

## CONTENTS

	Page
Preface	vii
1. Introduction	1
2. Quality of Water and Treatment required	7
3. Pre-treatment	21
4. Coagulants and coagulant aids	37
5. Mixing and flocculation	51
6. Theory and principles of sedimentation	61
7. Settling basins : Practical considerations and choice	73
8. Settling basins : types and operation	81
9. Filtration	111
10. Disinfection	135
11. Waterworks wastes and sludge	143
12. Additional treatment processes	151
13. Prevention of corrosion	161
14. Simple laboratory procedures and sampling	167
Appendix 1 : Typical installations	171
Glossary	197
References	207
Conversion factors	211
Index	213
