## Introduction

*S. R. Hartshorn*

I.	Definitions . . . . .	
	A. Structural Adhesives . . . . .	3
	B. Classification . . . . .	4
	C. Organization of Book . . . . .	5
	D. Units and Conversion Factors . . . . .	5
II.	Background . . . . .	5
	A. Structural Bonding . . . . .	6
	1. Joining Methods . . . . .	6
	2. Advantages of Structural Adhesives . . . . .	9
	3. Limitations of Structural Adhesives . . . . .	10
	B. Principles of Structural Bonding . . . . .	11
	1. Surface and Interfacial Phenomena . . . . .	11
	2. Phase Change . . . . .	11
	3. Bond Failure . . . . .	12
	C. Design of Adhesive Joints . . . . .	12
	D. Testing . . . . .	13
	E. Adhesive Selection . . . . .	14
III.	Markets for Structural Adhesives . . . . .	14
	A. Adhesive Markets . . . . .	14
	B. Markets for Structural Adhesives . . . . .	17
	1. Transportation . . . . .	
	2. Construction . . . . .	
	3. Other Rigid Bonding . . . . .	18
	4. Consumer Products . . . . .	18
IV.	Applications . . . . .	19
	References . . . . .	19

## 1. Fundamentals of Structural Adhesive Bonding

*Alphonsus V. Pocius*

Introduction

II.	Physical Properties of Polymers and Adhesives . . . . .	24
	A. Stress-Strain Properties . . . . .	24
	B. Dynamic Mechanical Properties . . . . .	30
III.	Surface Energy and Aspects of Cohesion . . . . .	33
	A. Thermodynamics . . . . .	33
	B. Cohesive Strength . . . . .	36
	C. Fracture Mechanics for Linear Elastic Solids . . . . .	40
IV.	Theories of Adhesion . . . . .	46
	A. Introduction . . . . .	46
	B. Wettability/Adsorption Theory . . . . .	47
	C. Contact Angles and Wettability . . . . .	47
	D. Components of Surface and Interfacial Tension . . . . .	51
	E. van der Waals Forces . . . . .	55
	F. Kinetics of Wetting . . . . .	56
	G. Mechanical Interlocking . . . . .	58
	H. Chemical Bonding at Interfaces . . . . .	60
	I. Acid-Base Interactions . . . . .	62
	J. The Diffusion Theory of Adhesion . . . . .	63
V.	Criteria for Optimum Bond Strength . . . . .	65
	<i>References</i> . . . . .	65

## 2. Phenolic Resins

*Janis Robins*

I.	Introduction . . . . .	69
	Mechanism of Phenol-Formaldehyde Reactions . . . . .	72
	A. Reactions under Strongly Acidic Conditions (pH 1-4) . . . . .	72
	B. Reactions under Weakly Acidic Conditions (pH 4-7)	74
	1. High <i>ortho</i> - <i>ortho</i> Novolacs . . . . .	74
	2. Superacidity . . . . .	77
	3. High <i>ortho</i> - <i>ortho</i> Resoles . . . . .	78
	4. Dibenzylid Ether Linkages . . . . .	80
	5. Cyclic Polynuclear Species . . . . .	82
	C. Reactions under Basic Conditions (pH 7-11) . . . . .	82
	1. Resoles . . . . .	82
	2. Self-condensation . . . . .	83
	D. Resorcinol and <i>m</i> -Aminophenol Modified Phenolic Resins . . . . .	85
	E. Modified Phenolic Resins . . . . .	86
	1. Etherified Resoles . . . . .	86
	2. Modification at the Phenolic Hydroxyl . . . . .	87
III.	Curing Reactions . . . . .	88
	A. Curing of Resoles . . . . .	88
	B. Curing of Novolacs . . . . .	90
	C. Thermal Degradation . . . . .	91
IV.	Structural Phenolic Adhesives . . . . .	92
	A. Introduction . . . . .	92
	B. Phenolic Resins for Wood Bonding . . . . .	92
	1. Phenolic Resins . . . . .	92
	2. Resorcinol Modified Novolacs . . . . .	93
	3. <i>m</i> -Aminophenol Modified Novolacs . . . . .	94

C. Polymer Blends for Metal Bonding . . . . .	94
1. Phenolic-Epoxy Blends . . . . .	95
2. Phenolic-Polyvinyl Blends . . . . .	97
3. Phenolic-Nitrile Blends . . . . .	99
4. Polyamide Phenolics . . . . .	101
5. Nylon Phenolics . . . . .	101
6. Acrylic Phenolics . . . . .	101
7. Neoprene Phenolics . . . . .	102
8. Urethane Phenolics . . . . .	102
D. Cure Conditions and Properties . . . . .	102
E. Commercially Available Materials . . . . .	106
References . . . . .	106

### 3. Epoxy Structural Adhesives

*Charles D. Wright and John M. Muggee*

I. Introduction . . . . .	113
II. Compounding Epoxy Structural Adhesives . . . . .	116
A. Overview of Adhesives and Epoxy Raw Materials . . . . .	116
B. Two-Part Room Temperature Curing Epoxy Adhesives . . . . .	117
1. Nitrogen-containing Curatives . . . . .	117
2. Sulfur-containing Curatives . . . . .	127
3. Carboxyl-containing Curatives . . . . .	128
4. Lewis Acid Catalysts . . . . .	128
5. Encapsulation . . . . .	128
C. One-Part Heat Curing Paste Adhesives . . . . .	129
1. Catalysts . . . . .	129
2. Toughening Agents . . . . .	130
3. Fillers, Filler Treatments, and Surfactants . . . . .	130
4. Thixotropic Additives . . . . .	131
5. Adhesion Promoters . . . . .	131
D. Epoxy Film Adhesives . . . . .	132
III. Recent Developments in Epoxy Structural Adhesives . . . . .	134
A. Epoxy Resins . . . . .	134
B. Room Temperature Amine Curing Agents . . . . .	137
C. Room Temperature Sulfur Curing Agents . . . . .	142
D. Room Temperature Acid Catalysts . . . . .	142
E. Heat Cure Amine Curatives and Catalysts . . . . .	144
1. Primary Amine Curatives . . . . .	144
2. Secondary Amine Curatives . . . . .	146
3. Tertiary Amine Catalysts . . . . .	149
4. Dicyandiamide and Derivatives . . . . .	152
5. Imidazole Derivatives . . . . .	154
F. Heat Cure Carboxylic Acid Curatives . . . . .	157
G. Heat Cure Anhydride Curatives . . . . .	159
H. Heat Cure Cationic Catalysts . . . . .	162
I. Flexibilizing and Toughening Agents . . . . .	164
1. Flexibilizing Agents . . . . .	165
2. Toughening Agents . . . . .	166

J. Fillers . . . . .	168
1. Reinforcing Fillers . . . . .	168
2. Glass Fillers . . . . .	169
3. Corrosion-inhibiting Fillers . . . . .	169
4. Adhesion-promoting Fillers . . . . .	169
5. Cure-promoting Fillers . . . . .	169
6. Electrical Conductivity-promoting Fillers . . . . .	169
7. Silica Fillers . . . . .	170
8. Flow Control Fillers . . . . .	170
K. Additives . . . . .	171
1. Adhesion Promoters . . . . .	171
2. Adhesive-strengthening Additives . . . . .	172
3. Heat and/or Moisture Resistance Additives . . . . .	173
4. Film-forming Additives . . . . .	173
5. Dispersing Additives . . . . .	173
<i>References</i>	174

#### 4. Polyurethane Structural Adhesives

*B. H. Edwards*

I. Introduction . . . . .	181
II. Polyurethane Chemistry . . . . .	182
III. Structure-Property Relationships in Polyurethanes	185
A. General Concepts . . . . .	185
B. Effect of Soft Segment . . . . .	187
C. Effect of Hard Segment . . . . .	188
D. Chemical Crosslinking . . . . .	190
E. Stability of Polyurethanes . . . . .	190
1. Thermal Stability . . . . .	190
2. Oxidative Stability . . . . .	191
3. Solvolytic Stability . . . . .	192
4. Stabilization . . . . .	192
IV. Polyurethane Structural Adhesive Applications . . . . .	194
A. Introduction . . . . .	194
B. Two-Part Adhesives . . . . .	195
C. One-Part Adhesives . . . . .	196
1. Moisture Cure . . . . .	196
2. Heat Cure . . . . .	197
D. Comparison of One-Part and Two-Part Systems . . . . .	200
E. Plastic and Metal Bonding . . . . .	200
1. Trends . . . . .	200
2. Substrate Preparation . . . . .	202
3. Bond Testing . . . . .	203
F. Wood Bonding . . . . .	205
<i>References</i>	209

#### 5. Anaerobic and Structural Acrylic Adhesives

*Charles W. Boeder*

I. Introduction . . . . .	217
II. Anaerobic Adhesives	218

A. Background . . . . .	218
B. Formulation Components . . . . .	218
1. Monomers . . . . .	219
2. Initiators . . . . .	224
3. Accelerators . . . . .	226
4. Stabilizers/Inhibitors . . . . .	229
5. Modifiers . . . . .	230
C. Chemistry of Anaerobic Adhesives . . . . .	231
D. End Use Applications . . . . .	233
E. Anaerobic Products and Performance	233
III. Structural Acrylic Adhesives . . . . .	235
A. Background . . . . .	235
B. Formulation Components . . . . .	236
1. Monomers . . . . .	236
2. Catalyst Systems . . . . .	237
3. Tougheners . . . . .	238
C. Chemistry . . . . .	240
D. Applications . . . . .	241
E. Commercial Product Performance . . . . .	243
References . . . . .	243

## 6. Cyanoacrylate Adhesives

G. H. Millet

I. Introduction . . . . .	249
II. Cyanoacrylate Chemistry . . . . .	250
A. General Description . . . . .	250
B. Monomer Synthesis . . . . .	252
1. Alkyl Cyanoacrylates . . . . .	252
2. Biscyanoacrylates . . . . .	254
3. 2-Substituted-1-Cyanoacrylates . . . . .	254
C. Properties of Cyanoacrylate Monomers . . . . .	255
D. Polymerization of Cyanoacrylate Monomers . . . . .	255
1. Introduction . . . . .	255
2. Initiation . . . . .	257
3. Propagation . . . . .	258
4. Chain Transfer and Termination . . . . .	258
5. Bulk Polymerization . . . . .	259
E. Polymerization Modifiers . . . . .	261
1. Initiators . . . . .	261
2. Accelerators . . . . .	262
3. Inhibitors . . . . .	263
F. Properties of Polycyanoacrylates . . . . .	266
III. Cyanoacrylate Adhesive Properties . . . . .	269
A. Bond Strength . . . . .	269
1. Introduction . . . . .	269
2. Bond Strength Modifiers . . . . .	272
B. Durability . . . . .	278
1. Introduction . . . . .	278
2. Heat Durability . . . . .	279

3. Heat Resistance Promoters . . . . .	280
4. Moisture Durability . . . . .	285
C. Other Adhesive Properties and Modifiers . . . . .	288
1. Viscosity . . . . .	288
2. Colorants and Dyes . . . . .	290
3. Miscellaneous Properties and Modifiers . . . . .	292
IV. Cyanoacrylate Application and Uses . . . . .	293
A. Bondable Substrates . . . . .	293
B. Surface Preparation . . . . .	293
1. Metals . . . . .	293
2. Polymers . . . . .	294
3. Glass and Ceramics . . . . .	294
4. Wood . . . . .	294
C. Toxicology and Safety . . . . .	294
1. Handling Precautions . . . . .	294
2. Toxicology . . . . .	295
D. Containers and Storage . . . . .	296
E. Application Methods and Equipment . . . . .	296
1. Adhesive Application . . . . .	296
2. Application Equipment . . . . .	297
F. Typical Industrial Applications . . . . .	297
V. Summary . . . . .	298
A. Advantages of Cyanoacrylate Adhesives . . . . .	298
B. Disadvantages of Cyanoacrylate Adhesives . . . . .	299
C. A Comparison of Cyanoacrylates with Other Adhesives . . . . .	300
D. A Summary of Recent Improvements to Cyanoacrylate Adhesives . . . . .	303
<i>References</i> . . . . .	303

## 7. High-Temperature Polymers and Adhesives

*K. P. Subrahmanian*

I. Introduction . . . . .	309
II. High-Temperature Polymers . . . . .	309
A. Theory of Thermal Stability . . . . .	309
B. Measurement of Thermal Stability . . . . .	311
C. Heat-Resistant Polymers . . . . .	311
1. Aromatic Conjugated Polymers . . . . .	312
2. Ladder Polymers . . . . .	312
3. Stepladder Polymers . . . . .	313
4. Aromatic Linked by Aliphatic or Functional Group . . . . .	316
III. High-Temperature Adhesives . . . . .	317
A. Condensation-Type Adhesives . . . . .	318
1. Polyimides . . . . .	318
2. Polyphenylquinoxaline . . . . .	320
B. Addition-Type Adhesives . . . . .	321
1. Norbornene End Groups . . . . .	323
2. Acetylene End Groups . . . . .	325
3. Maleimide End Groups . . . . .	328
C. Thermoplastic Adhesives . . . . .	329
D. Miscellaneous Other Polymers for Adhesive Applications . . . . .	331

IV.	Bonding Technology of High-Temperature Adhesives . . . . .	331
A.	Substrates and Surface Preparation . . . . .	331
1.	Surface Preparation of Titanium . . . . .	332
2.	Surface Preparation of Aluminum and Other Adherends . . . . .	335
B.	Comparative Properties of High-Temperature Adhesives . . . . .	335
V.	Applications of High-Temperature Adhesives . . . . .	340
A.	General Considerations . . . . .	340
B.	Applications . . . . .	340
1.	Aerospace . . . . .	340
2.	Electronics . . . . .	341
3.	Electrical . . . . .	341
4.	Automotive . . . . .	342
5.	Miscellaneous . . . . .	342
VI.	Trends and Conclusions . . . . .	342
