

## CONTENTS

	Page
Preface	iii
1. Design Criteria in Water Treatment Processes	1
2. Use of Chlorine Dioxide	31
3. Oxidation with Ozone	67
4. Ultraviolet Disinfection of Water	123
5. Coagulation	165
6. Use of Polymerized Aluminum Flocculants	191
7. Flocculation	205
8. Activated silica as a Flocculation Aid	219
9. Combined Coagulation – Flocculation – clarifying Processes	245
10. Lamellar and Tubular Assisted settling Processes	265
11. Testing Methods for Operational control of unit Processes	283
12. Adsorption	321
13. Principles of Microbial growth and Decay	365
14. Filtration Powders and Diatomaceous Earths	397
15. Softening and Mineralization	425
16. Treatment Processes of Aluminum-Based Sludge	471
17. Mixing Practice in Water Treatment	499
18. Sand for Filtration in water quality control : criteria and Mode of Action	529
19. Reagents for Water Treatment	565
Index	631
