Tables and graphs for designers

Units. Conversion of British Imperial and U.S.A. into SI units	ix
Mix design	
Graphs plotting percentage passing against sieve aperture size for concrete aggregate	10
Table recommending suitable workabilities for various uses	13
Graphs plotting average ultimate compressive stress against water-to-cement ratio for concretes of various ages	15
Table recommending minimum strength as percentage of average strength for various conditions of control of concreting	20
Tables recommending aggregate-to-cement ratios for various gradings and types of aggregates, water-to-cement ratios, and workabilities	24, 25
Table showing how to determine a certain required grading from available sand and coarse aggregates	27
Weights of materials. Weights of materials in kN/m^3 and kN/m^2	139
Reinforcement	
Table giving cross-sectional areas of numbers of bars and bars in slabs	69
Tables giving CP 110 values of f_y for various types of reinforcement bars	43
Anchorage or bond lengths	
Table giving tension anchorage lengths (l_b/d_b) for various values of f_{cu} and f_y	43
Table giving compression anchorage lengths (l_b/d_b) for various values of f_{cu} and f_y	44
Table giving anchorage length equivalents of hooks and nibs for various diameters of mild and high yield steel bars	46
Table giving compression and tension anchorage lengths for $f_{cu} = 20 \text{ N/mm}^2$ and various values of f_y	47
Table giving overall anchorage lengths using hooks and nibs for $f_y = 250 \text{ N/mm}^2$ and $f = 20 \text{ N/mm}^2$	47

Table giving tension anchorage lengths for bars used in water-retaining structures, CP 2007	56
Curtailment of bars in beams. Table giving points for stopping off or bending up tension reinforcement bars towards supports for simply supported, continuous and fixed beams	48
Elastic theory	
Table giving tension anchorage lengths for bars used in water-retaining structures, CP 2007	56
Tables for calculating equivalent area, x and I	65, 71
Tables giving corresponding values of $K [= M/(bd^2)]$ and z_1 for $f_c = 85 \text{ N/mm}^2$ and $\alpha_e = 15$	70
Shear reinforcement	
Table giving values of V/d for two-arm stirrups for various values of f_{yv} , d_b and s_v	80
Table giving values of V for single bars bent-up at 45° in single shear for various values of f_{yv} and d_b	81
Plastic design of sections for bending moments. Table giving, for balanced design, values of $K_1 [= M_u/(bd^2)]$ and $\rho\% [= 100A_s/(bd)]$ for various values of f_y , f_s and f_{cu}	91
Strength of steel in compression	
Table giving f_{sc} (design ultimate compressive stress) for various values of f_y for compression steel	95
Figure giving CP 110, Fig. 3, stress-strain curve for 25 mm diameter alloy bar	161
Design of beams and slabs. Table to assist in the preliminary design of depths of beams and slabs of various spans	126
Continuous beams and slabs	
Tables giving bending moments and shear forces in continuous beams and slabs carrying dead and imposed loadings	123
Table giving bending moments and shear forces in continuous beams and slabs subjected to unit bending moment at one and both ends	138
Single span beams with fixed and free end supports. Table giving bending moments, support reactions and deflections for beams with various loadings	137
Cylindrical shell roofs	
Graphs for estimating reinforcement in schemes of normal and North-Light shell roofs	178
Elastic analysis using tables for designers	186-188
Conoidal shell roofs. Elastic analysis using tables for designers	188-191
Folded plate roofs	
Tables for designing folded plates of any practical geometry	193-200
Tables for designing certain practical schemes of folded plates	201-207
