

CONTENTS

Introduction	1
Comparison of Microbial Transformation Rate Coefficients of Xenobiotic Chemicals Between Field-Collected and Laboratory Microcosm Microbiota	3
Comparison of Environmental Effects and Biotransformation of Toxicants on Laboratory Microcosm and Field Microbial Communities	14
Use of a Three-Phase Microcosm for Analysis of Contaminants Stress on Aquatic Ecosystems	31
Realism and Replicability of Lentic Freshwater Microcosms	43
Comparison of Laboratory Microcosms and Field Responses to Copper	57
Effects of Atrazine on Community Level Responses in Taub Microcosms	75
Experimental Ponds for Evaluating Bioassay Predictions	91
Calibration of Laboratory Bioassays with Results from Microcosms and Ponds	104
Comparison of Laboratory and Field Assessment of Fluorene Part I : Effects of Fluorene on the Survival, Growth, Reproduction, and Behavior of Aquatic Organisms in Laboratory Tests	120
Comparison of Laboratory and Field Assessment of Fluorene Part II : Effects on the Ecological Structure and Function of Experimental Pond Ecosystems	134
Sediment Toxicity, Contamination, and Macrobenthic Communities Near a Large Sewage Outfall	152
Models for Predicting the Fate of Synthetic Chemicals in Aquatic Ecosystems	176
The Concept of Prognostic Model Assessment of Toxic Chemical Fate	191
A Framework for the Complementary Use of Mathematical Models and Microcosms in Environmental Assessment	204
Effects of Atrazine on Aquatic Ecosystems : A Physical and Mathematical Modeling Assessment	212
Summary	225
Index	229
