

# CONTENTS

## CHAPTER

### STRESS AND STRAIN

Stress—Strain—Elastic limits—Elastic constant—R  
stress—Ellipse of stress—Circular diagram stress  
planes and stresses—Principal strains.

## PART

### WORKING STRESSES

Elasticity—Ductile strains—Ultimate and elastic strength—Factor  
of safety—Mechanical properties—Effects of temperature—Elastic  
strain energy—Live loads—Impact stresses—Working loads and  
stresses—Tables of properties . . . . . 33-40

## PART II

### STATICS

Graphical statics—Bow's Notation—Conditions of equilibrium—  
Funicular or link polygon—Moments from funicular polygon—  
Moments, centroids, and second moments or moments of inertia  
of plane areas—Moment of inertia or ellipse of inertia . . . . . 50-64

## CHAPTER

### BENDING MOMENTS AND SHEARING FORCES

Straining actions—Shearing forces and bending moments—Dia-  
grams—Actual and effective span—Use of funicular polygon—  
Relation between bending moment and shearing force . . . . . 65-95

## CHAPTER V

## STRESSES IN BEAMS

	PAGE
Theory of bending—Simple and other bending—Moment of Resistance—Modulus of section—Steel sections—Cast-iron girders—Unsymmetrical bending—Distribution of shear stress—Principal stresses—Flitched beam—Reinforced concrete beams—Strength graphs—Bond stress—Shear reinforcement . . . . .	86-137

## CHAPTER VI

## MOVING LOADS

Maximum shearing forces and bending moment—Various cases—Maximum pressure on supports—Equivalent uniformly distributed load—Conventional loads—Influence lines for solid beams and for trusses . . . . .	38-169
--	--------

## CHAPTER VII

## DEFLECTION OF BEAMS

Relations of curvature, slope, and deflection—Various cases—Propped beams—Deflection and slope from bending-moment diagrams—Other graphical methods—Beams of varying cross-section . . . . .	170-210
--	---------

## CHAPTER VIII

## CONSTRAINED BEAMS

Built-in beams—Effect of end fixture—Symmetrical and unsymmetrical loading—Continuous beams—Theorem of three moments—Wilson's method—Moment distribution method . . . . .	211-255
---	---------

## CHAPTER IX

## FLEXURAL STRAIN ENERGY

Clerk Maxwell's reciprocal deflection theorem—Castigliano's first theorem—Minimum strain energy—Beam deflection due to shearing . . . . .	256-273
---	---------

## CONTENTS

### CHAPTER X

#### DIRECT AND BENDING STRESSES

	PAGE
Combined bending and direct stress—Eccentric loads—S-Polygon—Pillars, columns, stanchions, struts—Euler's theory—Rankine's and other formulae—Built-up stanchions and struts—Proportions of lattice bars—Eccentric loads on long columns—Perry-Robertson formula—Struts and tie rods with lateral loads—Reinforced concrete under bending and thrust . . . . .	274-337

### CHAPTER XI

#### FRAMED STRUCTURES

Frames, perfect and imperfect—Roofs and roof trusses, chief types—Braced girders, chief types—Dead loads on roofs—Wind loads—Dead loads on bridges—Moving loads—Incidence and distribution of loads on framed structures . . . . .	333-347
--	---------

### CHAPTER XII

#### STRESSES IN FRAMES

Stress diagrams and examples—Simple roof design—Method of super-position—Method of resolution—Method of sections—Stresses from coefficients—Some special framed girder . . . . .	348-374
--	---------

### CHAPTER XIII

#### MOVING LOAD STRESSES IN FRAMES

Stresses due to rolling loads—Chord stresses—Web stresses—Conventional and exact methods for parallel and for curved chord types—Stresses in counter-braces—Stress in wind bracing . . . . .	375-388
--	---------

### CHAPTER XIV

#### SELECTED TYPICAL FRAMED STRUCTURES

Cantilever bridges types, influence lines, and methods—Two-span swing-bridges—Rim-bearing swing-bridge—Braced piers—Space frames—Tension coefficients for space frames . . . . .	389-413
--	---------

CHAPTER XV

DEFLECTION AND INDETERMINATE FRAMES

	PAGE
Deflection of perfect frames, arithmetical and geometrical methods—Williott-Mohr diagrams—Statically indeterminate structures—Method of deformations—Other methods—Stress due to changes in length—Continuous framed girders . . . . .	4-437

CHAPTER XVI

SOME INDETERMINATE COMBINATIONS

Trussed beams—Simple braced sheds and portals with various types of fixture—Stanchions with cross beams—Effect of distributed side loads—Wind stresses in complex structures—Applications to steel buildings—Vertical loads on rectangular frames—Secondary stresses 438

CHAPTER XVII

FRAME MEMBERS AND STRUCTURAL CONNECTIONS

Determination of section joints—Grouping of riveted joints—Beam and stanchion connections . . . . .	49
---	----

CHAPTER XVIII

PLATE GIRDERS AND BRIDGES

Types and proportions—Curtailement of flange plates—Flange splices—Web stresses and stiffeners—Pitch of rivets—Web splices—Plate girder deck bridge—Plate girder through bridge—Bridge floors and bearings—Skew bridges . . . . . 492-515

CHAPTER XIX

SUSPENSION BRIDGES AND METAL ARCHES

Hanging cable—Simple suspension bridge—Stiffened suspension bridges—Three-hinged stiffening girder—Two-hinged stiffening girder—Temperature stresses in stiffening girders—Stiffened cables—Metal arched rib—Three-hinged spandrel-braced arch—Flexural deformation of curved rib—Arched rib hinged at ends—Temperature stresses in two-hinged rib—Two-hinged spandrel-braced arch—Arched rib fixed at ends—Temperature stresses in fixed rib . . . . . 516-559

CHAPTER XX

EARTH PRESSURE FOUNDATIONS. MASONRY STRUCTURES

PAGE

Earth pressure, Rankine's theory, graphical constructions—Wedge theories—Resistance and stability of masonry, brickwork, etc.—Foundations—Footings—Grillage foundations—Resistance of retaining walls—Masonry dams—Masonry arches—Winkler's criterion—Fuller's device—Elastic method . . . . . 560-590

APPENDIX—

DIMENSIONS AND PROPERTIES OF BRITISH STANDARD SECTIONS 591-599  
 MATHEMATICAL TABLES . . . . . 600-604  
 TABLE OF PROPERTIES OF MATERIALS . . . . . 605

ANSWERS TO EXAMPLES 606-612

INDEX 613-617

PI. A

	PAGE
DETAILS OF ROOFS SHOWN IN FIGS. 182 TO 184A . . . . .	358
N FOR N OR PRA' GIRDER BRIDGE . . . . .	480
III DECK PLATE GIRDER BRIDGE . . . . .	500
IV PLATE GIRDER THROUGH BRIDGE . . . . .	508
