

CHAPTER 8. THE WEATHERING OF BITUMINOUS MATERIALS

Introduction	176
The action of weather on different types of bituminous road surfacing	176
The methods of studying durability	178
The influence of the composition of the bituminous mixture on its durability	
Full-scale road experiments on the durability of coated-macadam wearing courses	
Full-scale road experiments on the durability and surface texture of dense bituminous surfacings	183
Factors affecting the durability of bituminous binders	185
Durability tests	195
The improvement of the performance of bituminous binders	200
Appendix 8.A. The apparatus and procedure for the pressure oxidation test using the e.v.t. method of measurement	204
Summary	206
References	206

CHAPTER 9. THE DESIGN OF FLEXIBLE ROAD PAVEMENTS

Introduction	210
The constituents of flexible pavements	210
Types of flexible pavement	210
The requirements for the road pavement	211
The stresses in road structures	212
Empirical methods of pavement design	218
Recommendations for the structural design of new flexible pavements	223
Full-scale pavement design experiments	224
The design of hard shoulders	230
Summary	231
References	231

CHAPTER 10. COATED MACADAM AND FINE COLD ASPHALT

Introduction	233
Development and general properties of coated macadam	233
Basecourse and single-course coated macadam	235
Wearing course coated macadam	240
Coated macadam as a road base	245
Fine cold asphalt	246

	<i>Page</i>
Appendix 10.A. Summary of requirements for coated macadam in British Standards and related specifications	247
Summary	256
References	256

CHAPTER 11. DENSE BITUMINOUS SURFACINGS

A. ROLLED ASPHALT

Introduction	258
Nature of rolled asphalt	258
Advantages of rolled asphalt as a surfacing material	260
Selection of composition	261
Application of coated chippings to the surface	267
Resistance to skidding	269
Basecourse material	270
Rolled asphalt as a road base material	271
Thin-application rolled asphalt	272
Laying of rolled asphalt	272
Cracking of asphalt on concrete	274
Rolled asphalt for tracked vehicles	274
Coloured rolled asphalt	274

B. DENSE TAR SURFACING

Introduction	275
Laboratory design of dense tar surfacing	275
Full-scale road experiments	281
The commercial use of dense tar surfacing	286
Summary	290
References	290
Bibliography	291

CHAPTER 12. SURFACE DRESSING

Introduction	292
The functions and requirements of a surface dressing	293
The factors affecting the quality and life of surface dressings	294
The binder	294
The chippings	297
The external conditions	299
The application of the materials	301
Surface dressing of non-bituminous surfacings	310
Surface dressing with emulsion binder	311
Surface dressing under difficult conditions	312
Summary	314
References	315
Bibliography	315

CHAPTER 13. PREVENTION OF WET-WEATHER DAMAGE TO SURFACE DRESSINGS

Introduction	316
Methods of preventing wet-weather damage	317
Details of methods of preventing wet-weather damage to surface dressings	323
Appendix 13.A. Specification for the solution of an adhesion agent in light creosote oil for use in surface dressing in wet weather	331
Appendix 13.B. The Road Research Laboratory immersion tray test	332
Summary	333
References	333

CHAPTER 14. SURFACE DRESSING MACHINERY

Binder distributors	334
Fire precautions on pressure sprayers	348
Gritting machines	350
Rollers for surface dressing	354
Summary	355
References	355

CHAPTER 15. COATED-MACADAM AND ASPHALT MIXING PLANTS

Introduction	357
General types of mixing plant	357
The feeding system	362
The drying and heating system	363
The screening system	367
Proportioning and batching of aggregate	372
Proportioning of filler	377
Heating and proportioning of binder	378
Mixing units	386
Storage of mixed materials	392
Dust collection	393
Temperature control	398
Summary	402
References	402

CHAPTER 16. MACHINERY FOR THE LAYING OF BITUMINOUS SURFACINGS

Introduction	403
Heating-and-planing machinery	403
Spreading machinery	406

	<i>Page</i>
Rollers and rolling	412
Summary	414
References	414
Bibliography	415

CHAPTER 17. WET-AGGREGATE PROCESSES FOR MAKING BITUMINOUS ROAD SURFACINGS

Introduction	416
Coating wet aggregates with bitumen emulsion	417
Coating wet aggregates with binders containing adhesion agents	419
The wet-aggregate (hydrated lime) process	422
Appendix 17.A. Compositions of mixed materials for the wet-aggregate (hydrated lime) process	428
Appendix 17.B. Test procedure for use with the wet-aggregate (hydrated lime) process	434
Summary	437
References	437

CHAPTER 18. BITUMINOUS SURFACINGS FOR CITY STREETS

Introduction	439
Rolled asphalt	440
Mastic asphalt	440
Compressed natural rock asphalt	443
Unheated natural-rock-asphalt powder with coated chippings— ‘rock (non-skid) asphalt’	445
Lake asphalt sand carpet with contiguous coated chippings	447
Dense tar surfacing and fine cold asphalt	448
Appendix 18.A. Naturally occurring bitumen	450
Appendix 18.B. The treatment of granite setts and wood blocks	452
Summary	453
References	453
Bibliography	454

CHAPTER 19. THE ‘RETREAD’ PROCESS

Introduction	455
Materials suitable for the retread process	455
Method of carrying out the retread process	457
Summary	461
References	461

CHAPTER 20. THE SAMPLING AND ANALYSIS OF BITUMINOUS ROAD MATERIALS

Introduction	462
Methods of sampling bituminous road mixtures.	463
Determination of the proportions of binder, coarse and fine aggregate, filler and moisture	468
Recovery of binder for examination	482
Determination of apparent specific gravity and voids	485
Summary	489
References	490

CHAPTER 21. THE SAMPLING AND TESTING OF BITUMINOUS ROAD BINDERS

Introduction	491
Sampling of bituminous road binders	493
Tests for bitumens and tars	496
Tests for road emulsions	518
Appendix 21.A. Relationship between technical viscosity scales	521
Summary	524
References	525

CHAPTER 22. CONTROL IN THE MANUFACTURE AND LAYING OF BITUMINOUS ROAD MATERIALS

The need for control	526
Monetary savings due to control	527
Control of surface dressing work	530
Control when mixing and laying pre-mixed bituminous surfacings.	534
Keeping of records	540
Summary	541
References	541

CHAPTER 23. THE PREVENTION AND CURE OF CRACKS IN BITUMINOUS SURFACINGS OVER CONCRETE

Introduction	542
The causes of cracking	542
The prevention of cracking	547
The treatment of cracked surfacings	553
Summary	554
References	555

CHAPTER 24. RUBBER IN BITUMINOUS ROAD MATERIALS

Introduction	557
Types of natural rubber used in bituminous road surfacings	558

	<i>Page</i>
The effects of rubber on the properties of bituminous binders	559
The effects of heat and mastication on rubber in bitumen	561
Methods of mixing rubber with road materials	563
Rubberized binders in surface dressing	564
Rubberized mastic asphalt	565
The use of rubber in rolled asphalt and bitumen macadam	567
Latex in bitumen emulsions	569
Rubberized slurry seals	569
Appendix 24.A. The determination of rubber content by iodine value and specific viscosity measurements	569
Summary	571
References	571

CHAPTER 25. ROAD-MARKING MATERIALS

Introduction	574
Types of road-marking material	574
Requirements of road-marking materials	575
Materials for centre-line and traffic-lane markings for roads other than city streets	576
Marking materials for city streets	585
Summary	587
References	588

CHAPTER 26. EQUIPMENT FOR A CENTRAL LABORATORY AND A MOBILE LABORATORY FOR THE TESTING OF BITUMINOUS ROAD MATERIALS

Introduction	590
Safety precautions	590
Equipment required	591

CHAPTER 27. DEFINITIONS OF TERMS

Introduction	596
Definitions	596

INDEX	601
