<b>1</b>	<b>Cross-Flow Membrane Applications in the Food Industry</b>	<b>1</b>
	<i>Frank Lipnizki</i>	
1.1	Introduction	1
1.2	Dairy Industry	2
1.2.1	Dairy Industry Overview	2
1.2.2	Key Membrane Applications	3
1.2.2.1	Removal of Bacteria and Spores from Milk, Whey and Cheese Brine	3
1.2.2.2	Milk Protein Standardization, Concentration and Fractionation	5
1.2.2.3	Whey Protein Concentration and Fractionation	5
1.2.2.4	Whey Demineralization	7
1.2.2.5	Cheese Manufacturing	8
1.3	Fermented Food Products	9
1.3.1	Beer	9
1.3.1.1	Beer from Tank Bottoms/Recovery of Surplus Yeast	9
1.3.1.2	Beer Clarification	11
1.3.1.3	Beer Dealcoholization	11
1.3.2	Wine	12
1.3.2.1	Must Correction	13
1.3.2.2	Clarification of Wine	13
1.3.2.3	Rejuvenation of Old Wine ( <i>Lifting</i> )	13
1.3.2.4	Alcohol Removal	14
1.3.3	Vinegar	14
1.3.3.1	Clarification of Vinegar	15
1.4	Fruit Juices	15
1.4.1	Fruit-Juice Clarification	16
1.4.2	Fruit-Juice Concentration	17
1.5	Other Membrane Applications in the Food Industry	17

1.5.1	Membrane Processes as Production Step	18
1.5.2	Membrane Processes for Water and Wastewater	18
1.6	Future Trends	18
1.6.1	New Applications of Membrane Processes	20
1.6.2	New Membrane Processes	20
1.6.2.1	Pervaporation	21
1.6.2.2	Electrodialysis	21
1.6.2.3	Membrane Contactors – Osmotic Distillation	22
1.6.3	Integrated Process Solutions: Synergies and Hybrid Processes	23
	References	23
<b>2</b>	<b>Membrane Processes for Dairy Fractionation</b>	<b>25</b>
	<i>Karin Schroën, Anna M.C. van Dinther, Solomon Bogale, Martijntje Vollebregt, Gerben Brans, and Remko M. Boom</i>	
2.1	Introduction	25
2.2	Membrane Separation of Components	27
2.2.1	Removal of Milk Fat from Whole Milk	27
2.2.2	Removal of Bacteria and Spores from Skim Milk (Cold Pasteurization)	27
2.2.3	Concentration of Casein Micelles in Skim Milk	28
2.2.4	Recovery of Serum Proteins from Cheese Whey	30
2.3	Methods to Enhance Membrane Separation	30
2.3.1	Critical Flux Concept	31
2.3.2	Uniform Low Transmembrane Pressure Concept (UTP)	32
2.3.3	Turbulence Promotion	32
2.3.4	Backpulsing and Flow Reversal	33
2.3.5	Other Methods	33
2.4	Use of Models for Membrane Separation	34
2.5	How to Get from Separation to Fractionation	35
2.5.1	Membranes with Uniform Pore Size	36
2.5.2	Simulation of Particle Behavior	37
2.5.3	Membrane Modification	37
2.6	Outlook	38
	References	39
<b>3</b>	<b>Milk and Dairy Effluents Processing: Comparison of Cross-Flow and Dynamic Filtrations</b>	<b>45</b>
	<i>Michel Y. Jaffrin, Valentina S. Espina, and Matthieu Frappart</i>	
3.1	Introduction	45
3.1.1	Properties and Applications of Various Proteins	45
3.1.1.1	Caseins	45
3.1.1.2	Whey Proteins	45
3.2	Applications of Membrane Cross-Flow Filtration to Milk Processing	46
3.2.1	Milk Microfiltration	46
3.2.1.1	Bacteria and Spore Removal	46

3.2.1.2	Casein Micelles Separation from Whey Proteins	47
3.2.2	Milk Ultrafiltration (UF)	48
3.2.2.1	Total Proteins Concentration	48
3.2.2.2	Whey-Protein Fractionation	49
3.2.3	Applications of Milk Nanofiltration (NF) and Reverse Osmosis (RO)	50
3.2.3.1	Treatment of Cheese Whey and Fabrication of Yogurts	50
3.2.3.2	Treatment of Dairy Effluents	51
3.3	Dynamic Filtration	51
3.3.1	Principle and Advantages of Dynamic (Shear-Enhanced) Filtration	51
3.3.2	Industrial Dynamic Filtration Systems	52
3.3.3	Application of Dynamic Filtration to Skim-Milk Processing	55
3.3.3.1	Casein Separation from Whey Proteins by MF	55
3.3.3.2	Dynamic Ultrafiltration of Skim Milk	60
3.3.3.3	Total Protein Concentration by UF for Cheese Manufacturing	63
3.3.3.4	$\alpha$ -La and $\beta$ -Lg Protein Fractionation by UF	64
3.3.4	Treatment of Dairy-Process Waters by Dynamic NF and RO	66
3.4	Conclusion	69
	References	70
<b>4</b>	<b>Electrodialysis in the Food Industry</b>	<b>75</b>
	<i>Jamie Hestekin, Thang Ho, and Thomas Potts</i>	
4.1	Introduction	75
4.2	Technology Overview	76
4.2.1	Principle of the Electrodialysis Process	76
4.2.2	System Design	79
4.2.2.1	Concentration Polarization, Limiting Current Density, Current Utilization, and Power Consumption	79
4.2.2.2	System Design and Cost Analysis	80
4.3	Electrodialysis Applications in the Food Industry	82
4.3.1	Wine Industry	83
4.3.2	Juice and Sugar Industry	85
4.3.3	Dairy Industry	88
4.3.4	Protein Fractions	94
4.4	Hybrid Technologies	96
4.4.1	Electrodeionization	96
4.4.2	Electrochemical Coagulation	97
4.4.3	Electroreduction	98
4.5	Conclusion and Future Innovations	98
	References	101
<b>5</b>	<b>Membrane Processes in Must and Wine Industries</b>	<b>105</b>
	<i>Maria Norberta De Pinho</i>	
5.1	Introduction	105
5.2	Wine Clarification by Microfiltration and Ultrafiltration	106
5.3	Wine Tartaric Stabilization by Electrodialysis	111

- 5.4 Influence of MF/UF Polysaccharide Removal on Wine Tartaric Stability 113
- 5.5 Nanofiltration of Grape Must for Sugar/Organic Acids Fractionation 115
- References 117
  
- 6 New Applications for Membrane Technologies in Enology 119**  
*Martine Mietton Peuchot*
- 6.1 Reduction of Alcohol Content 119
- 6.1.1 Reduction of Must Sugars to Obtain a Lower Alcohol Content in Wines 119
- 6.1.2 Reduction of Alcohol Content in Wine 121
- 6.2 Reduction of Malic Acid in Grape Musts or Volatile Acidity in Wines 123
- 6.2.1 Reduction of Malic Acid in Musts 123
- 6.2.2 Reduction of Volatile Acidity 123
- 6.3 Acidification of Musts and Wines 125
- 6.4 Other Potential Applications 126
- References 127
  
- 7 Membrane Emulsification for Food Applications 129**  
*Henelyta S. Ribeiro, Jo J. M. Janssen, Isao Kobayashi, and Mitsutoshi Nakajima*
- 7.1 Introduction 129
- 7.1.1 Cross-Flow Membrane Emulsification (XME) 130
- 7.1.2 Dead-End Membrane Emulsification (PME) 131
- 7.1.3 Rotating Membrane Emulsification (RME) 131
- 7.1.4 Vibrating Membrane Emulsification (VME) 132
- 7.1.5 Microchannel Emulsification 133
- 7.2 Understanding of the Process at the Pore Level 134
- 7.2.1 XME 134
- 7.2.2 PME 137
- 7.2.3 MCE 138
- 7.3 Production of Structured Systems for Food Applications 140
- 7.3.1 O/W Emulsions 140
- 7.3.1.1 Membrane Emulsification 140
- 7.3.1.2 Microchannel Emulsification 141
- 7.3.2 W/O Emulsions 144
- 7.3.2.1 Membrane Emulsification 144
- 7.3.2.2 Microchannel Emulsification 145
- 7.3.3 W/O/W Emulsions 147
- 7.3.3.1 Membrane Emulsification 147
- 7.3.3.2 Microchannel Emulsification 149
- 7.4 Encapsulation of Active Molecules 149
- 7.4.1 Membrane Emulsification 149

7.4.2	Microchannel Emulsification	151
7.5	Assessment of the Potential Benefits of Membrane Emulsification in Foods	151
7.5.1	DSD and Product Stability	152
7.5.1.1	Physical Stability	152
7.5.1.2	Chemical Stability	153
7.5.1.3	Microbiological	153
7.5.2	DSD and Product Rheology	153
7.5.2.1	Yield Stress	154
7.5.2.2	Elastic Modulus	155
7.5.2.3	Viscosity	155
7.5.2.4	Formation of Flocculated Networks	155
7.5.3	Product Properties Related to Low-Shear Processing	156
7.5.3.1	Shear Damage to Ingredients	156
7.5.3.2	Effect on Product Structure	157
7.5.4	Summary	157
7.6	Conclusions	158
	References	158

## Contents

**Preface** *XI*

**List of Contributors** *XIII*

<b>1</b>	<b>Fundamentals of Fouling</b>	<b>1</b>
	<i>Robert Field</i>	
1.1	Introduction	1
1.2	Concentration Boundary Layer	2
1.3	Modeling Ultrafiltration in the Absence of Fouling	4
1.4	Modeling Membrane Filtration in the Presence of Fouling	6
1.5	Fouling Overview: its Nature and Key Influences	9
1.6	Modeling of Fouling	11
1.7	Prevention and Reduction of Fouling	15
1.8	Reverse Osmosis and Fouling	17
1.9	Fouling in Ultrafiltration and Microfiltration	18
1.10	Fouling in Pervaporation and Gas Separation	20
1.11	Concluding Remarks	21
	References	22
<b>2</b>	<b>Biofouling in Membrane Systems</b>	<b>25</b>
	<i>Vicki Chen, Jaleh Mansouri, and Tim Charlton</i>	
2.1	Introduction	25
2.2	Biofouling: Definition, Formation, and Impact on Membrane Performance	26
2.2.1	Biofouling in Membrane Bioreactors	27
2.2.2	Biofouling in Reverse Osmosis and Nanofiltration Treatment Trains	28
2.2.3	Biofouling in Other Membrane Systems	30
2.3	Assessment, Visualization, and Monitoring	30
2.3.1	Chemical Analysis	31
2.3.2	Optical and Electron Microscopy	32

2.3.3	Microorganism Community Analysis	33
2.3.4	Biofouling Monitoring and Visualization (Online or <i>In Situ</i> )	40
2.4	Strategies for Controlling Biofouling	41
2.4.1	Feed Pretreatment (Biocides and Nutrient Removal)	41
2.4.2	Cleaning	43
2.4.3	Membrane Selection and Modification	44
2.5	Future Developments and Conclusion	47
	References	48

**3 Current and Emerging Membrane Processes for Water Treatment 53**

*Jean-Christophe Schrotter and Bengu Bozkaya-Schrotter*

3.1	Introduction	53
3.2	Global Assessment and Forecast of the Water Treatment Membrane Market	54
3.3	Membrane Products and Processes	55
3.3.1	Reverse Osmosis and Nanofiltration Systems	55
3.3.1.1	Flux, Pressure, and Feed Recovery Rate	56
3.3.1.2	Removal of Emerging Pollutants	56
3.3.1.3	Integrity Monitoring	57
3.3.1.4	Concentrate Treatment	57
3.3.1.5	Recent Technological Improvements	61
3.3.2	Microfiltration and Ultrafiltration Systems	64
3.3.2.1	Microfiltration and Ultrafiltration Pore Size	65
3.3.2.2	Membrane Material Type	65
3.3.2.3	Hollow Fiber versus Plate-and-frame Membrane	69
3.3.2.4	Submerged versus Pressurized Membrane Systems	70
3.3.2.5	Inside-Out versus Outside-In Flow	72
3.3.2.6	Flux and Feed Recovery Rate	72
3.3.2.7	Cleaning Methods	73
3.3.2.8	Integrity Monitoring	74
3.4	Membrane Fouling	75
3.4.1	Autopsy	75
3.4.2	Membrane Chemical Cleaning or Cleaning-in-Place	77
3.4.3	Global Measurement of Fouling Potential	78
3.4.3.1	Modified Fouling Index and Mini Plugging Fouling Index	79
3.4.3.2	Modified Fouling Index – Ultrafiltration	80
3.5	Membrane Process Integration in Water Treatment	81
3.5.1	Membrane Pretreatment	81
3.5.2	Hybrid Membrane Process	82
3.5.2.1	Membrane Bioreactor	82
3.5.2.2	Powder-Activated Carbon–Membrane Hybrid Systems	84
3.5.2.3	Ozonation Membrane Hybrid System	84
3.5.3	Examples of Successful Integration	85
3.6	Conclusions	87
	References	88
