

Contents

Notation	ix
Preface	xii
Acknowledgements	xiii
Chapter 1 A very general introduction	
Characteristics of life	1
The first and second laws of thermodynamics	2
Energy resources	3
The hydrological cycle	4
Water supply and demand	5
Water quality standards	5
Desalination processes and their applicability	8
Process summary	10
Electrodialysis	10
Reverse osmosis	10
Freezing	11
Distillation	12
Chapter 2 Fundamentals	14
Introduction	14
Heat transfer	15
Heat transfer surface and performance ratio	18
Boiling point elevation	20
Pressure-drop losses	22
Hydrostatic head effects	22
The second law of thermodynamics	23
Flash range	24
References	24
Chapter 3 The control of scale and corrosion	25
Introduction	25
Composition and properties of typical raw feed-water	25

Alkaline scales	27
Methods of scale control	30
Calcium sulphate scaling	34
Feed treatment selection	38
Corrosion/erosion processes	38
General corrosion	39
Galvanic corrosion	39
Localised corrosion	40
Impingement and cavitation corrosion	40
Corrosion caused by polluted sea water	40
Bacterial corrosion	41
Sulphate reducers	41
Corrosion prevention	42
References	48

Chapter 4 Multi-stage flash distillation	50
Introduction	50
The submerged coil evaporator	52
Multi-stage flash principles	53
Stage number effect	56
Losses	61
Equilibration	61
Flash plant layout and construction	65
Heat recovery section	66
Heat rejection section	68
Pumps and auxiliaries	69
Air ejector	70
Brine heater	70
Plant operation	71
Summary	73
References	74

Chapter 5 Multiple-effect distillation	76
Introduction	76
VTE multiple-effect distillation—flow-sheet	77
Analysis of multiple-effect distillation	79
Fluted tubes	82
Flow distribution	86
Horizontal tube evaporator: multiple-effect evaporator (HTE)	87
Multiple-effect plant layout and operation	89
Scaling in VTE plants	91
Present position	91
References	93

Chapter 6	Miscellaneous processes	94
	Introduction	94
	Vapour compression distillation	94
	Solar distillation	97
	Principle of solar distillation	97
	Still construction	98
	Performance	103
	Low temperature difference distillation	104
	Controlled flash evaporation (CFE)	106
	Non-metallic heat transfer surfaces	107
	Summary	111
	References	111
Chapter 7	Part A. Conjunctive use of desalination and conventional water resources	113
	Preface by author	113
	Introduction	113
	The economics of conjunctive use	114
	Conjunctive desalination	115
	Conjunctive use of desalination with a short critical period reservoir	115
	Conjunctive use of desalination with a long critical period reservoir	117
	Conjunctive use of desalination under conditions of restricted plant operation	120
	Conjunctive use with vapour compression distillation	121
	The future potential of conjunctive desalination	122
	The impact of low load factor operation upon desalination plant design	123
	Corrosion	123
	Product water quality	124
	Plant life-time	124
	Computational procedure	125
	Generation of operating rules	126
	Desalination plant size	128
	Part B. The treatment of desalinated water for domestic use	129
	Introduction	129
	Corrosion mechanisms	129
	Corrosion control	130
	References	135
Chapter 8	Combined power and water production	136
	Introduction	136
	Combination plants	136
	Nuclear power and desalting plants	138
	Cost allocation	140
	Gas turbine dual-purpose plants	143
	Total Energy and postscript	145
	References	147
	Index	149
