

CONTENTS

Preface	xiii
1. Overview : role of activated carbon in EPA's regulatory program	1
THEORETICAL APPROACHES	
2. Adsorption of multicomponent liquids from water onto activated carbon : convenient estimation methods	9
3. Selective adsorption of organic homologues onto activated carbon from dilute aqueous solutions : solvophobic interaction approach – branching and predictions	29
4. Theory of correspondence for adsorption from dilute solutions on heterogeneous adsorbents	63
5. Physicochemical aspects of carbon affecting adsorption from the aqueous phase	77
6. Effect of surface characteristics of activated carbon on the adsorption of chloroform from aqueous solution	95
Discussion I: theoretical approaches	107
MODELING AND COMPETITIVE ADSORPTION ASPECTS	
7. Removal of carbon tetrachloride from water by activated carbon	121
8. Recent advances in the calculation of multicomponent adsorption in fixed beds	167
9. Controlling mechanisms for granular activated-carbon adsorption columns in the liquid phase	201
10. Evaluation of activated carbon by the dynamic minicolumn adsorption technique	213
11. Adsorption equilibria in multisolute mixtures of known and unknown composition	247
discussion II: modeling and competitive adsorption aspects	269
BIOLOGICAL/ADSORPTIVE INTERACTIONS	
12. Comparison of adsorptive and biological total organic carbon removal by granular activated carbon in potable water treatment	279
13. Pilot-scale evaluation of ozone – granular activated carbon combinations for trihalomethane precursor removal	303
14. Interaction of adsorption and bioactivity in full-scale activated-carbon filters : the mont valerien experiment	319
15. Microbial population dynamics on granular activated carbon used for treating surface impounded groundwater	337
16. Mathematical description of the microbial activity in a batch system of activated carbon, phenol, and <i>arthrobacter</i> strain 381	355
Discussion III: biological/adsorptive interactions	373

PILOT- AND LARGE-SCALE STUDIES

17. Experimental error estimates associated with pilot activated-carbon investigations of trace organic removals	383
18. Experimental studies of distribution profiles of organic and inorganic substances adsorbed on fixed beds of granular activated carbon	407
19. Pilot plant study on the use of chlorine dioxide and granular activated carbon	425
20. Comparison of the removal of halogenated and other organic compounds by six types of carbon in pilot filters	455
21. A comparison of granular activated carbon and a carbonaceous resin for removal of volatile halogenated organics from a groundwater	481
22. Dynamic behavior of organics in full-scale granular activated-carbon columns	503
23. Experiences in operating a full-scale granular activated-carbon system with on-site reactivation	525
discussion IV: Pilot- and large-scale studies	565
 index	 573
