INTRODUCTION

Chapter 1 FUNDAMENTALS OF HYDRAULICS

1.1	What is hydraulics?	
1.2	Why are hydraulic systems used?	3
1.3	Theory of hydraulics	9
1.3.1	Fluidity	10
1.3.2	Pascall's laws	10
1.3.3	Flow effects	10
1.3.4	Bernoulli's theorem	11
1.3.5	System definition	11
1.3.6	System pressure	12
1.3.7	Work power, heat and efficiency	14

Chapter 2 HYDRAULIC FLUIDS 18

2.	Notes on de-aeration of hvdraulic fluids	22
----	--	----

Chapter 3 HYDRAULIC SYSTEMS 24

3.1	Heat in hydraulic systems	27
3.2	Basic industrial hvdraulic svstems	29

Contents

3.3	System inputs	29
3.4	System outputs	32
3.5	The control of the system	33
3.6	Stopping and starting	34
3.6.1	Pressure shedding	34
3.6.2	Venting	34
3.6.3	By-passing	36
3.6.4	Accumulator method	36
3.6.5	Flow shedding controls	40
3.7	Pilot control systems	40
3.8	Speed control systems	43
3.8.1	Regenerative connection	45
3.8.2	Volume metering and flow dividing circuits	48
3.9	Force or torque control systems	55
3.10	Directional control systems	56
3.11	Servo systems	57
3.12	Reaction control circuits	59
3.12.1	Pulsation damping	64
3.12.2	Decompression circuits	65
3.13	Hydrostatic transmissions	67
3.14	Filtration systems	69
3.14.1	Pump inlet filtration	73
3.14.2	Pressure line filtration	73
3.14.3	Exhaust line filtration	76
3.14.4	Supercharged inlet filtration	76
3.14.5	Air breather filter	77
3.15	Heat exchangers	78
Chapter 4	HYDRAULIC SYSTEM COMPONENTS	80
4.1	The reservoir	80
4.1.1	A filling connection	83
4.1.2	Emptying connection and drain	84
4.1.3	Pump suction lines	84
4.1.4	Exhaust and drain lines	

Contents

4.1.5	Piping—general	87
4.1.6	Further features	87
4.2	Components at the input to the system	88
4.2.1	The pump	90
4.2.2	Other hydraulic flow generators	94
4.3	Power output devices—actuators	94
4.3.1	Rotary actuators or hydraulic motors	95
4.3.2	Hydraulic balance	95
4.3.3	Semi-rotary actuators and high torque motors	97
4.3.4	Linear actuators	99
4.4	Hydraulic valves and control gear	103
4.4.1	Spool valves and seated valves	104
4.4.2	Valve sizing	114
4.4.3	Valve operation	115
4.4.4	Valve mounting	116
4.4.5	Hydraulic accumulators	118
4.4.6	Relief valves	121
4.4.7	Reducing valves	123
4.4.8	Check valves	124
4.4.9	Sequence valves	124
4.4.10	Intensifier	125
4.4.11	Pilot operated non-return valves and prefill valves	126
4.4.12	Directional control valves—single stage	127
4.4.13	Directional control valves—two stage	128
4.4.14	Servo valves	129
4.4.15	Restrictors	130
4.4.16	Flow metering valve	131
4.4.17	Flow dividing valves	135
4.4.18	Time delay valves	136
4.4.19	Temperature compensation	138
4.5	System accessories	139
4.5.1	Filters and strainers	139
4.5.2	Pressure gauges	141
4.5.3	Flow meters	142

Contents

	4.5.4	Pressure switches	143
	4.6	Hydraulic tools	144
Chapter 5	INSTALLATION OF HYDRAULIC SYSTEMS		146
	5.1	Hydraulic assemblies	149
	5.2	Hydraulics on the machine	150
	5.3	Pipework	151
	5.3.	Tube fittings, seals and adaptors	154
	5.4	Working the tube	165
	5.5	Flexible hoses and quick action couplings	172
	5.5.1	Swivel couplings	177
	5.6	Pipe anchoring	177
	5.7	Painting	181
	5.8	Filling	182
	5.9	Electrical connections	183
	5.10	Installation check-over	184
	5.11	Storage or shipment of hydraulic equipment	184
Chapter 6	FLUIDS HANDLING, MAINTENANCE AND STORAGE PROCEDURES		185
	6.1	Oil storage and transfer	185
	6.2	Water in the reservoir	187
	6.3	Filtration	187
	6.4	Fluid sampling	189
	6.5	Fluids other than mineral oil	191
	6.6	Draining the system and cleaning the reservoir	192
	6.7	Notes on reservoir painting	196
Chapter 7	OPERATION AND MAINTENANCE PROCEDURES		197
		Understanding the principles of hydraulics	197
	7.1	Cause of pressure	198

Contents

7.1.2	Cause of energy loss by leakage	198
7.1.3	Cause of energy loss by friction (pressure loss)	198
7.1.4	Work, and power, assessment	199
7.1.5	Heat generation	200
7.1.6	Power balance of the system	200
7.2	Cleanliness	200
7.3	Commissioning procedure	201
7.3.1	Check machine and controls	201
7.3.2	Check direction of rotation	201
7.3.3	Air bleed points	202
7.3.4	Start pumps	202
7.3.5	Air bleed	202
7.3.6	Operate controls	202
7.3.7	Start cycle (unloaded)	203
7.3.8	Valve settings	203
7.3.9	Pressure valve adjustment (series)	204
7.3.10	Pressure valve adjustment (parallel)	206
7.3.11	Flow adjustments	208
7.3.12	Check-over	209
7.3.13	Preventive maintenance	209
7.4	Starting and stopping	209
7.5	Information, equipment and facilities	210
7.5.1	Circuit diagram	211
7.5.2	Components data	211
7.5.3	Preventive maintenance schedules	212
7.5.4	Working area	212
7.5.5	Tool kit	213
7.6	Modifications and repair	215
7.7	Pressure gauge connection	216
7.8	Sealing methods	218
7.8.1	Seal compatibility and dynamic seals	225
7.9	Charging an accumulator	229
7.9.1	Charging procedure	231
7.9.2	Properties of nitrogen	237
7.9.3	Notes on burst accumulator bladders	237

Contents

7.10	Fault finding	238
7.11	Summary of fault finding procedures	246
7.12	Trends	249
7.12.1	Modular systems	249
7.12.2	Miniaturised systems	249
7.12.3	Sandwich panels and manifold blocks	249
7.12.4	Fluidics	250
7.12.5	Low capacity systems	251
7.12.6	Hydrostatic bearings	251
7.12.7	Rotary cylinders	251
Chapter 8	SYSTEM DIAGNOSIS—WORKED EXAMPLES	252
8.1	Pressure intensification and regenerative connection	252
8.2	Sizing a drilled orifice	257
8.3	Heat generation and power wastage	260
8.3.1	Back pressure and restriction	260
8.3.2	Temperature rise	270
8.4	Speed control circuits and metering efficiency—example	274
8.5	The charge pressures in gas loaded accumulators	280
8.6	Pressure rating of pipes and tubulars	289
8.6.1	Stressing of components	293
8.7	Flow rating of pipes and tubulars	294
8.7.1	Pipe sizing from Table 5.2 for different fluids and pressure drops	295
8.8	Hydraulic motor characteristics	298
Chapter 9	S. I. UNITS AND WORKED EXAMPLES	
9.1.1	Practical S.I. units for hydraulics	300
9.1.2	Other practical S.I. units	303
9.2	Pressure intensification and regenerative connection	

Contents

9.3	Sizing a drilled orifice	311
9.4	Heat generation and power wastage	314
9.4.1	Back pressure and restriction	315
9.4.2	Power balance and cycle efficiency	321
9.4.3	Temperature rise	325
9.5	Speed control circuits and metering efficiency—worked example	327
9.5.1	Meter in	328
9.5.2	Meter out	328
9.5.3	Bleed off	330
9.6	The charge pressures in gas-loaded accumulators	332
9.7	Pressure rating of pipes and tubulars	340
9.8	Flow rating of pipes and tubulars	341
9.8.1	Other fluids	343
9.9	Hvdraulic motor characteristics	346
Chapter 10	BRADBURY SPEEDRAM	348
	APPENDIX: SUPPLEMENTARY DATA	355
	INDEX	367
