

Contents

Chapter 1	Materials and Specifications	1
Chapter 2	Flexural Analysis of Beams	31
Chapter 3	Design for Flexure	59
Chapter 4	Shear and Torsion	85
	Shear	
	Torsion	
	Examples	
Chapter 5	Development and Splicing of Reinforcement	155
	Development Length	
	Splices	
Chapter 6	Serviceability of Slabs and Beams	199
Chapter 7	Cantilever Retaining Wall Design	229
Chapter 8	Continuous Beams and One-Way Slabs	267
Chapter 9	Limit Design	311
Chapter 10	Two-Way Slabs	327
	Identification, Behavior, and Analysis	
	Flat Slabs and Flat Plates—Basic Direct Design Rules	
	Flat Slabs and Flat Plates—Design Examples	
	Slabs on Beams—Design Examples	
	Equivalent Frame Method	
	Special Conditions	

Chapter 11	Yield-Line Theory for Slabs	
Chapter 12	Strip Method for Slab Design	
Chapter 13	Distribution of Concentrated Loads and Other Special Problems	
Chapter 14	Columns—Axial Load Plus Bending	
	Interaction of Axial Load and Moment in Short Columns	
	Analysis of Given Sections—Short Columns	
	Critical Column Moments and the Influence of Length	
	Column Details and General Considerations	
Chapter 15	Footings	
Chapter 16	Prestressed Concrete Analysis	613
Chapter 17	Composite Beams	641
Chapter 18	Detailing for Seismic Resistance	653
Appendix A	Deflections: Area-Moment Method	665
Appendix B	Frame Analysis: Moment Distribution	675
Appendix C	Summary Treatment of Service Load Analysis and Design for Flexure	
Appendix D	Design Tables and Curves	727
