Introduction

Interaction of Engineers and Biologists in Water Quality Management—

W. W. ECKENFELDER, JR.

The ABC's of Pollutant Bioassay Using Fish—J. B. SPRAGUE

Terminology	8
The Basic Method	8
Other Types of Tests and Application of Results	23

Mixing Zone Concepts—C. M. FETTEROLF, JR. 31

State Standards	32
Concepts to Consider	36
Concluding Remarks	44

Biological Monitoring of the Aquatic Environment—C. I. WEBER 46

Types of Monitoring	50
Data Storage and Retrieval System	51
Biological Methodology	53
Developing Techniques	56
Conclusion	58

Bacteria and the Assessment of Water Quality—T. L. BOTT 61

Health Aspects	62
Bacterial Activity and Water Quality	68
Summary and Conclusions	72

Use of Algae, Especially Diatoms, in the Assessment of Water Quality—

RUTH PATRICK 76

Field Evaluations of Algae as Indicators	77
Laboratory Use of Algae as Indicators	90
Discussion	91

Use of Aquatic Invertebrates in the Assessment of Water Quality—

A. R. GAUFIN 96

Changes in Aquatic Ecosystems Caused by Organic Pollution	97
Macroinvertebrates as Indicators of Organic Pollution	98
Aquatic Macroinvertebrate Communities as Indicators of Organic Pollution	106
Indicators of Other Types of Pollution	109
Discussion	111
Aquatic Communities as Biological Indices	112
Summary	115

Continuous-Flow Bioassays with Aquatic Organisms: Procedures and Applications—W. A. BRUNGS 117

Conditions of Bioassay	118
Uses of Bioassay	120
Techniques of Continuous-Flow Bioassays	121
Summary	125

A Tentative Proposal for a Rapid In-Plant Biological Monitoring System	127
—JOHN CAIRNS, JR., R. E. SPARKS, AND W. T. WALLER	
Procedure	128
Results	138
Conclusions	143
Rapid Biological Monitoring Systems for Determining Aquatic Community Structure in Receiving Systems—JOHN CAIRNS, JR., K. L. DICKSON, AND GUY LANZA	148
Why Include Biological Monitoring	149
The State of the Art in Biological Monitoring	149
Evaluating the Effects of Pollution on Aquatic Life	150
Diversity Indices	154
Rapid In-Stream Systems	155
The Sequential Comparison Index—A Community Structure Analysis	156
Laser Holography in Pollution Monitoring	157
In-Stream Monitoring System	158
Use of Toxicity Tests with Fish in Water Pollution Control—C. E. STEPHAN AND D. I. MOUNT	164
Short-Term Exposures	166
Long-Term Exposures	166
Chronic Toxicity Tests	168
Mixing Zones	169
Toxicological Data Bank	170
Direct, Indirect, and Induced Effects	171
Safety Factors	175
Assessment of Fish Flesh Tainting Substances—N. A. THOMAS	178
Methods	182
1968 Results	186
1969 Results	188
1970 Studies	188
Discussion	189
Conclusions	191
Use of Histologic and Histochemical Assessments in the Prognosis of the Effects of Aquatic Pollutants—D. E. HINTON, W. M. KENDALL, AND B. B. SILVER	194
Preservation of the Specimen	194
Assessment of Toxicity of Substances	197
Histologic and Histochemical Assessment in Fish Exposed to Methyl Mercury	203
Summary	207
Stabilization Oxygen Demand—V. T. STACK, JR.	209
Biological Stabilization Reactions	210
Stabilization Oxygen Demand Methods	215
Conclusions	220
Microbiological Inhibition Testing Procedure—P. J. MARKS	221
Growth Inhibiting Compounds	222
Procedure for Microbiological Inhibition Test	223
Discussion	226
Use of Artificial Substrate Samplers to Assess Water Pollution—T. W. BEAK, T. C. GRIFFING, AND A. G. APPLEBY	227
Historical Development of Artificial Substrates	228
Critical Evaluation of Types of Samples	231

Comparison of Artificial Substrate with Other Methods for Benthic Macroinvertebrate Sampling	236
Periphyton Samplers	237
Intertidal Plates	238
Conclusions	239
Mobile Bioassay Laboratories—R. M. GERHOLD	242
Historical Background	243
Justification for Mobile Bioassay Laboratories	243
Applications	246
Design Problems	249
Conclusions	254
