . . .	197
 <u>CHAPTER 9.</u> ANALYSIS OF MEMBRANE SHELLS TAKING BOUNDARY CONDITIONS INTO ACCOUNT . . . . .	
24. The Simplest Problems in Which Account Must be Taken of Boundary Conditions . . . . .	205
25. Examples . . . . .	212
26. Number of Solutions of Static and Geometric Problems for Membrane Shells of Positive Curvature . . . . .	219
27. Examples of Statically Determinate and Geometrically Variable Membrane Shells . . . . .	224
<u>PART III    CIRCULAR CYLINDRICAL SHELLS</u>	
 <u>CHAPTER 10.</u> METHOD OF EXPANSION IN TRIGONOMETRIC SERIES . . . . .	228

## CONTENTS

### Chapter 10 (contd.)

1.	Basic Equations of the Theory of Cylindrical Shells . . . . .	228
2.	The Solving Equation of Circular Cylindrical Shells . . . . .	232
3.	Application of Trigonometric Series to the Analysis of Circular Cylindrical Shells . . . . .	

### CHAPTER 11. ANALYSIS OF CLOSED CYLINDRICAL SHELLS . . . . .

4.	Basic Formulas for Analysis . . . . .	244
5.	Properties of Roots of the Characteristic Equation. Simplification of the Characteristic Equation . . . . .	
6.	Physical Meaning of Zero Roots of the Characteristic Equation . . . . .	
7.	Analysis of the State of Stress of Closed Cylindrical Shells . . . . .	
8.	Approximate Methods of Analysis of the Basic State of Stress of Circular Cylindrical Shells . . . . .	267
9.	Approximate Methods of Analysis of Edge Effects . . . . .	273
10.	States of Stress Corresponding to Large Values of $m$ . . . . .	276
11.	Imposition of Boundary Conditions . . . . .	281

### CHAPTER 12. ANALYSIS OF OPEN CYLINDRICAL SHELLS . . . . .

12.	Basic Formulas for Analysis . . . . .	291
13.	Properties of Roots of Characteristic Equation . . . . .	296
14.	Analysis of the State of Stress in Open Cylindrical Shells . . . . .	300
15.	Approximate Methods of Analysis of Open Cylindrical Shells . . . . .	304
16.	Imposition of Boundary Conditions . . . . .	310

## PART IV ANALYSIS OF THE STATE OF STRESS IN AN ARBITRARY SHELL

### CHAPTER 13. ASYMPTOTIC INTEGRATIONS OF PARTIAL DIFFERENTIAL EQUATIONS . . . . . 314

1.	Classification of Linear Differential Operators with Partial Derivatives . . . . .	314
2.	Nomenclature and Notations . . . . .	319
3.	Asymptotic Expansion of Integrals of a Homogeneous Differential Equation . . . . .	323
4.	Three Fundamental Cases . . . . .	326
5.	Construction of Functions of Variation . . . . .	330
6.	Integrals with Given Non-Characteristic Supporting Contour . . . . .	333
7.	Case of Multiple Characteristics . . . . .	336
8.	Integrals with Given Characteristic Supporting Contour . . . . .	344
9.	Asymptotic Expansion of Particular Solution of a Nonhomogeneous Partial Differential Equation . . . . .	350
10.	Example . . . . .	358

## CONTENTS

	Page
<u>CHAPTER 14.</u> ASYMPTOTIC INTEGRATION OF EQUATIONS OF THE THEORY OF SHELLS . . . . .	366
11. Asymptotic Integration of a System of Equations . . . . .	366
12. Non-Contradictory values of Indices of Intensity . . . . .	373
13. Construction of Functions of Variation . . . . .	376
14. Determination of Coefficients of Asymptotic Expansion of Functions of Intensity for Fundamental Integrals . . . . .	
15. Construction of Approximate Equations of the Theory of Shells . . . . .	382
16. Asymptotic Error of Equations of Membrane Theory . . . . .	385
17. Elementary States of Stress in an Arbitrary Shell . . . . .	389
18. The Complete State of Stress in an Arbitrary Shell . . . . .	392
 <u>CHAPTER 15.</u> ELEMENTARY STATES OF STRESS . . . . .	 
19. Fundamental State of Stress. Membrane and Pure Bending States of Stress . . . . .	396
20. Approximate Equations for States of Stress with Large Indices of Variation . . . . .	401
21. Region of Applicability of Equation (20.11) . . . . .	406
22. Simple Edge Effect . . . . .	413
23. Integration of the Solving Equation of Simple Edge Effect . . . . .	
24. Solving Equations of Non-degenerate Generalized Edge Effects . . . . .	423
25. Solving Equations of Generalized Edge Effect in a Shell of Zero Curvature . . . . .	428
26. Range of Applicability of Solving Equations (25.5) . . . . .	432
27. Further Simplification of Solving Equations (25.5) . . . . .	435
28. Range of Applicability of Membrane Theory in the Analysis of Shells of Zero Curvature . . . . .	
29. Estimating the Accuracy of Construction of a Complete State of Stress . . . . .	448
 <u>PART V APPROXIMATE METHODS OF ANALYSIS OF SHELLS</u>	 
<u>CHAPTER 16.</u> APPLICATION OF EXPANSIONS IN ORTHOGONAL FUNCTIONS TO THE ANALYSIS OF SHELLS . . . . .	453
1. Expansion of Functions in Fourier Series . . . . .	453
2. Methods of Construction of Closed Orthogonal Systems of Functions . . . . .	455
3. Continuation . . . . .	458
4. Index of Variation of the State of Stress and of External Loading . . . . .	463
 <u>CHAPTER 17.</u> GENERAL APPROXIMATE METHODS . . . . .	 471
5. Membrane Theory . . . . .	471
6. Region of Applicability of Membrane Theory . . . . .	474
7. Properties of the Simple Edge Effect . . . . .	484

## CONTENTS

### Chapter 17 (contd.)

8.	Approximate Theory of the Simple Edge Effect . . . . .	494
9.	Analysis of Shells by the Membrane Theory with Consideration of Edge Effects . . . . .	495
10.	Particular Cases . . . . .	502
11.	Example . . . . .	508
12.	Approximate Methods of Analysis of Shells with Large Indices of Variation . . . . .	515
13.	Example . . . . .	522
14.	Shells with Non-rigidly Supported Edges . . . . .	522

### CHAPTER 18.   CYLINDRICAL AND CONICAL SHELLS . . . . .

15.	The Generalized Edge Effect in a Shell of Zero Curvature . . . . .	527
16.	The Solving Equations of the Generalized Edge Effect in Shells of Zero Curvature . . . . .	530
17.	Integration of the Solving Equations of the General- ized Edge Effect for Cylindrical Shells . . . . .	534
18.	Imposition of Boundary Conditions . . . . .	537
19.	Integration of Equations of the Generalized Edge Effect for Conical Shells . . . . .	542
20.	Analysis of the State of Stress of Shells of Zero Curvature . . . . .	548
21.	Approximate Theory of the Non-degenerate Edge Effect . . . . .	554
22.	Integration of Equations of the Non-degenerate Edge Effect for Cylindrical and Conical Shells . . . . .	557
23.	Integration of System (22.9) . . . . .	564
24.	Continuation . . . . .	570
25.	Tables of Elastic Reactions and of Elastic Displace- ments of Cylindrical Shells of Medium Reduced Length . . . . .	575
26.	Example . . . . .	584
27.	Analysis of Cylindrical Shells of Medium Reduced Length Subjected to Loads Distributed Along A Generator . . . . .	589
28.	Example . . . . .	594
29.	Analysis of Conical Shells . . . . .	603
