Preface to the Second Edition xi

Preface to the First Edition xvii

1 HISTORICAL PERSPECTIVE ON THIN SHELL CONCRETE STRUCTURES 1

1-1 Design and History, *1*
1-2 Simplified Analyses, *3*
1-3 Cylindrical Shell Walls, *4*
1-4 Domes, *5*
1-5 Barrel-Shell Roofs, *10*
1-6 Introduction of Thin Shells in the United States, *16*
1-7 Folded Plates, *21*
1-8 The Hyperbolic Paraboloid, *22*
Cantilever-Type Hyperbolic Paraboloidal Roofs 25
Gabled Hyperbolic Paraboloidal Roofs 28
1-9 Groined Vaults, *29*
1-10 The Elliptic Paraboloid, *32*
1-11 Shells Designed by Physical Analogies, *34*
1-12 Basis for the Membrane Theory, *36*
1-13 General Method of Analysis, *36*
1-14 Classifications of Shell Systems, *38*
1-15 Design and Analysis, *39*
1-16 Design and Construction, *39*
1-17 Design and Appearance, *40*
***References,** 41*

2 ANALYSIS OF SHELL WALLS 44

2-1 Introduction, *44*

2-2 Stress Resultants from the Membrane Theory for Circular Cylindrical Shells, *44*

Gravity Loads, 48

Internal Pressure, 49

Seismic Loading, 49

Wind Loads, 52

2-3 Stress Resultants from the Membrane Theory for Conical Shells, *55*

Gravity Loads, 57

Internal Pressure, 59

External Wind Pressure, 61

2-4 Stress Resultants from the Membrane Theory for Hyperbolic Shells, *62*

Gravity Loads, 65

Internal Pressure, 68

Seismic Loads, 69

Wind Loads, 69

2-5 Displacements from the Membrane Theory for Circular Cylindrical Shells Loaded Symmetrically with Respect to Their Axes, *70*

2-6 Bending Theory for Circular Cylinders under Axisymmetrical Loading, *72*

2-7 Analysis of a Circular Cylindrical Wall Connected to a Circular Roof Slab, *78*

2-8 Analysis of a Circular Cylindrical Wall Connected to a Foundation, *87*

Free-Sliding (No Restraint), 87

Hinged Restraint, 87

Fixed Restraint, 89

Partially fixed Restraint, 89

2-9 Bending Behavior of Shell Walls under Wind, *92*

Cylinders, 92

Cylinders, Cones, and Hyperboloids, 99

2-10 Thermal Gradients in Shell Walls, *103*

References, *104*

3 ANALYSIS OF DOMES 106

3-1 Definitions, *106*

3-2 Stress Resultants from the Membrane Theory for Domes Loaded Symmetrically with Respect to Their Axes, *108*

Spherical Domes, 110
Conoidal Domes, 115
Elliptical Domes, 116
Conical Domes, 120
3-3 Influence of Dome Geometry on Membrane Theory Stress Resultants, *121*
3-4 Displacements from the Membrane Theory for Domes Loaded Symmetrically with Respect to Their Axes, *123*
3-5 Bending in Shells of Revolution under Loads Symmetrical about Their Axes of Rotation, *126*
3-6 Example of Analysis, *129*
Uniform Gravity Load over the Dome Surface, 130
Temperature Change, 134
Wind Load, 135
3-7 Finite-Element Analysis, *136*
References, *137*

4 ANALYSIS AND DESIGN OF DOMES AND SHELL WALLS **139**

4-1 Introduction, *139*
4-2 Circular Rings, *140*
4-3 Dome-Ring Analysis, *143*
4-4 Ring-Prestressing Analysis, *146*
4-5 Dome-Wall Analysis, *148*
4-6 Dome-Ring-Wall Analysis, *150*
4-7 Design Considerations for Prestressed Concrete Tanks, *153*
4-8 Dome-Ring Problem, *153*
4-9 Dome-Ring-Wall Problem, *159*
4-10 Reinforcement for the Dome-Ring-Wall System, *166*
4-11 Finite-Element Analyses for the Dome Ring Wall, *177*
4-12 Design Factors for a Hyperbolic Cooling Tower Shell, *179*
References, *183*

5 ANALYSIS OF CIRCULAR CYLINDRICAL SHELLS **184**

5-1 Introduction, *184*
5-2 Stress Resultants from the Membrane Theory, *186*
5-3 Displacements from the Membrane Theory, *191*
5-4 Complete Formulation Using the Theory of Shallow Shells, *195*
5-5 Solution of the Shallow-Shell Equations, *201*

5-6 Complete Solution by Other Theories, *203*
5-7 Edge Beams, *205*
5-8 Prestressing within Edge Beams, *209*
5-9 Multiple-Barrel Shells, *210*
5-10 Interaction of Shell and Transverse Ribs, *212*
5-11 Transverse-Frame Analysis, *214*
5-12 Analysis by Finite Elements, *215*
References, *216*

6 DESIGN OF CYLINDRICAL SHELL ROOFS **218**

6-1 Introduction, *218*
6-2 Beam-Arch Approximation, *218*
Beam Analysis, 218
Arch Analysis, 218
6-3 Layout for a Simply Supported Single Barrel, *225*
6-4 Analysis of a Simply Supported Single Barrel by Tables, *228*
6-5 Analysis of a Simply Supported Single Barrel with Edge Beams, *232*
6-6 Analysis of Simply Supported Multiple Barrels, *237*
6-7 Solutions by Numerical Methods, *238*
6-8 Ultimate-Load Behavior of Barrel Shells, *244*
6-9 Reinforcement for a Simply Supported Single-Barrel Shell with Edge Beams, *249*
References, *256*

7 MEMBRANE THEORY FOR TRANSLATION SHELLS OF DOUBLE CURVATURE **258**

7-1 Definitions, *258*
7-2 General Membrane Theory, *259*
7-3 Hyperbolic Paraboloids Bounded by Parabolas, *263*
7-4 Hyperbolic Paraboloids Bounded by Straight Lines, *272*
7-5 Elliptical Paraboloids, *283*
References, *289*

8 BEHAVIOR AND DESIGN OF FOLDED PLATES **291**

8-1 Introduction, *291*
8-2 Definitions and Assumptions, *291*

8-3 Behavior and Design, *296*
8-4 Behavior of a Folded-Plate Roof, *298*
8-5 Comparison of Cylindrical Shells with Folded Plates, *302*
8-6 Prestressing, *304*
8-7 Ultimate-Load Behavior of Folded Plates, *306*
8-8 Folded Plates Continuous over Three Supports, *307*
References, *310*

9 STABILITY AND SAFETY **311**

9-1 General Ideas, *311*
9-2 Buckling Analysis for Thin Shell Walls, *312*
Columns with Lateral Springs, 312
Cylindrical Shells under Axial Load, 314
Cylinders under Uniform Lateral Pressure, 314
Cylinders under Wind Loading, 315
Hyperboloids under Wind, 316
9-3 Buckling Tests on Shell Walls, *318*
9-4 The Buckling of Domes, *320*
9-5 Imperfections and Cracking, *321*
9-6 Cracking and Yielding, *324*
9-7 Creep in Flat Roofs, *325*
References, *328*

10 ROOF DESIGN **330**

10-1 Introductory Ideas, *330*
10-2 Engineering and Applied Science, *331*
10-3 Engineering and Competitive Contracting, *332*
10-4 Engineering and Aesthetics, *332*
10-5 Roof Shells as Structural Art: Scientific Ideas, *334*
10-6 Roof Shells as Structural Art: Construction Ideas, *337*
10-7 Roof Shells as Structural Art: Aesthetic Ideas, *338*
10-8 The Kingdome: Structural Art at Large Scale, *339*
References, *344*

Appendix Tables **346**
Appendix Definitions **362**
Index **365**
