

Contents and Subject Index

1. FUNDAMENTAL CONSIDERATIONS IN THE REMOVAL OF ORGANIC SUBSTANCES FROM WATER—A GENERAL OVERVIEW	1
<i>Louis Koenig</i>	
Introduction	
The States of Aggregation of Organics in Water	
Organics as a Disperse Phase	..2
Colloidal Particles	..2
Adsorbed Organics	..2
The Embodiments of the Physical States	..3
The Chemical Nature of Organics	..3
The Multiplicity of Organic Compounds	..3
The Classes of Organic Compounds	..4
"Natural and Unnatural" Compounds	..4
The Organics in Water and Wastewater	..5
Organics in Natural Waters	..5
Organics in Drinking Water	..6
Organics in Municipal Wastewaters	..6
Organics in Industrial Wastewaters	..8
Physical Mechanisms for the Removal of Organics	..8
Fugacity and Activity	..8
Physical Relocation Concepts	..10
The Driving Forces and Mechanisms in Physical Relocation	..11
Gravity	..11
Centrifugation	..11
Magnetism	..11
Surface Tension	..12
Foam Fractionation	..12
Froth Flotation	..12
Solvent Extraction	..13

Contents and Subject Index

Stripping 13
Distillation 13
Osmosis 13
Reverse Osmosis 14
Adsorption 14
Electrokinetics 16
Electrophoresis 16
Electroosmosis 16
Electrodialysis 16
Freezing 16
Hydration 17
Filtration 17
Microfiltration or Ultrafiltration 18
Flocculation and Sedimentation 18
Chemical Mechanisms for the Removal of Organics 20
Role of Free Energy 20
Chemical Oxidation 20
Electrolytic Oxidation 21
Role of Radiation 22
Chemical Precipitation 22
Ion Exchange 23
Beyond the State-of-the-Art 23
2. COAGULATION-SEDIMENTATION-FILTRATION PROCESSES FOR REMOVING ORGANIC SUBSTANCES FROM DRINKING WATER	26
<i>James K. Edzwald</i>	
Introduction 26
Background 27
Trihalomethane Formation 29
Trihalomethane Measurements 29
Instantaneous THMs 30
Terminal THMs 30
Trihalomethane Formation Potential 30
Factors Affecting THM Formation 33
Coagulation, Sedimentation, and Filtration in Water	
Treatment Practice: Principles 35
Introduction 35
Particles 35
Coagulation-Flocculation 39
Particle Destabilization 39
Particle Transport 40
Chemical Coagulants 41
Filtration 43
Process Selection 45
Coagulation Effectiveness Factor 46
Jar Tests and Direct Filtration 48
Organics Removal: Concepts 48
Humic Substances 48

Coagulation of Color50
Direct Filtration53
Organics Removal and THM Reduction: Water Treatment Practice.55
Durham, N.C.55
Canton, N.Y.58
Final Comments58
References61

3. ADSORPTION OF ORGANIC SUBSTANCES IN DRINKING WATER 65

Francis A. DiGiano

Introduction.65
Early History65
The 1960's: A Growing Interest65
The 1970's: Evolving Public Policy66
Principles of Adsorption68
General Considerations.68
Use of Mathematical Models72
Factors Influencing Adsorbability.73
Process Development79
The Case of THM's and Humic Substances79
Competition for Adsorption Sites.87
Adsorption on Synthetic Resins.91
Regeneration of Adsorbents94
Microbial Activity on Activated Carbon.98
Influence of Pretreatment	100
State of the Art.	101
Existing Adsorption Systems.	101
Process Design	102
Selection of Activated Carbon	104
Costs.	105
Process Control.	106
A Look to the Future.	110
References	112

4. REMOVAL OF ORGANIC SUBSTANCES FROM WATER BY AIR STRIPPING 119

Perry L. McCarty

Introduction.119
Principles of Removal by Air-Stripping120
General120
Mass Transfer120
Diffusion.120
Henry's Law.120
Equilibrium Considerations.121
Rates of Mass Transfer121
Properties of Hazardous Organic Compounds124
Air-Stripping Processes126

Types	126
Design Factors Affecting Removal Efficiency	128
Countercurrent Packed Tower	128
Flooding	133
Cross-Flow Stripping Tower	134
Stripping Basins	140
Summary and Discussion	143
References	146
5. OXIDATION OF ORGANIC SUBSTANCES IN DRINKING WATER	148
<i>William H. Glaze</i>	
Introduction	148
Basic Discussion of Oxidation Processes	149
Chlorination as an Oxidation Process	151
Ozonation	153
Ozone as an Aid to Color Removal and Flocculation	155
Ozone for Destruction of THM Precursors Prior to	
Chlorination	156
Ozonolysis of Organic Micropollutants	156
Ozone Combined with Activated Carbon	156
Cost of Ozonation in Water Treatment	156
Summary of Advantages and Disadvantages of Ozone for	
Water Treatment.	159
Chlorine Dioxide	161
Formation of THMs and Other By-Products	161
Chlorine Dioxide as an Oxidant in Water Treatment	164
Cost of Chlorine Dioxide Treatment	164
Other Oxidants	166
Potassium Permanganate	166
Hydrogen Peroxide	166
Ferrate	166
Ozone/Uv and Other Catalytic Oxidation Processes	166
Ozone with Ultraviolet Radiation	167
Hydrogen Peroxide with Ultraviolet Radiation	167
Hydrogen Peroxide Catalyzed Ozonation	167
Heavy Metal Catalyzed Ozonation and Peroxidation	167
Future Trends	169
Acknowledgement	170
References	170
6. REDUCTION OF ORGANIC SUBSTANCES IN MUNICIPAL WASTEWATER BY BIOLOGICAL PROCESSES	175
<i>Robert L. Irvine</i>	
Perspective and Approach	175
Definition of Terms	176
The Initial State	178
The Goal State	180
Organic Priority Pollutants	181

The Biological Process	186
Suspended Growth Systems.	188
Process Considerations in Suspended Growth Systems	189
Current Research—Suspended Growth Systems	191
Fixed Film Reactors	194
Current Research—Fixed Film Systems	195
Improving Process Performance	195
Future.	196
Acknowledgements	201
References	201
7. REMOVAL OF ORGANIC SUBSTANCES FROM MUNICIPAL WASTEWATERS BY PHYSICOCHEMICAL PROCESSES	203
<i>Walter J. Weber, Jr. and Frederick E. Bernardin, Jr.</i>	
Introduction.	203
Historic Perspectives	204
The Decade of the Seventies	205
Overview of Physicochemical Treatment Processes.	208
Degradation Processes	208
Separation Processes	209
Coagulation/Sedimentation	209
Filtration.	209
Membrane Processes.	213
Adsorption Processes	213
Overview Summary	215
Adsorption and Activated Carbon Technology	215
Principles of Adsorption	215
Properties of Activated Carbon	216
Adsorption on Activated Carbon	221
Reactor Systems	222
Adsorber Modeling and Design.	226
Bioactive Carbon Systems	227
Reactivation and Regeneration.	231
Case Histories	237
South Tahoe, CA.	239
Orange County, CA	239
Niagara Falls, NY	239
Vallejo, CA	240
Vernon, CT	240
The Future of PCT in Municipal Waste Treatment	242
References	248
8. THE IMPACT OF ORGANIC SUBSTANCES ON MUNICIPAL WASTEWATER REUSE.	255
<i>J. Carrell Morris and John F. Donovan</i>	
Introduction.	255
Rationale for Reuse.	255
Impact of Organic Substances on Reuse.	256

Types and Examples of Municipal Reuse	256
Need for Control of Organic Substances in Waters Intended for Reuse	262
Quality Requirements for Organic Substances in Reuse of Municipal Wastewaters.	264
General Aspects	264
Agricultural and Landscape Use	264
Recreational Uses	265
Industrial Uses	266
Groundwater Recharge and Potable Reuse	266
Methods of Control of Organic Substances	267
Source Control	267
Treatment	267
Lime Treatment	267
Activated Carbon Adsorption	268
Air Stripping	268
Reverse Osmosis	272
Chlorination	272
Ozonation	272
Present Problems and Future Outlook	272
An Assessment of Present Problems	272
Overview of Current Research Efforts	274
Future of Reuse	275
References	275
9. MANAGEMENT OF RESIDUALS SEPARATED FROM MUNICIPAL WASTEWATER	278
<i>Richard I. Dick</i>	
Introduction.	278
General Characteristics of Municipal Wastewater Treatment Plant Sludges	279
Nature and Magnitude of Municipal Sludge Management	280
Chemical Composition of Municipal Sludge	280
Organic Chemical Constituents of Sludges	282
Inorganic Chemical Constituents of Sludges	283
Sludge Treatment Processes.	284
Processes for Removing Water from Sludge.	284
Thickening	284
Dewatering	285
Conditioning	285
Drying and Dehydration	286
Processes for Altering Sludge Quality	286
Stabilization	286
Combustion	288
Inactivation of Organisms and Viruses	289
Detoxification Processes	290
Ultimate Reclamation or Disposal of Municipal Sludges	290
Reclamation of Sludge Constituents	291

Contents and Subject Index

Ultimate Disposal to Water	291
Ultimate Disposal to the Land	292
Future Developments in Municipal Sludge Management	294
Desirable Overall Municipal Sludge Management Developments	294
Desirable Future Developments Concerning Organic Compounds in Sludge	295
Notes	296
References	298

10. REDUCTION OF ORGANICS BY BIOLOGICAL TREATMENT 305

Raymond C. Loehr

Introduction	305
General	305
Treatment Systems	305
Legislation	307
Organic Pollutants	308
General	308
Biodegradable Organics	308
Nonbiodegradable and Toxic Organics	310
Historical Data Base	311
Relative Concentrations of Organic Pollutants	311
Biological Treatment	311
General	311
Important Factors	312
Temperature	312
Solids Retention Time	313
Nutrients	313
Oxygen	314
pH	314
Inhibition and Toxicity	314
Biological Treatment Processes	314
Activated Sludge	314
Aerated Lagoons	315
Oxidation Ponds	316
Trickling Filters	317
PACT Process	318
Sedimentation	318
Effluent Quality	319
Pollutant Removal Mechanisms	320
Aeration	321
Adsorption on Sludge	321
Microbial Degradation	322
Municipal Waste Treatment	322
General	322
The 40 City Study	322
Other Studies	324
Summary	324
Industrial Waste Treatment	325

General	325
Chemical Industry	325
Leather Tanning and Finishing	331
Specific Organic Compounds	331
Summary	331
Future Development and Needs	331
General	331
Developments	333
Needs	334
Mechanisms of Removal	334
Full-Scale Systems	334
Low Pollutant Concentrations	334
Measurement	335
Improved Processes	335

REMOVAL OF ORGANIC COMPOUNDS FROM INDUSTRIAL WASTEWATERS USING GRANULAR CARBON COLUMN PROCESSES

337

Robert P. O'Brien, Joseph L. Rizzo, and Wayne G. Schuliger

Historical Review	337
Types of Organics Removed in Existing Systems	338
Review of Carbon Feasibility	338
Review of Operating Systems	338
Pretreatment Requirements for Adsorption Systems	345
Conditions Requiring Pretreatment	345
Key Design Parameters	346
Wastewater Survey	346
Evaluating Adsorption Feasibility	346
Dynamic Column Testing	347
Reactivation Testing	350
Design Options	350
Granular or Powdered Carbon	351
On-Site vs. Off-Site Regeneration	352
Adsorption System Type	352
Fixed-Bed System (Non-Expanded)	352
Pulse-Bed System (Non-Expanded)	353
Up-Flow Expanded Bed	354
System Configuration	354
Fixed Bed	354
Pulse Bed	355
Selection of Type of Fixed Bed	356
Regeneration	356
Types of Equipment for Thermal Reactivation	356
Environmental Considerations	356
Energy Considerations	357
Capital and Operating Cost Estimates	357
Adsorption System Costs	357
Reactivation System Costs	358

Energy Requirements	358
Monitoring Techniques	360
Future Development Needs	361
Simpler Analytical Tools & Tests Required	361
More Efficient Reactivation Technology Needed	361
Improved Materials of Construction for Adsorption Systems Needed	
Improved Materials of Construction for Reactivation Systems Needed	361
Improvement Needed in Adsorption System Underdrains	361
More Effective Methods of Recovery Needed	361
References	362

12. SEPARATION OF ORGANIC SUBSTANCES IN INDUSTRIAL WASTEWATERS BY MEMBRANE PROCESSES 363

Ronald F. Probstein, Calvin Calmon, and R. Edwin Hicks

Introduction	363
Membrane Processes	363
Mechanism and Operation of Reverse Osmosis	364
Mechanism and Operation of Ultrafiltration	368
Membrane and Module Development	369
Membrane Development	369
Loeb-Sourirajan Membranes	370
Hollow Fiber Membranes	371
Composite Membranes	371
Dynamic Membranes	372
Module Development	372
Organics Separation by Reverse Osmosis	374
Hydrocarbons	377
Oxygenated Compounds	377
Nitrogen Containing Compounds	380
Pesticides and Priority Pollutants	380
Industrial Applications	381
Textile Industry	381
Food Industry	382
Oily Wastes	383
Pulp and Paper Industry	383
Oil Shale Industry	384

13. THE IMPACT OF ORGANIC SUBSTANCES ON WASTEWATER RECYCLING IN INDUSTRY 392

Robert H. Culver and John F. Donovan

Introduction	392
-------------------------------	------------

Contents and Subject Index

The Concept of Recycling	392
The Need for Recycling	392
Freshwater Use by Industry	393
Status of Wastewater Recycling by Industry	393
Petroleum Refining Industry	393
Textile Industry	394
Pulp and Paper Industry	394
Organic Chemical Production	395
Photographic Processing	395
General Considerations	396
Approach to Plan Development	396
Impact of Organic Substances on Recycle	398
Specific Plant Experience	399
Chemical R&D Facility	399
Poultry Processing	401
Recycling in a Dairy	401
Elements of a Strategy to Increase Recycling	403
References	406
14. MANAGEMENT OF ORGANIC RESIDUALS SEPARATED FROM INDUSTRIAL WASTES	408
<i>C. Lue-Hing, T.B.S. Prakasam, and D. Zenz</i>	
Introduction	408
Resource Conservation and Recovery Act	408
Methods for Determining Quantities of Waste Residuals	409
State and National Hazardous Waste Quantities	409
Wastes from Primary Industries	409
Textile Industry	410
Plastic Materials and Synthetics Industry	412
Paint Formulating Industry	418
Petroleum Refining Industry	419
Organic Chemicals Industry	425
Explosives Industries	428
Food Industry	428
Waste Residuals from Other Industrial Categories	431
Wastes from Service Industries	431
Pesticide Application Industry	431
Drum Reconditioning Industry	433
Gasoline Service Stations and Related Industry	433
Residual Management Technology	433
Sludge Conditioning	433
Sludge Concentration	434
Incineration	435
Evaporation	439
Other Methods	441
Disposal—Current Practices	442
Evolving Technology	450
Performance of Current Systems—Overview	453
