

CONTENTS

	Page
Preface	vii
1. Review of distillation Processes for the Recovery of Fresh Water from Saline Waters	1
2. Recovery of Minerals from Sea Water by Phosphate Precipitation	27
3. Minimizing Scale Formation in Saline Water Evaporators	40
4. Saline Water Distillation-Scaling Experiments Using the spray Evaporation Technique	52
5. Effect of Vibration on Heat Transfer and Scaling in Saline Water Conversion	65
6. Saline Water Conversion using Wiped Thin-Film Distillation	78
7. Saline Water conversion by the Diffusion Still	86
8. Saline Water conversion by Flash Evaporation Utilizing solar Energy	99
9. Sea Water Demineralization by Means of an Osmosis Membrane	117
10. Operating Experience on a Large Scale Electrodialysis water-Demineralization Plant	133
11. Design of Medium-to-Large Electrodialytic Water Demineralizers-several Hundred Thousand to several Million Gallons per Day	158
12. Economics of Dimineralization by Electrodialysis	168
13. Saline Water conversion research in Israel	179
14. Properties of the hydrates of Fluorocarbons 142b and 12B1. Comparison of Six Agents for use in the Hydrate Process	190
